# DIGITAL VIDEO RECORDER

User's Manual

V1.4.0

#### General

This user's manual (hereinafter referred to be "the Manual") introduces the functions and operations of the DVR devices (hereinafter referred to be "the Device").

#### Models

Smart 1U, E Model, Compact 1U, Mini 1U, Cooper 1U, 1U, 1.5U, 2U

#### Safety Instructions

The following categorized signal words with defined meaning might appear in the Manual.

Signal Words	Meaning
	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
© TIPS	Provides methods to help you solve a problem or save you time.
	Provides additional information as the emphasis and supplement to the text.

#### **Revision History**

Version	Revision Content	Release Time

Version	Revision Content	Release Time	
	1. Adding three models;		
V1.4.0	2. Replace two PoC images and	July 2019.	
	updates some descriptions.		
	Update safety baseline functions.		
	1. Matching language		
	automatically during		
	initialization; changing GMT		
	time zone to UTC time zone;		
	matching PAL and NTSC		
	automatically;		
	2. Password on the local login		
	interface is displayed with		
	plaintext;		
	3. Reboot is not required after		
	service port number is changed;		
V1.3.0	<ol> <li>Adding record control tab;</li> </ol>	January 16, 2019	
	5. Adding encoding enhancement		
	function;		
	6. Adding 802.1x access		
	certification and firewall		
	function;		
	7. Adding TV adjustment function;		
	• •		
	<ol> <li>Adding POS function at web;</li> <li>E model pushes battery status</li> </ol>		
	to mobile phone;		
	10. Combine the channel info and		
	POC info interface;		
	1. Add four models.		
V1.2.2		November 23, 2018	
		-	
V1.2.1	Add one model	September 20, 2018	
	1. Add fourteen models.		
	2. Update following sections:		
V1.2.0	$\diamond$ Important Safeguards and	July 20, 2018	
	Warnings		
	Initializing the Device		
	♦ Configuring POS Settings		
	1. Add four models.		
	2. Add following sections:		
	Regulatory Information		
	Privacy Protection Notice		
V1.1.0	$\diamond$ Using Reset Button on the	June 10, 2018	
	Mainboard		
	♦ Configuring White Light		
	♦ Configuring Siren		
	$\diamond$ Viewing PoC Information

	Important Safeguards and	
	Warnings	
	♦ Configuring IVS Function	
	♦ Configuring Face Detection	
V1.0.1	Add eight models.	March 27, 2018
V1.0.0	First Release.	February 27, 2018

#### Privacy Protection Notice

As the device user or data controller, you might collect personal data of others such as face, fingerprints, car plate number, Email address, phone number, GPS and so on. You need to be in compliance with the local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures include but not limited to: providing clear and visible identification to inform data subject the existence of surveillance area and providing related contact.

#### About the Manual

- The manual is for reference only. If there is inconsistency between the manual and the actual product, the actual product shall prevail.
- We are not liable for any loss caused by the operations that do not comply with the manual.
- The manual would be updated according to the latest laws and regulations of related regions. For detailed information, see the paper manual, CD-ROM, QR code or our official website. If there is inconsistency between paper manual and the electronic version, the electronic version shall prevail.
- All the designs and software are subject to change without prior written notice. The product updates might cause some differences between the actual product and the manual. Please contact the customer service for the latest program and supplementary documentation.
- There still might be deviation in technical data, functions and operations description, or errors in print. If there is any doubt or dispute, please refer to our final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and the company names in the manual are the properties of their respective owners.
- Please visit our website, contact the supplier or customer service if there is any problem occurred when using the device.
- If there is any uncertainty or controversy, please refer to our final explanation.

## Important Safeguards and Warnings

This Chapter describes the contents covering proper handling of the Device, hazard prevention, and prevention of property damage. Read these contents carefully before using the Device, comply with them when using, and keep it well for future reference.

#### **Operation Requirement**

- Do not place or install the Device in a place exposed to sunlight or near the heat source.
- Keep the Device away from dampness, dust or soot.
- Keep the Device installed horizontally on the stable place to prevent it from falling.
- Wall-mounting is not supported.
- Do not drop or splash liquid onto the Device, and make sure there is no object filled with liquid on the Device to prevent liquid from flowing into the Device.
- Install the Device in a well-ventilated place, and do not block the ventilation of the Device.
- Operate the device within the rated range of power input and output.
- Do not dissemble the Device.
- Transport, use and store the Device under the allowed humidity and temperature conditions.

#### **Electrical Safety**

- Use the battery of specified manufacturer; otherwise there might result in explosion. When replacing battery, make sure the same type is used. Improper battery use might result in fire, explosion, or inflammation.
- Follow the instructions to dispose of the used battery.
- Use the recommended power cables in the region and conform to the rated power specification.
- Use the power adapter provided with the Device; otherwise, it might result in people injury and device damage.
- The power source shall conform to the requirement of the Safety Extra Low Voltage (SELV) standard, and supply power with rated voltage which conforms to Limited power Source requirement according to IEC60950-1. Please note that the power supply requirement is subject to the device label.
- Connect the device (I-type structure) to the power socket with protective earthing.
- The appliance coupler is a disconnection device. When using the coupler, keep the angle for easy operation.

## 1.1 Overview

The Device is an excellent digital monitor product for security industry. The embedded LINUX OS assures the stable operation. The H.265 and G.711 technologies assure the high quality image and low bit stream. The frame-by-frame play function displays more details for analysis, and provides the functions such as record, playback, and monitor and assures the synchronization for audio and video. The Device also adopts the advanced control technology and great network data transmission capability.

The Device adopts embedded design to achieve high security and reliability. It can work in the local end and, with strong networking capability it can get connected to the professional surveillance software (Smart PSS) to form a security network to show its powerful remote monitoring function.

The Device is applicable to the areas such as bank, telecom, electricity, traffic, intelligent residential district, factory, warehouse, resources, and water conservancy facilities.

## **1.2 Functions**

#### $\square$

The functions might be different depending on the software and hardware version of the model you purchased.

#### **Smart Detection**

- Smart detection: Effectively detect persons and motor vehicles in the video.
- Face detection: Effectively recognize faces in the video, analyze and carry out structured storage of faces, and search faces quickly.
- Analyze IVS, carry out tripwire and zone intrusion analysis of persons and vehicles, and effectively filter false report caused by tree leaves, rain and brightness changes.

#### **Real-time Surveillance**

- Support VGA port and HDMI port to realize the surveillance through monitors.
- Support HDMI, VGA, and TV output at the same time.

#### **IoT Management**

Provide specific management module for IoT features including humidity and temperature data reports and alarms linkage.

#### **Sensor Integration**

Integrate coaxial cameras with diverse array of sensors such as temperature, humidity and wireless alarm devices.

#### Storage Management

Special data format to guarantee data security and avoid the risk of modifying data viciously.

• Support digital watermark.

#### **Compression Format**

Support multiple-channel audio and video signal. An independent hardware decodes the audio and video signal from each channel to maintain video and audio synchronization.

#### **Backup Function**

- Support backup operation through USB port (such as USB storage disk, portable HDD, and burner).
- Client-end user can download the file from local HDD through network to backup.

#### **Record & Playback**

- Support each channel real-time record independently, and simultaneously support the functions such as search, backward play, network monitor, record search, and download.
- Support various playback modes: slow play, fast play, backward play and frame by frame play.
- Support time title overlay so that you can view event accurate occurred time.
- Support zooming in the selected area in the live view.

#### **Network Operation**

Support network remote real-time monitor, remote record search and remote PTZ control.

#### **Alarm Activation**

- Several relay alarm outputs to realize alarm activation and on-site light control.
- The alarm input port and output port have the protection circuit to guarantee the Device safety.

#### **Communication Port**

- RS-485 port can realize alarm input and PTZ control.
- RS-232 port can connect to keyboard, COM port of PC or the matrix control.
- Standard Ethernet port can realize network remote access function.
- The dual-network port has the multi-address, fault tolerance, load balance setup mode.

#### PTZ Control

Support PTZ decoder through RS-485 port.

#### **Intelligent Operation**

- Support mouse operation function.
- Support "copy and paste" function for the same settings.

#### UPnP (Universal Plug and Play)

Establish mapping connection between LAN and WAN through UPnP protocol.

#### **Camera Self-adaptive**

Auto-recognize and work with the PAL or NTSC camera and HD camera.

# 2 Getting Started

## 2.1 Checking the Components

#### $\square$

The actual appearance, component, or quantity might be different depending on the model you purchased.

When you receive the Device, please check against the following checking list. If any of the items are missing or damaged, contact the local retailer or after-sales engineer immediately.

Sequence	Checking items		Requirement
		Appearance	No obvious damage.
1	Package	Packing materials	No broken or distorted positions that could be caused by hit.
2	Labels	Labels on the device	Not torn up. Do not tear up or throw away the labels; otherwise the warranty services are not ensured. You need to provide the serial number of the product when you call the after-sales service.
		Appearance	No obvious damage.
3	Device	Data cables, power cables, fan cables, mainboard	No connection loose.

## 2.2 Installing HDD

Please check whether the HDD is already installed in the Device when you first time using the Device. It is suggested to use the HDD recommended officially. Do not use the PC HDD.

Shut down the device and then unplug the power cable before you open the case to replace the HDD.

## 2.2.1 Smart 1U

1. Remove the screws to take 2. Fix the screws on the HDD off the cover.

but do not fasten them.

4. Turn the DVR upside down to see the screws and then fasten them.

5. Use the HDD cable and power cable to connect HDD and mainboard.

3. Match the screws with the holes on the DVR to place the HDD.

6. Put back the cover and fasten the screws.

### 2.2.2 E Model

#### 2.2.2.1 Installing Battery

The battery is only provided with some models.

- 1. Pull the battery cable through the hole.
- 2. Connect to the cable into the port.

#### 2.2.2.2 Installing HDD

 $\square$ 

Skip step 6 if the battery is not equipped with the model you purchased.

1. Remove the screws to take off the cover.

4. Match the holes on the bracket with the screw holes on HDD.

2. Remove the screws to take off the bracket.

5. Use screws to fix the HDD onto the bracket.

3. Put the HDD onto the bracket.

 (Optional) Pull the battery cable through the hole to connect into the cable port.

 Use the HDD cable and power cable to connect HDD and mainboard.

 Install the bracket back and then fasten the screws.

9. Put back the cover and fasten the screws.

## 2.2.3 MINI 1U and Compact 1U

 Remove the screws on the 2. rear panel.

2. Fix the screws on the HDD, but do not be fastened.

3. Place the HDD onto the Device.

- Turn the device to see the back side of it. Align the screws of the HDD with the holes on the back of the device, and then fix the screws.
- 5. Use the HDD cable and power cable to connect HDD and mainboard.
- 6. Put back the cover and fix the screws.

### 2.2.4 Cooper 1U

1. Remove the screws on the cover.

 Turn the Device upside down and then fasten the screws.

 Connect HDD cable and power cable to HDD, and fasten the screws in HDD.

5. Connect the HDD cable and the power cable to the mainboard.

 Align the screws of the HDD with the holes on the back of the device.

6. Put back the cover and fasten the screws.

## 2.2.5 1U

1. Remove the screws on the cover.

 Fix the screws onto the HDD, but do not be fastened.

 Put the HDD into the Device.

 Turn the device to see the back side of it. Align the screws of the HDD with the holes on the back of the device, and then fix the screws.

 Use the HDD cable and power cable to connect HDD and mainboard.

6. Put back the cover and fix the screws.

#### 2.2.6 1.5U

1. Remove the screws on cover.

 Connect the other end of HDD cable to the mainboard.

2. Use the screws to fix the HDD onto the bracket.

5. Use the power cable to

connect HDD and

mainboard.

-initian -

 Connect one end of HDD cable to the HDD.

6. Put back the cover and fix the screws.

## 2.2.7 2U

1. Remove the screws on the cover.

 Fix the HDD(s) onto the bracket. Remove the top bracket if you want to

3. Connect one end of HDD cable to the HDD.

## install HDD to the bottom bracket.

 Connect the other end of HDD cable to the mainboard.

5. Use the power cable to connect HDD and mainboard.

6. Put back the cover and fix the screws.

## 2.3 Installing Device into Rack

#### $\square$

Only 1.5U and 2U Devices support this installation.

To install the DVR into rack, do the following:

- <u>Step 1</u> Check whether the in-house temperature is lower than  $35^{\circ}$  ( $95^{\circ}$ F) and make sure the 15 cm (6 inches) spacing around the Device for ventilation.
- <u>Step 2</u> Use six screws to fix the DVR on each side.
- Step 3 Install from the bottom up.

If you want to install more accessories to the rack, take preventive measures to avoid power socket overload.

<u>Step 4</u> (Optional) Install more accessories to the rack if needed.

# **3** The Grand Tour

This chapter introduces various components of the Device, remote control and mouse operations.

## **3.1 Front Panel**

## 3.1.1 Smart 1U

Table 3-1

lcon	Name	Function	
		• The indicator is off when the HDD is running normally.	
0	HDD status indicator	• The indicator glows blue when the HDD is in	
		malfunction.	
		• The indicator is off when the power is connected	
ധ	Power status	abnormally.	
U	indicator	• The indicator glows blue when the power is connected	
		normally.	
		• The indicator is off when the network connection is	
品	Network status	correct.	
	indicator	• The indicator glows blue when the network connection	
		is abnormal.	

#### 3.1.2 E Model

Figure 3-2

Table 3-2
-----------

No.	Button/Icon	Function	
1	Power	Turns on/off the DVR. The indicator glows blue when the DVR is turned on.	
2	HDD status indicator	The indicator glows blue when the HDD is in malfunction.	
3	Network status indicator	The indicator glows blue when the network connection is abnormal.	
4,5,6	Battery status indicator	<ul> <li>When the battery remains full or no less than sixty percent, the No.4 indicator is on, and the No.5 and No.6 are out.</li> <li>When the battery remains between thirty percent and sixty percent, the No.5 indicator is on and the others are out.</li> <li>When the battery remains between one percent and thirty percent, the No.6 indicator is on and the others are out.</li> <li>When the battery is exhausted, the DVR is turned off, or there is no battery attached to the DVR, all the three indicators are out.</li> </ul>	
7	USB port	Connects to external devices such as USB storage device, keyboard, and mouse.	

## 3.1.3 Compact 1U

Figure 3-3

Table 3-3

No.	Port Name	Function
1	HDD	Glows blue when HDD status is abnormal.
2	NET	Glows blue when network status is abnormal.

No.	Port Name	Function
3	POWER	Glows blue when the power is connected properly.
4	USB port	Connects to peripheral devices such as USB storage device, keyboard, and mouse.

## 3.1.4 MINI 1U

Figure 3-4

Table 3-4

No.	Port Name	Function
1	HDD	Glows blue when HDD status is abnormal.
2	NET	Glows blue when network status is abnormal.
3	POWER	Glows blue when the power is connected properly.
4	USB port	Connects to peripheral devices such as USB storage device, keyboard, and mouse.

## 3.1.5 Cooper 1U

Figure 3-5

## 3.1.6 1U

Figure 3-6

Table 3-5

No.	Port Name	Function
1	Status indicator light	Glows blue when the device is working properly.
2	HDD	Glows blue when HDD status is abnormal.
3	NET	Glows blue when network status is abnormal.
4	POWER	Glows blue when the power is connected properly.
5	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.

## 3.1.7 1.5U

Figure 3-7

Table 3-6

No.	Port Name	Function
1	Status indicator light	Glows blue when the device is working properly.
2	HDD	Glows blue when HDD status is abnormal.
3	NET	Glows blue when network status is abnormal.
4	POWER	Glows blue when the power is connected properly.
5	USB port	Connects to peripheral devices such as USB storage device, keyboard, and mouse.

## 3.1.8 2U

No.	Port Name	Function
1	Status indicator light	Glows blue when the device is working properly.

No.	Port Name	Function
2	HDD	Glows blue when HDD status is abnormal.
3	NET	Glows blue when network status is abnormal.
4	POWER	Glows blue when the power is connected properly.
5	USB port	Connects to peripheral devices such as USB storage device, keyboard, and mouse.

## 3.2 Rear Panel

## 3.2.1 Smart 1U

Figure 3-9

Table 3-8

No.	Port Name	Function
1	Video input port	Connects to analog camera to input video signal.
2	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
3	VGA port	Outputs analog video data to the connected display with VGA port.
4	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi-channel audio data to the connected display with HDMI port.
5	Network port	Connects to Ethernet port.
6	Power input port	Inputs 12V DC power.
7	<b>(</b>	Ground terminal.

## 3.2.2 E Model

Figure 3-10

Table 3-9

No.	Port Name	Function
1	Video input port	Connects to analog camera to input video signal.
2	Audio input port	Receives audio signal output from the devices such as microphone.
3	Audio output port	Outputs audio signal to the devices such as the sound box.
4	RS-485 communication port	Connects to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
5	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi-channel audio data to the connected display with HDMI port.
6	VGA port	Outputs analog video data to the connected display with VGA port.
7, 8	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
9	Network port	Connects to Ethernet port.
10	Power input port	Inputs12V DC power.
11	Power output port	Outputs 12V DC power.

No.	Port Name	Function
12	Ground	Ground terminal.

## 3.2.3 Compact 1U

#### Table 3-10

No.	Port Name	Function
1	Video input port	Connects to analog camera to input video signal.
2	Audio input port	Receives audio signal output from the devices such as microphone.
3	Audio output port	Outputs audio signal to the devices such as the sound box.
4	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi-channel audio data to the connected display with HDMI port.
5	Network port	Connects to Ethernet port.
6	RS-485 communication port	Connects to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
7	VGA port	Outputs analog video data to the connected display with VGA port.
8	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
9	Power input port	Inputs 12V DC power.
10	Power cable fastener	Use clamp to secure the power cable on the DVR in case there is any loss.
11	<b>\</b>	Ground terminal.

## 3.2.4 MINI 1U

Figure 3-13

Table 3-11	
------------	--

No.	Port Name	Function
1	Alarm input port 1–16	Four groups of alarm input ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types: NO (Normally Open) and NC (Normally Closed).
	Alarm output port 1–3 (NO1–NO3; C1–C3)	<ul> <li>Three groups of alarm output ports (Group 1: port NO1–C1, Group 2: port NO2–C2, Group 3: port NO3–C3). These ports output alarm signal to the alarm device. Please make sure power supply to the external alarm device.</li> <li>NO: Normally open alarm output port.</li> <li>C: Alarm output public end.</li> </ul>
	Ŧ	Ground.
2	Video input port	Connects to analog camera to input video signal.
3	Audio input port	Receives audio signal output from the devices such as microphone. It corresponds to video input port 1.
4	DB25 port	Connects to the audio splitter taken from the package to convert to audio input port which receives the audio signal from devices such as microphone. It corresponds to video input ports 2–16.
5	Audio output port	Outputs audio signal to the devices such as the sound box.
6	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi-channel audio data to the connected display with HDMI port.
7	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
8	Network port	Connects to Ethernet port.
9	RS-485 communication port	Connects to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.

No.	Port Name	Function
10	Power input port	Inputs 12V DC power.
11	VGA port	Outputs analog video data to the connected display with VGA port.
12	Power button	Turns on/off the DVR.
13	Power cable fastener	Use a cable tie to secure the power cable on the DVR to prevent loss.
14	<b>e</b>	Ground terminal.

#### Table 3-16

No.	Port Name	Function
1	<b>\</b>	Ground terminal.
2	Power input port	Inputs power.
3	Power button	Turns on/off the DVR.
4	Audio input port	Receives audio signal output from the devices such as microphone.
5	Audio input port (MIC IN)	Tow-way talk input port which receives analog audio signal output from the devices such as microphone and pickup.
6	Audio output port (MIC OUT)	Tow-way talk output port which outputs the analog audio signal to the devices such as the sound box.
7	Audio output port	Outputs audio signal to the devices such as the sound box.
8	Video output port	Connects to video output devices such as TV.
9	Video input port	Connects to analog camera to input video signal.
10	Alarm input port 1–16	Four groups of alarm input ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types: NO (Normally Open) and NC (Normally Closed).

No.	Port Name	Function
	Alarm output port 1–5 (NO1–NO5; C1–C5; NC5)	<ul> <li>Five groups of alarm output ports (Group 1: port NO1– C1,Group 2: port NO2–C2, Group 3: port NO3–C3, Group 4: port NO4–C4, Group 5: port NO5, C5, NC5). These ports output alarm signal to the alarm device. Please make sure power supply to the external alarm device.</li> <li>NO: Normally open alarm output port.</li> <li>C: Alarm output public end.</li> <li>NC: Normally closed alarm output port.</li> </ul>
	RS-485 communication port	Connects to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
	Four-wire full-duplex RS-485 port (T+, T-, R+, R-)	Four-wire full-duplex 485 port. T+ and T- is the output wire; R+ and R- is the input wire.
	Power output control for alarm (CTRL 12V)	<ul> <li>Controls the 6<sup>th</sup> channel power output for alarm.</li> <li>Turns off power output when there is alarm output.</li> <li>Turns on power output when the alarm is cleared.</li> </ul>
	12V power output port	Provides power to external devices such as camera and alarm device. Please note the power supply shall be below 1A.
	<del>上</del>	Ground.
10	Network port	Connects to Ethernet port.
12	VGA port	Outputs analog video data to the connected display with VGA port.
13	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi-channel audio data to the connected display with HDMI port. Resolution varies depending on different models.
14	RS-232 debug COM	The port is used for general COM debug to configure IP address or transfer transparent COM data.
15	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
16	eSATA port	External SATA port which connects to the device with SATA port. Perform the jumper configuration when connecting HDD.

## 3.2.8 2U

#### Figure 3-20

Table 3-17
------------

No.	Port Name	Function	
1	Audio output port	Outputs the analog audio signal to the devices such as the sound box.	
2	Video output port	Connect to video output devices such as TV.	
3	Audio input port (MIC IN)	Tow-way talk input port which receives the analog audio signal output from the devices such as microphone, pickup.	
4	Audio output port (MIC OUT)	Tow-way talk output port which outputs the analog audio signal to the devices such as the sound box.	
5	Audio input port	Receives the analog audio signal output from the devices such as microphone.	
6	Alarm input port 1–16	<ul> <li>Four groups of alarm output ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types; NO (Normally Open) and NC (Normally Closed).</li> <li>When your alarm input device is using external power, please make sure the device and the NVR have the same ground.</li> </ul>	
	Alarm output port 1–5 (NO1–NO5; C1–C5; NC5) RS-485 communication	<ul> <li>Five groups of alarm output ports. (Group 1: port NO1– C1,Group 2:port NO2–C2,Group 3:port NO3–C3, Group 4: port NO4–C4, Group 5: port NO5, C5, NC5). These ports output alarm signal to the alarm device. Please make sure power supply to the external alarm device.</li> <li>NO: Normally open alarm output port.</li> <li>C: Alarm output public end.</li> <li>NC: Normally closed alarm output port.</li> <li>You can connect to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B</li> </ul>	
	port Four-wire full-duplex RS-485 port (T+, T-, R+, R-)	is connected to the cable B. Four-wire full-duplex 485 port. T+ and T- is the output wire; R+ and R- is the input wire.	

No.	Port Name	Function
	Power output control for alarm (CTRL 12V)	Controls the 6 <sup>th</sup> channel power output for alarm. It is to control the on-off alarm relay output.
	12V power output port	Provides power to external devices such as camera and alarm device. Please note the supplying power shall be below 1A.
	G	Ground.
7	RS-232 debug COM.	It is for general COM debug to configure IP address or transfer transparent COM data.
8	VGA video output	Outputs analog video signal. It can connect to the monitor to view analog video.
9	Power button	Turns on/off the Device.
10	Power input port	Inputs power.
11	Loop out	Outputs the video signal of the corresponding video input port.
12	Video input port	Connect to analog camera to input video signal.
13	Network port	Connects to Ethernet port.
14	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
15	eSATA port	External SATA port which connects to the device with SATA port. Perform the jumper configuration when connecting HDD.
16	HDMI port	<ul> <li>High definition audio and video signal output port. It outputs the same video source as VGA. It supports 4K resolution output and supports mouse operation and control.</li> <li>Please note when the HDMI output resolution is 4K, the VGA output stops. Resolution varies depending on different models.</li> </ul>
17	GND	Ground.

## **3.3 Remote Control Operations**

#### 

-

The remote control is not our standard accessory and might not be included in the accessary bag. It is supplied dependent on the model you purchased.

Figure 3-21

No.	Name	Function
1	Power button	Press this button to boot up or shut down the device.
2	Address	Press this button to input device serial number, so that you can
		control the Device.
3	Forward	Multi-step forward speed and normal speed playback.
4	Slow motion	Multi-step slow motion speed or normal playback.
5	Next record	In playback state, press this button to play back the next video.
6	Previous record	In playback state, press this button to play back the previous video.
7	Play/Pause	<ul> <li>In normal playback state, press this button to pause playback.</li> <li>In pause state, press this button to resume to normal playback.</li> <li>In live view window interface, press this button to enter video search menu.</li> </ul>
8	Reverse/pause	In the reverse playback state, press this button to pause reverse playback. In the reverse playback pause state, press this button to resume to playback reversing state.
9	Esc.	Go back to previous menu or cancel current operation (close front interface or control).
10	Record	<ul> <li>Start or stop record manually.</li> <li>In record interface, use the direction buttons to select the channel that you want to record.</li> <li>Press this button for at least 1.5 seconds, and the manual record interface will be displayed.</li> </ul>

No.	Name	Function
11	Direction keys	Switch between current activated controls by going left or right. In playback state, the keys control the playback progress bar. Aux function (such as operating the PTZ menu).
12	Enter/menu key	<ul> <li>Confirms an operation.</li> <li>Go to the OK button.</li> <li>Go to the menu.</li> </ul>
13	Multiple-window switch	Switch between multiple-window and one-window.
14	Fn	<ul> <li>In single-channel monitoring mode, press this button to display the PTZ control and color setting functions.</li> <li>Switch the PTZ control menu in PTZ control interface.</li> <li>In motion detection interface, press this button with direction keys to complete setup.</li> <li>In text mode, press and hold this button to delete the last character. To use the clearing function: Long press this button for 1.5 seconds.</li> <li>In HDD menu, switch HDD recording time and other information as indicated in the pop-up message.</li> </ul>
15	Alphanumeric keys	<ul> <li>Input password, numbers.</li> <li>Switch channel.</li> <li>Press Shift to switch the input method.</li> </ul>

Table 3-18

## 3.4 Mouse Operations

 $\square$ 

The operations are based on the considerations for right-handed users. Table 3-19

Operation	Function
	Password input dialogue box pops up if you have not logged in yet.
	In live view window interface, you can go to the main menu.
	When you have selected one menu item, click it to view menu content.
	Implement the control operation.
Click left mouse	Modify check box or motion detection status.
button	Click combo box to pop up drop-down list.
	In text box, click the corresponding button on the panel to enter a numeral
	or English character (small/capitalized).
	In English input mode: Click      to enter a backspace and click
	to delete the previous character.

Operation	Function
	!?@#\$%=+*← 123 qwertyuiop/ 456 asdfghjkl:Enter 789 zxcvbnm,.Shift ↓0&
	<ul> <li>In numeral input mode: Click I to clear and click I to delete the</li> </ul>
	previous character.
	123 456 789 0 ↓ ←
	Implement special control operations such as double-click one item in the
Double-click left	file list to play back the video. In multiple-window mode, double-click one channel to view in full-window.
mouse button	Double-click current video again to go back to previous multiple-window mode.
Right-click	Right-click in live view window interface, the shortcut menu is displayed. For different series product, the shortcut menu may vary.
3	Exit current menu without saving the modification.
	In numeral input box: Increase or decrease numeral value.
Click scroll wheel button	Switch the items in the combo box.
	Page up or page down.
Point to select and move	Select current control and move it.
Dragging a selection box	Select motion detection zone.
selection box with left mouse button	Select privacy mask zone.

# **4** Connecting Basics

This chapter introduces the typical connection diagrams and ports connections.

# 4.1 Typical Connection Diagram

# 4.2 Connecting to Video and Audio Input and Output

## 4.2.1 Video Input

The video input interface is BNC. The input video format includes: PAL/NTSC BNC (1.0V<sub>P-P</sub>, 75 $\Omega$ ).

The video signal should comply with your national standards.

The input video signal shall have high SNR, low distortion; low interference, natural color, and suitable lightness.

#### Guarantee the stability and reliability of the camera signal

The camera shall be installed in a cool, dry place away from the conditions such as direct sunlight, inflammable, and explosive substances.

The camera and the DVR should have the same grounding to ensure the normal operation of the camera.

#### Guarantee stability and reliability of the transmission line

Please use high quality, sound shielded BNC. Please select suitable BNC model according to the transmission distance.

If the distance is too long, you should use twisted pair cable, and you can add video compensation devices or use optical fiber to ensure video quality.

You should keep the video signal away from the strong electromagnetic interference, especially the high tension current.

#### Keep connection lugs in well contact

The signal line and shielded wire should be fixed firmly and in well connection. Avoid dry joint, lap welding, and oxidation.

## 4.2.2 Video Output

Video output includes a BNC (PAL/NTSC1.0V<sub>P-P</sub>, 75 $\Omega$ ) output, a VGA output, and HDMI output. System supports BNC, VGA and HDMI output at the same time.

When you are using pc-type monitor to replace the monitor, please pay attention to the following points:

- To defer aging, do not allow the pc monitor to run for a long time.
- Regular demagnetization will keep device maintain proper status.
- Keep it away from strong electromagnetic interference devices.

Using TV as video output device is not a reliable substitution method. You also need to reduce the working hour and control the interference from power supply and other devices. The low quality TV may result in device damage.

## 4.2.3 Audio Input

This series of products audio input port adopt BNC port.

Due to high impedance of audio input, please use active sound pick-up.

Audio transmission is similar to video transmission. Try to avoid interference, dry joint, loose contact and it shall be away from high tension current.

# 4.2.4 Audio Output

The audio output signal parameter is usually over 200mv 1K $\Omega$  (BNC or RCA). It can directly connect to low impedance earphone, active sound box or amplifier-drive audio output device.

If the sound box and the pick-up cannot be separated spatially, it is easy to arouse squeaking. In this case you can adopt the following measures:

- Use better sound pick-up with better directing property.
- Reduce the volume of the sound box.
- Using more sound-absorbing materials in decoration can reduce voice echo and improve acoustics environment.
- Adjust the layout of speaker and pickup to reduce squeaking.

# 4.3 Connecting to Alarm Input and Output

Please read the followings before connecting.

#### Alarm input

- Make sure alarm input mode is grounding alarm input.
- Grounding signal is needed for alarm input.
- Alarm input needs the low level voltage signal.
- Alarm input mode can be either NC (Normally Closed) or NO (Normally Open).
- When you are connecting two DVRs or you are connecting one DVR and one other device, use a relay to separate them.

#### Alarm output

The alarm output port should not be connected to high power load directly (It shall be less than 1A) to avoid high current which might result in relay damage. Use the contactor to realize the connection between the alarm output port and the load.

#### How to connect PTZ decoder

- Ensure the decoder has the same grounding with DVR; otherwise the PTZ might not be controlled. Shielded twisted wire is recommended and the shielded layer is used to connect to the grounding.
- Avoid high voltage. Ensure proper wiring and some thunder protection measures.
- For too long signal wires, 120Ω should be parallel connected between A, B lines on the far end to reduce reflection and guarantee the signal quality.
- "485 A, B" of DVR cannot parallel connect with "485 port" of other device.
- The voltage between of A, B lines of the decoder should be less than 5V.

#### Make sure the front-end device has soundly earthed

Improper grounding might result in chip damage.

# 4.3.1 Introducing Alarm Port

 $\square$ 

The alarm input ports are dependent on the model you purchased.

Figure 4-3

Table 4-1

Icon	Description
1, 2, 3, 4, 5, 6,         7, 8, 9, 10, 11,         12, 13, 14, 15, 16    ALARM 1 to ALARM 16. The alarm becomes active in low voltage.	
NO1 C1, NO2 C2, NO3 C3, NO4 C4	There are four groups of normally open activation output (on/off button).
NO5 C5 NC5,	There is one group of normally open activation output (on/off button).
Power output control for alarm (CTRL 12V) +12V	<ul> <li>Controls the 6<sup>th</sup> channel power output for alarm. Electric current: 500mA.</li> <li>When there is an alarm output, close the power output.</li> <li>When the alarm is cancelled, open the power output.</li> <li>Rated power supply.</li> <li>Electric current: 500mA.</li> <li>Ground cable.</li> </ul>
● 485 A/B	485 communication port. They are used to control devices such as decoder. $120\Omega$ should be parallel connected between A, B lines if there are too many PTZ decoders.
T+,T-,R+,R-	Four-wire full-duplex RS-485 port. T+ T-: output wire. R+ R-: input wire.

## 4.3.2 Alarm Input

Refer to the following figure for more information.

- Grounding alarm inputs which includes NO (Normally Open) and NC (Normally Closed) type.
- Parallel connect COM end and GND end of the alarm detector (Provide external power to the alarm detector).
- Parallel connect the Ground of the DVR and the ground of the alarm detector.
- Connect the NC port of the alarm sensor to the DVR alarm input (ALARM).
- Use the same ground with that of DVR if you use external power to the alarm device.

#### Figure 4-4

# 4.3.3 Alarm Output

- Provide external power to external alarm device.
- To avoid overloading, read the following relay parameters table carefully.
- RS-485 A/B cable is for the A/B cable of the PTZ decoder.

## 4.3.4 Alarm Output Relay Parameters

 $\square$ 

Refer to the actual product for relay model information.

Model		HFD23/005-1ZS	HRB1-S-DC5V
Material of the touch		AgNi+ gold-plating	AuAg10/AgNi10/CuNi30
	Rated switch capacity	30V DC 1A/125V AC 0.5A	24V DC 1A/125V AC 2A
Rating (Resistance	Maximum switch power	62.5VA/30W	250VA/48W
Load)	Maximum switch voltage	125V AC/60V DC	125V AC/60V DC
	Maximum switch currency	2A	2A
	Between touches	400VAC 1 minute	500VAC 1 minute
Insulation	Between touch and winding	1000VAC 1 minute	1000VAC 1 minute
Turn-on Time	)	5ms maximum	5ms maximum
Turn-off Time	)	5ms maximum	5ms maximum
	Mechanical	1×10 <sup>7</sup> times (300 times/MIN)	5×10 <sup>6</sup> times (300 times/MIN)
Longevity	Electrical	1×10 <sup>5</sup> times (30 times/MIN)	2.5×10 <sup>4</sup> times (30 times/MIN)
Working Terr	perature	-30°C−+70°C	-40℃—+70℃

# 4.4 Connecting to RS-485 Port

- <u>Step 1</u> Connect the RS-485 cable of the PTZ camera to the RS-485 port on the Device. Ensure the match of A and B interfaces.
- <u>Step 2</u> Connect the video out cable of the PTZ camera to the video input port on the Device.
- Step 3 Turn on the PTZ camera.

# **5** Local Configurations

Read the following notes prior to using the Device.

 $\square$ 

- The interfaces in the Manual are used for introducing the operations and only for reference.
   The actual interface might be different dependent on the model you purchased. If there is inconsistency between the Manual and the actual product, the actual product shall govern.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Conventions for mouse operations on a menu.
  - ♦ Click: On the menu, left-click the mouse once on an option to enter the option setting.
  - Right-click: On any interface, right-click the mouse once to return to the previous level.
     For details about mouse operations, see "3.4 Mouse Operations."

# **5.1 Initial Settings**

# 5.1.1 Booting up

- Ensure the input voltage corresponds to the power requirement of the Device. Power on the Device after the power cable is properly connected.
- To protect the Device, connect the Device with the power cable first, and then connect to the power source.
- To ensure the stable work of the Device and the external devices connected to the Device and to prolong the HDD life, it is recommended to refer to the national related standard to use the power source that provides stable voltage with less interference from ripples. UPS power source is recommended.
- <u>Step 1</u> Connect the Device to the monitor.
- <u>Step 2</u> Plug in the power cable to the Device.
- Step 3 Press the power button to turn on the Device. The power indicator light is on.
  - On the connected monitor, the live view screen is displayed by default. If you turn on the Device during the time period that is configured for recording, the system starts recording after it is turned on, and you will see the icon indicating recording status is working in the specific channels.

# 5.1.2 Initializing the Device

When booting up for the first time, you need to configure the password information for **admin** (by default).

 $\square$ 

To secure the Device, it is strongly recommended for you to properly keep the password for admin and modify it regularly.

<u>Step 1</u> Turn on the Device.

### The Location, Language and Video Standard interface is displayed. See Figure 5-1.

Figure 5-1

Device Initialization			Ģ
Location		Please select	
Language		English	
Video Stan	dard	PAL	
			Next

<u>Step 2</u> Select your location from the drop-down list, then language and video standard will match your location automatically. You can change the language and video standard manually.

#### Step 3 Click Next.

The **System Zone** and **System Time** interface is displayed. See Figure 5-2.

Device Initialization	
System Zone	(UTC+08:00)Beijing, Chongqing, Hong 🔻
System Time	2019 -01 -21 11:22:10
	Next

Figure 5-2

<u>Step 4</u> Select system zone, configure system time, and then click **Next**. The **Enter Password** interface is displayed. See Figure 5-3.

Figure 5-3

Device Initialization	n							
1. Enter P	assword	→	2. Unlock	Pattern	<b>→</b>	3. Passwo	ord Protection

Pro				do not use sp	ecial syi	nbols like '	";:&)	
							Next	

<u>Step 5</u> Configure the password information for admin. For details, see Table 5-1. Table 5-1

Parameter	Description		
User	By default, the user is <b>admin</b> .		
Password	In the <b>Password</b> box, enter the password for admin.		
Confirm Password	The new password can be set from 8 characters through 32 characters and contains at least two types from number, letter and pecial characters (excluding"", """, ";", ":" and "&").		
Prompt Question	In the <b>Prompt Question</b> box, enter the information that can remind you of the password. NOTE On the login interface, click  , the prompt will display to help you find back the password.		
Ċ	Click to turn off the Device.		

Step 6 Click Next.

The Unlock Pattern setting interface is displayed. See Figure 5-4.

Figure 5-4

<u>Step 7</u> Draw an unlock pattern.

After the setting is completed, the **Password Protection** interface is displayed. See Figure 5-5.

- The pattern that you want to set must cross at least four points.
- If you do not want to configure the unlock pattern, click Skip.
- Once you have configured the unlock pattern, the system will require the unlock pattern as the default login method. If you skip this setting, enter the password for login.

Figure 5-5

Device Initialization		
1. Enter Passwo	rd $\rightarrow$ 2. Unlock Pattern $\rightarrow$ 3. Passwor	rd Protection
Email Address Security Questions	To reset password, please inpu update in time	it properly or
Question 1	What is your favorite children's book?	
Answer		
Question 2	What was the first name of your first boss?	
Answer		
Question 3	What is the name of your favorite fruit?	
Answer		
		Save

<u>Step 8</u> Configure the protection parameters for password. For details, see Table 5-2. After configuration, if you forget the password for admin user, you can reset the password through the reserved email address or security questions. For details about resetting the password, see "5.1.3 Resetting Password."

If you do not want to configure the settings, disable the email address and security questions functions on the interface.

Table 5-2

Password Protection Mode	Description
	Enter the reserved email address.
Email Address	In the <b>Email Address</b> box, enter an email address for password reset. If you forget the password, enter the security code that you will get from this reserved email address to reset the password of admin.
Security Questions	Configure the security questions and answers. If you forget the password, enter the answers to the questions can make you reset the password.

Ш

If you want to configure the email or security questions fucntion later or you want to change the configurations, select **Main Menu > ACCOUNT > USER**.

<u>Step 9</u> Click **Save** to complete the settings.

The End-User License Agreement interface is displayed.

Step 10 Select I have read and agree to all terms check box.

Step 11 Click Next.

The **Startup Wizard** interface is displayed. For details about quick settings during startup, see "5.1.3.3 Resetting Password."

# 5.1.3 Resetting Password

You can reset the password by the following methods when you forget the password for admin account.

- If the password reset function is enabled, you can use mobile phone to scan the QR code to reset the password. For details, see "5.1.3.2 Resetting Password on Local Interface."
- If the password reset function is disabled, there are two situations:
  - If you configured security questions, you can find back the password by the security questions.
  - If you did not configure the security questions, you can only use the reset button on the mainboard to restore the Device to factory default. For details, see "5.1.3.3 Using Reset Button on the Mainboard."

Ш

Not all models are provided with reset button.

### 5.1.3.1 Enabling Password Reset Function

#### <u>Step 1</u> Select Main Menu > SYSTEM > SECURITY > System Service.

The System Service interface is displayed. See Figure 5-6.

Figure 5-6

🗱 SYSTEM		
GENERAL	Firewall System S	ervice
RS232	Password Reset	
> SECURITY	Mobile Phone Push	
SYSTEM MAINTAIN		
IMP/EXP	CGI	
DEFAULT	ONVIF	
UPGRADE	NTP Server	
	Audio/Video Transmis	The corresponding device or software shall support video decryption function.
		Apply Back
- Crable the <b>D</b>	accurate Depart fun	

# Step 2 Enable the **Password Reset** function.

This function is enabled by default.

<u>Step 3</u> Click **Apply** to save the settings.

## 5.1.3.2 Resetting Password on Local Interface

- Step 1 Enter the login interface.
  - If you have configured unlock pattern, the unlock pattern login interface is displayed. See Figure 5-7. Click **Forgot Pattern**, the password login interface is displayed. See Figure 5-8.
  - If you did not configure unlock pattern, the password login interface is displayed.

See Figure 5-8. Click is to display the password with plaintext.

 $\square$ 

To login from other user account, on the unlock pattern login interface, click **Switch User**; or on the password login interface, in the **User Name** list, select other users to login.

Figure 5-8

SYSTEM LOGIN			
User Name	admin	•	<b>6</b>
Password		0	2
	OK Cancel		

Step 2 Click

- If you have set the reserved email address, the **Prompt** message interface is displayed. See Figure 5-9.
- If you did not set the reserved email address, the email entering interface is displayed. See Figure 5-10. Enter the email address, and then click Next, the Prompt message interface is displayed. See Figure 5-9.

Figure 5-9

Figure 5-10

Reset F	Password			
	Reset Type	QR Code		
	Email Address		To reset password, please inpu	It properly or update in time
				Next Cancel

Step 3 Click OK.

The **Reset Password** interface is displayed. See Figure 5-11.

After clicking **OK**, the system will collect your information for password reset, and the information includes but not limited to email address, MAC address, and device serial number. Read the prompt carefully before clicking **OK**.

Figure 5-11

Step 4 Reset the password.

QR code

Follow the onscreen instructions to get the security code in your reserved email address. In the **Security code** box, enter the security code.

- You can get the security code twice by scanning the same QR code. If you
  need to get the security code once again, refresh the interface.
- Use the security code received in your email box to reset the password within 24 hours; otherwise the security code becomes invalid.
- Security questions
- On the Reset password interface as shown in Figure 5-10, in the Reset Type list, select Security Questions, the Security Questions interface is displayed, see Figure 5-12.

 $\square$ 

If you did not configure the security questions before, in the **Reset Type** list, there will be no **Security Questions**.

2) In the **Answer** box, enter the correct answers.

Figure 5-12

Reset Password	
Reset Type	Security Questions 🔹

## 5.1.3.3 Using Reset Button on the Mainboard

You can always use the reset button on the mainboard to reset the Device to the factory default.

Not all models are provided with reset button.

- <u>Step 1</u> Disconnect the Device from power source, and then remove the cover panel. For details about removing the cover panel, see "2.2 Installing HDD."
- <u>Step 2</u> Find the reset button on the mainboard, and then press and hold the reset button for 5 seconds to 10 seconds. See Figure 5-16 for the location of the reset button.

Figure 5-16

Step 3 Reboot the Device.

After the Device is rebooted, the settings have been restored to the factory default. You can start resetting the password.

# 5.1.4 Setting Up with the Startup Wizard

## 5.1.4.1 Entering Startup Wizard

The Startup Wizard helps you configure the basic settings to set up the Device.

After you have initialized the Device, the **Startup Wizard** interface is displayed. See Figure 5-17.

- If you select the **Auto-check for updates** check box, the system will notify you automatically when updates are available.
- After the auto-check function is enabled, to notify you to update timely, the system will collect the information such as IP address, device name, firmware version, and device serial number. The collected information is only used to verify the legality of the Device and push upgrade notices.
- If you clear the Auto-check for updates check box, the system will not perform automatic checks.

## 5.1.4.2 Configuring General Settings

You can configure the general settings for the Device such as Device name, language, and settings for instant playback.

You can also configure general settings by selecting **Main Menu > SYSTEM > GENERAL > General**.

# Step 1 On the Startup Wizard interface, click Next. The General interface is displayed. See Figure 5-18.

Figure 5-18

General			
Device Name	XVR		
Device No.	8		
Language	ENGLISH -		
Video Standard	NTSC -		
Instant Play(Min.)	5		
Auto Logout(Min.)	10	Monitor Channel(s) w	hen l
IPC Time Sync			
IPC Time Sync Period (hour)	24		
Navigation Bar			
Mouse Sensitivity	- <b>o</b> +	850	
		Back	Next

 $\underline{Step \ 2}$  Configure the general settings parameters. See Table 5-3.

Table 5-3

Parameter	Description
Device Name	In the <b>Device Name</b> box, enter the Device name.
Device No.	In the <b>Device No.</b> box, enter a number for the Device.
Language	In the Language list, select a language for the Device system.
Video Standard	In the <b>Video Standard</b> list, select <b>PAL</b> or <b>NTSC</b> according to your actual situation.
Instant Play (Min.) In the <b>Instant Play</b> box, enter the time length for play recoded video. The value ranges from 5 to 60. On the live view control bar, click the instant playback buttor the recorded video within the configured time.	
Auto Logout (Min.)	In the <b>Auto Logout</b> box, enter the standby time for the Device. The Device automatically logs out when it is not working for the configured time period. You need to login the Device again. The value ranges from 0 to 60. 0 indicates there is not standby time for the Device. Click <b>Monitor Channel(s) when logout</b> . You can select the channels that you want to continue monitoring when you logged out.
IPC Time Sync	Syncs the Device time with IP camera.
IPC Time Sync Period (hour)	In the IPC Time Sync Period box, enter the interval for time sync.
Navigation Bar Enable the navigation bar. When you click on the live view screet	

Parameter	Description	
navigation bar is displayed.		
Mouse Sensitivity	Adjust the speed of double-click by moving the slider.	
Mouse Sensitivity	The bigger the value is, the faster the double-clicking speed must be.	

## 5.1.4.3 Configuring Date and Time Settings

You can configure the system time, choose the time zone, set the daylight saving time, and enable the NTP server.

You can also configure date and time settings by selecting **Main Menu > SYSTEM >** 

## GENERAL > Date &Time.

<u>Step 1</u> After you have configured the general settings, on the **General** interface, click **Next**. The **Date &Time** interface is displayed. See Figure 5-19.

								າກ
	🗱 SYSTEM					<b>.</b> (	L <b>*</b> + 8	
>	GENERAL	General Dat	e&Time Holiday

		Server	time.windows.com	Manual Update				
		Port	123					
		Interval(Min.)	60					
				A	pply	Ba	ack	

Figure 5-19

<u>Step 2</u> Configure the settings for date and time parameters. See Table 5-4.

Parameter	Description
System Time	In the <b>System Time</b> box, enter time for the system. Click the time zone list, you can select a time zone for the system, and the time in adjust automatically. Do not change the system time randomly; otherwise the recorded video cannot be searched. It is recommended to avoid the recoding period or stop recording first before you change the system time.
System Zone	In the <b>System Zone</b> list, select a time zone for the system.
Date Format	In the <b>Date Format</b> list, select a date format for the system.
Date Separator	In the Date Separator list, select a separator style for the date.
Time Format	In the <b>Time Format</b> list, select <b>12-HOUR</b> or <b>24-HOUR</b> for the time display style.
DST	Enable the Daylight Saving Time function. Click Week or click Date.
Start Time End Time	Configure the start time and end time for the DST.
NTP	Enable the NTP function to sync the Device time with the NTP server.
Server In the Server box, enter the IP address or domain corresponding NTP server. Click Manual Update, the Device starts syncing wit immediately.	
Port	The system supports TCP protocol only and the default setting is 123.
Interval (Min.)	In the <b>Interval</b> box, enter the amount of time that you want the Device to sync time with the NTP server. The value ranges from 0 to 65535.

## 5.1.4.4 Configuring Network Settings

You can configure the basic network settings such as net mode, IP version, and IP address of the Device.

You can also configure network settings by selecting Main Menu > NETWORK > TCP/IP.

<u>Step 1</u> After you have configured the date and time settings, on the **Date &Time** interface, click **Next**.

The **NETWORK** interface is displayed. See Figure 5-20.

Figure 5-20

_						
	🍪 NETWORK			LIVE	🛓 🕒 🗸 🔡

				 Apply	Back	

Table 5-5

Parameter	Description			
Net Mode	<ul> <li>Multi-address: Two Ethernet ports work separately through either of which you can request the Device to provide the services such as HTTP and RTSP. You need to configure a default Ethernet port (usually the Ethernet port 1 by default) to request the services from the device end such as DHCP, Email and FTP. If one of the two Ethernet ports is disconnected as detected by networking testing, the system network status is regarded as offline.</li> <li>Fault Tolerance: Two Ethernet ports share one IP address. Normally only one Ethernet port is working and when this port fails, the other port will start working automatically to ensure the network connection. When testing the network status, the network is regarded as offline only when both of the two Ethernet ports are disconnected. The two Ethernet ports are used under the same LAN.</li> <li>Load Balance: Two network status, the network load averagely. If one of them fails, the other can continue working normally. When testing the network status, the network is regarded as offline only when both of the two Ethernet ports are disconnected. The two Ethernet ports are used under the same LAN.</li> </ul>			

Parameter	Description		
	The Device with single Ethernet port does not support this function.		
	In the <b>Ethernet Card</b> list, select an Ethernet port as a default port.		
Default Ethernet Port	This setting is available only when the <b>Multi-address</b> is selected in the		
	Net Mode list.		
IP Version	In the IP Version list, you can select IPv4 or IPv6. Both versions are		
	supported for access.		
MAC Address	Displays the MAC address of the Device.		
	Enable the DHCP function. The IP address, subnet mask and default		
	gateway are not available for configuration once DHCP is enabled.		
	• If DHCP is effective, the obtained information will display in the <b>IP</b>		
	Address box, Subnet Mask box and Default Gateway box. If not,		
DHCP	all values show 0.0.0.0.		
	If you want manually configure the IP information, disable the		
	DHCP function first.		
	<ul> <li>If PPPoE connection is successful, the IP address, subnet mask,</li> <li>default actoway, and DHCP are not available for configuration</li> </ul>		
	default gateway, and DHCP are not available for configuration.		
IP Address	Enter the IP address and configure the corresponding subnet mask a		
Subnet Mask	default gateway.		
Default Gateway	IP address and default gateway must be in the same network segment.		
DNS DHCP	Enable the DHCP function to get the DNS address from router.		
Preferred DNS	In the <b>Preferred DNS</b> box, enter the IP address of DNS.		
Alternate DNS	In the <b>Alternate DNS</b> box, enter the IP address of alternate DNS.		
	In the <b>MTU</b> box, enter a value for network card. The value ranges from		
	1280 byte through 1500 byte. The default is 1500.		
	The suggested MTU values are as below.		
	• 1500: The biggest value of Ethernet information package. This		
	value is typically selected if there is no PPPoE or VPN connection,		
MTU	and it is also the default value of some routers, network adapters		
	and switches.		
	• 1492: Optimized value for PPPoE.		
	1468: Optimized value for DHCP.		
	1450: Optimized value for VPN.		
Test	Click Test to test if the entered IP address and gateway are		
1000	interworking.		

## 5.1.4.5 Configuring P2P Settings

You can add the Device into your cell phone client or the platform to manage. You can also configure P2P function by selecting **Main Menu > NETWORK > P2P**.  $\square$ 

Make sure the DVR is connected into the Internet, and if yes, in the **Status** box of the P2P interface, it shows **Online**.

<u>Step 1</u> After you have configured the network settings, on the **NETWORK** interface, click **Next**.

The **P2P** interface is displayed. See Figure 5-21.

Figure 5-21

P2P	
Enable	
	To assist you in remotely managing your device, the P2P will be enabled. After enabling P2P and connecting to Internet, we need to collect IP address, MAC address, device name, device SN, etc. All collected info is used only for the purpose of remote access.
	If you don't agree to enable P2P function, please deselect the check box.
Status	
Cell Phone Client	Device SN
Scan the QR Scale the QR Code on the Mactual interface	Scan the QR Scan the QR code on the actual interface
Scan QR to Download	000000000000000000000000000000000000000
	Back

<u>Step 2</u> Enable the P2P function.

 $\square$ 

After the P2P function is enabled and connected to the Internet, the system will collects your information for remote access, and the information includes but not limited to email address, MAC address, and device serial number.

You can start adding the device.

- Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device.
- Platform: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual.

 $\square$ 

• You can also enter the QR code of Cell Phone Client and Device SN by

clicking 🔤 on the top right of the interfaces after you have entered the Main Menu.

• If selection of this function is canceled, the **Message** interface is displayed. See Figure 5-22. Choose to enable it or not according to your actual need.

#### Figure 5-22

To use this function, take adding device into Cell Phone Client as an example.

#### Adding Device into Cell Phone Client

- <u>Step 1</u> Use your cell phone to scan the QR code under Cell Phone Client to download the application.
- Step 2 On your cell phone, open the application, and then tap

The menu is displayed. You can start adding the device.

1) Tap **Device Manager**.

The **Device Manager** interface is displayed. See Figure 5-23. Figure 5-23

$\equiv$	Device Manager	+
	Q Search Device	
	Create device card	

2) Tap **t** on the top right corner.

The interface requiring device initialization is displayed. A pop-up message reminding you to make sure the Device is initialized is displayed.

3) Tap **OK**.

- ◇ If the Device has not been initialized, Tap **Device Initialization** to perform initializing by following the onscreen instructions.
- $\diamond~$  If the Device has been initialized, you can start adding it directly.
- 4) Tap Add Device.

The Add Device interface is displayed. See Figure 5-24.

You can add wireless device or wired device. The Manual takes adding wired device as an example.

Figure 5-24

5) Tap **P2P**.

The **P2P** interface is displayed. See Figure 5-25.

Figure 5-25

Parameter	Description	
Channel	In the Channel list, select the channel that you want to configure the	
Onannei	settings for.	
	Enable the smart codec function. This function can reduce the video	
Smart Codec	bit stream for non-important recorded video to maximize the storage	
	space.	
	• Main Stream: In the Type list, select General, MD (Motion	
Туре	Detect), or Alarm.	
	Sub Stream: This setting is not configurable.	
	In the <b>Compression</b> list, select the encode mode.	
	• H.265: Main profile encoding. This setting is recommended.	
	• H.264H: High profile encoding. Low bit stream with high	
Compression	definition.	
	H.264: Main profile encoding.	
	H.264B: Baseline profile encoding. This setting requires higher bit	
	stream compared with other settings for the same definition.	
	In the Resolution list, select resolution for the video.	
Resolution	The maximum video resolution might be different dependent on your	
	device model.	
Frame Rate	Configure the frames per second for the video. The higher the value	
(FPS)	is, the clearer and smoother the image will become. Frame rate	

Parameter	Description		
	changes along with the resolution.		
	Generally, in PAL format, you can select the value from 1 through 25;		
	in NTSC format, you can select the value from 1 through 30. However,		
	the actual range of frame rate that you can select depends on the		
	capability of the Device.		
	In the Bit Rate Type list, select CBR (Constant Bit Rate) or VBR		
Bit Rate Type	(Variable Bit Rate). If you select CBR, the image quality cannot be		
	configured; if you select <b>VBR</b> , the image quality can be configured.		
Quality	This function is available if you select <b>VBR</b> in the <b>Bit Rate</b> List.		
Quality	The bigger the value is, the better the image will become.		
I Frame Interval	The interval between two reference frames.		
	In the Bit Rate list, select a value or enter a customized value to		
Bit Rate (Kb/S)	change the image quality. The bigger the value is, the better the		
	image will become.		
Video	Enable the function for sub stream.		
	Click More Setting, the More Setting interface is displayed.		
Audio Encode	• Audio Encode: This function is enabled by default for main		
	stream. You need to manually enable it for sub stream 1. Once		
	this function is enabled, the recorded video file is composite		
	audio and video stream.		
Audio Source	• Audio Source: In the Audio Source list, you can select LOCAL		
	and HDCVI.		
	$\diamond$ LOCAL: The audio signal is input from Audio In port.		
Audio Format	$\diamond$ HDCVI: The audio signal is input from HDCVI camera.		
	• Audio Format: In the Audio Format list, select a format that you		
	need.		

## 5.1.4.7 Configuring Snapshot Settings

You can configure the basic snapshot settings such as quantity of snapshot each time, channel(s) to take snapshot, and image size and quality of snapshot.

You can also configure general settings by selecting **Main Menu > CAMERA > ENCODE > Snapshot**.

For more information about snapshot settings, see "5.8 Configuring Snapshot Settings."

<u>Step 1</u> After you have configured the encode settings, on the **Encode** interface, click **Next**. The **SNAPSHOT** interface is displayed. See Figure 5-28.

Figure 5-28

SNAPSHOT				
Manual Snap	1 *	/Time		
Channel	1 ~			
Mode	General 🔻			
Image Size	352x288(CIF)			
Image Quality	4 🔹			
Interval	1 Second 🔹			
Default Copy			Back	Next

<u>Step 2</u> Configure the settings for the snapshot parameters. See Table 5-7.

Table 5-7

Parameter	Description
Manual Snap	In the Manual Snap list, select how many snapshots you want to take
	each time.
Channel	In the Channel list, select the channel that you want to configure the
Channel	settings for.
	In the Mode list, you can select Human Face, Event, or General as
	the event type for which you want to take a snapshot.
	• <b>General</b> : The snapshot is taken during the scheduled period.
Mode	• Event: The snapshot is taken when there is an alarm event
Mode	occurs, such as motion detection event, video loss, and local
	alarms.
	• Human Face: The snapshot is taken when the face is detected.
	The face detection function is support only with the Channel 1.
Image Size	In the Image Size list, select a value for the image. The bigger the
	value is, the better the image will become.
	Configure the image quality by 6 levels. The higher the level is, the
Image Quality	better the image will become.
Interval	Configure or customize the snapshot frequency.

## 5.1.4.8 Configuring Basic Storage Settings

You can configure the settings for the situations when HDD is full, file length and time length of recorded video, and the settings if to auto-delete the old files.

You can also configure basic storage settings by selecting Main Menu > STORAGE > BASIC.

<u>Step 1</u> After you have configured the encode settings, on the **SNAPSHOT** interface, click **Next**.

The **BASIC** interface is displayed. See Figure 5-29.

Figure 5-29

BASIC						
HDD Full	0	verwrite				
Pack Mode	Ti	me Length	60	Min.		
Auto-Delete	e Old Files No	ever				
					Back	Next

<u>Step 2</u> Configure the basic storage settings parameters. See Table 5-8.

Table 5-8

Parameter	Description
HDD Full	<ul> <li>Configure the settings for the situation when all the read/write discs are full, and there are no more free discs.</li> <li>Select Stop Record to stop recording</li> <li>Select Overwrite to overwrite the recorded video files always from the earliest time.</li> </ul>
Pack Mode	The locked recorded video files will not be overwritten. Configure the time length and file length for each recorded video.
Auto-Delete Old Files	Configure whether to delete the old files and if yes, in the <b>Auto-Delete</b> <b>Old Files</b> list, select <b>Customized</b> to configure the time length for how long you want to keep the old files.

## 5.1.4.9 Configuring Recorded Video Storage Schedule

You can configure the schedule for the recorded video such as channels to record, alarm settings, and the armed period.

You can also configure recorded video storage settings by selecting **Main Menu > STORAGE > SCHEDULE > Record**.

<u>Step 1</u> After you have configured the basic storage settings, on the **BASIC** interface, click **Next**.

#### The **Record** interface is displayed. See Figure 5-30.

Figure 5-30

<u>Step 2</u> Configure the record settings parameters. See Table 5-9.

Table 5-9

Parameter	Description
Channel	In the <b>Channel</b> list, select a channel to record the video.
Pre-record	In the <b>Pre-record</b> list, enter the amount of time that you want to start
	the recording in advance.
	If there are several HDDs installed to the Device, you can set one of
	the HDDs as the redundant HDD to save the recorded files into
	different HDDs. In case one of the HDDs is damaged, you can find the
	backup in the other HDD.
	• Select Main Menu > STORAGE > HDD MANAGER, and then
	set a HDD as redundant HDD.
	• Select Main Menu > STORAGE > SCHEDUE > Record, and
	then select the <b>Redundancy</b> check box.
	$\diamond$ If the selected channel is not recording, the redundancy function
Redundancy	takes effect next time you record no matter you select the check
	box or not.
	$\diamond$ If the selected channel is recording, the current recorded files will
	be packed, and then start recording according to the new
	schedule.
	Not all models support this function.
	• The redundant HDD only back up the recorded videos but not
	snapshots.

Parameter	Description
	Select the check box of the event type which includes General, MD
Event type	(motion detect, video loss, tempering, diagnosis), Alarm (IoT alarms,
	local alarms, alarms from alarm box, IPC external alarms, IPC Offline
	alarms), <b>MD&amp;Alarm</b> , <b>Intel</b> (IVS events, face detection), and <b>POS</b> .
Period	Define a period during which the configured recording setting is
	active.
	The system only activates the alarm in the defined period.
Сору	Click <b>Copy</b> to copy the settings to other channels.

<u>Step 3</u> Define the video recording period by drawing or editing. By default, it is active all the time.

- Define the period by drawing.
- 1) Select the check box of event type. See Figure 5-31.

#### Figure 5-31

General MD Alarm MD&Alarm Intel POS	🛃 General	MD	Alarm	MD&Alarm	Intel	POS
-------------------------------------	-----------	----	-------	----------	-------	-----

- 2) Define a period. The system supports maximum six periods.

  - $\diamond$  Define for several days of a week: Click  $\square$  before each day one by one, the

icon switches to . You can define the period for the selected days simultaneously.

3) On the timeline, drag to define a period. The Device starts recoding the selected event type in the defined period. See Figure 5-32.

Figure 5-32

The color bar indicates the event type that is effective in a defined period:

### $\square$

- Recording priority in case of event types are overlapped: MD&Alarm > Alarm > Intel > MD > General.
- Select the check box of event type, and then click for the defined period.
- When selecting MD&Alarm, the MD and Alarm check boxes will be cleared respectively.
- Define the period by editing. Take Sunday as an example.
- 1) Click 🛄.

#### The **Period** interface is displayed. See Figure 5-33.

Figure 5-33

Period					-				
Current Date	e: Sunda								
Period 1	00:00	- 24:00	🔽 General	MD	Alarm	MD&Alarm	🗌 Intel	POS	
Period 2	00:00	- 24:00	General	🗌 MD	Alarm	MD&Alarm	🗌 Intel	POS	
Period 3	00:00	- 24:00	General	🗌 MD	Alarm	MD&Alarm	Intel	POS	
Period 4	00:00	- 24:00	General	🗌 MD	Alarm	MD&Alarm	Intel	POS	
Period 5	00:00	- 24:00	Genera	🗌 MD	Alarm	MD&Alarm	Intel	POS	
Period 6	00:00	- 24:00	General	D MD	Alarm	MD&Alarm	🗌 Intel	POS	
Сору									
🗌 All									
🖂 Sunday		londay	Tuesday	Wednes	day 🗌 Thursd	ay 🗌 Friday	Sat	turday	
								Apply	Cancel

- 2) Enter the time frame for the period and select the event check box.
  - $\diamond$  There are six periods for you to set for each day.
  - ♦ Under Copy, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 3) Click **Apply** to save the settings.
- <u>Step 4</u> Click **Apply** to complete the settings.

 $\square$ 

- Click **Copy** to copy the settings to other channels.
- After configuring the recording schedule settings, you need to perform the following operations to start recording according to the defined schedule.
  - Enable the alarm event and cofigure the settings for the recording channel.
     For details, see "5.10 Alarm Events Settings."
  - You need to enable the recording function, see "5.9.1 Enabling Record Control."

## 5.1.4.10 Configuring Snapshot Storage Schedule

You can configure the storage schedule for the snapshot such as channels to take snapshot, alarm settings, and the armed period.

You can also configure snapshot storage settings by selecting Main Menu > STORAGE > SCHEDULE > Snapshot.

Step 1 After you have configured the video recording settings, on the Record interface, click Next.

The **SNAPSHOT** interface is displayed. See Figure 5-34.

Figure 5-34

Step 2 Configure the snapshot settings parameters. See Table 5-10. Table 5-10

Parameter	Description
Channel	In the <b>Channel</b> list, select a channel to take a snapshot.
Eventtune	Select the check box of the event type which includes General, MD,
Event type	Alarm, MD&Alarm, Intel, and POS.
	Define a period during which the configured snapshot setting is active.
Period	For details about defining a period, see "5.1.4.9 Configuring Recorded
	Video Storage Schedule."
Сору	Click <b>Copy</b> to copy the settings to other channels.

#### Step 3 Click Finished.

A pop-up message is displayed.

#### Step 4 Click OK.

The live view screen is displayed. The setting up with startup wizard is completed. You can start using the Device.

<u>Step 5</u> (Optional) After the setting with startup wizard is completed, if the connected HDMI display resolution is inconsistent with default resolution (1280\*1024), a dialog box will pop up. See Figure 5-35. Choose to switch the resolution or not.

Figure 5-35

Change Resolution	
The monitor supports 3840 x 2160 resolution, do you want to change the device resolution?	
OK Cancel	

# 5.2 Live View

After you logged in the Device, the live view is displayed. See Figure 5-36. The number of channels displayed depends on your model.

To enter the live view screen from other interfaces, click used on the top right of the screen.

Figure 5-36

# 5.2.1 Live View Screen

You can view the live video from the connected cameras through each channel on the screen.

- By default, the system time, channel name and channel number are displayed on each channel window. This setting can be configured by selecting **Main Menu > CAMERA > OVERLAY.**
- The figure in the bottom right corner represents channel number. If the channel position is changed or the channel name is modified, you can recognize the channel number by this figure and then perform the operations such as record query and playback.

For the icons displayed on each channel, see Table 5-11.

#### Table 5-11

lcon	Function
	Indicates recording status. This icon displays when the video is being recorded.
×	This icon displays when the motion detection occurs in the scene.
?	This icon displays when the video loss is detected.
6	This icon displays when the channel monitoring is locked.
<u></u>	1

To switch the position of two channels, point to one of the two channels, and then drag the window to the other channel.

# 5.2.2 Live View Control Bar

The live view control bar provides you access to perform the operations such as playback, zoom, real-time backup, manual snapshot, voice talk, adding remote devices, and streams switch.

When you move the pointer to the top middle position of a channel window, the live view control bar is displayed. See Figure 5-37 for analog channel and Figure 5-38 for digital channel.

If there is not operation for six seconds after the control bar is displayed, the control bar hides automatically.

Figure 5-37

Figure 5-38

Table 5-12

No.	Function	No.	Function	No.	Function
1	Instant Play	4	Manual Snap	7	Siren
2	Digital Zoom	5	Mute	8	Audio Talk
3	Real-time Backup	6	White Light	9	Camera Registration

## 5.2.2.1 Instant Playback

You can play back the previous five minutes to sixty minutes of the recorded video.

By clicking **b**, the instant playback interface is displayed. The instant playback has the following features:

- Move the slider to choose the time you want to start playing.
- Play, pause and close playback.
- The information such as channel name and recording status icon are shielded during instant playback and will not display until exited.
- During playback, screen split layout switch is not allowed.
- To change the playback time, select **Main Menu > SYSTEM > GENERAL**, in the **Instant Play** box, enter the time you want to play back. See Figure 5-39.

🗱 SYSTEM					LIVE

	Mouse Sens	itivity		<b>•</b> +	850	
					Apply	Back

Figure 5-39

### 5.2.2.2 Digital Zoom

You can enlarge a specific area of the image to view the details by either of the following two ways.

- Click , the icon switches to . Hold down the left mouse button to select the area you want to enlarge. The area is enlarged after the left mouse button is released.
- Point to the center that you want to enlarge, rotate the wheel button to enlarge the area.

 $\square$ 

- For some models, when the image is enlarged in the first way described previously, the selected area is zoomed proportionally according to the window.
- When the image is in the enlarged status, you can drag the image toward any direction to view the other enlarged areas.
- Right-click on the enlarged image to return the original status.

### 5.2.2.3 Real-time Backup

You can record the video of any channel and save the clip into a USB storage device.

By clicking *mathefull*, the recording is started. To stop recording, click this icon again. The clip is automatically saved into the connected USB storage device.

## 5.2.2.4 Manual Snapshot

You can take one to five snapshots of the video and save into a USB storage device.

By clicking , you can take snapshots. The snapshots are automatically saved into the connected USB storage device. You can view the snapshots on your PC.

 $\square$ 

To change the quantity of snapshots, select **Main Menu > CAMERA > ENCODE > Snapshot**, in the **Manual Snap** list, select the snapshot quantity.

# 5.2.2.5 Mute (Analog channel only)

You can mute the video sound by clicking . This function is supported in single-channel view.

# 5.2.2.6 White Light (Supported on camera with white light function)

Click Click common the camera to turn on the white light function.

## 5.2.2.7 Siren (Supported on camera with siren function)

Click Click common to generate alarm sound.

## 5.2.2.8 Bidirectional Talk (Digital channel only)

You can perform the voice interaction between the Device and the remote device to improve efficiency of emergency. This function is supported only when the remotely connected IPC device supports bidirectional talk.

- Click , the icon switches to , the bidirectional talk of the remote device is turned on. The bidirectional talk of other digital channels is disabled.
- Click we to cancel the bidirectional talk. The bidirectional talk of other digital channels is resumed.

## 5.2.2.9 Remote Devices (Digital channel only)

You can view the information of remote devices and add new remote devices to replace the current connected devices.

By clicking E, the **Camera Registration** interface is displayed. For details about adding the remote devices, see "5.6 Configuring Remote Devices."

# 5.2.3 Navigation Bar

You can access the functions to perform operations through the function icons on the navigation bar. For example, you can access Main Menu and switch window split mode. See Figure 5-40.

The navigation bar is disabled by default. It does not appear in the live view screen until it is enabled. To enable it, select **Main Menu > SYSTEM > GENERAL**, enable the Navigation Bar, and then click **Apply**.

# 5.2.5 Color Setting

You can adjust the video image color effect such as sharpness, brightness, and contrast. The parameters are different according to the connected camera type. Take analog channel as an example.

In the live view screen, right-click on the analog channel to see the shortcut menu, and then select **Color Setting**, the **COLOR** interface is displayed. See Figure 5-42.

For details, see "5.5.1 Configuring Image Settings."

Figure 5-42

Table 5-15

Parameter	Description
Period	Divide 24 hours into two periods and configure the corresponding
	color settings.
Effective Time	Enable the function and then set the effective time for each period.
	Adjust the sharpness of image edge. The bigger the value is, the
Sharpness	more obvious the image edge, and the noise is also greater.
	The value ranges from 1 to 15. The default value is 1.
Hue	Adjust the hue of image. The value ranges from 0 to 100. The default value is 50.
	Adjust the image brightness. The value ranges from 0 to 100. The default value is 50.
	The bigger the value is, the brighter the image will become. You
Brightness	can adjust this value when the image as a whole looks dark or
	bright. However, the image is likely to become dim if the value is
	too big.
	The recommended range is between 40 and 60.
	Adjust the image contrast. The bigger the value is, the more
	obvious the contrast between the light area and dark area will become. You can adjust this value when the contrast is not
	obvious. However, if the value is too big, the dark area is likely to
Contrast	become darker and the light area over exposed. If the value is too
	small, the image is likely to become dim.
	The value ranges from 0 to 100. The default value is 50. The
	recommended range is between 40 and 60.
	Adjust the color shades. The bigger the value, the lighter the color
	will become. This value does not influence the general image
Saturation	lightness.
	The value ranges from 0 to 100. The default value is 50. The
	recommended range is between 40 and 60.
	In the Color Mode list, you can select Standard, Soft, Bright,
	Colorful, Bank, Customized 1, Customized 2, Customized 3,
Color Mode	and <b>Customized 4</b> .
	The sharpness, hue, brightness, contrast and saturation will adjust automatically according to the selected color mode.
	Enhance the image effect. Adjust the effect value.
	Click , image is adjusted to the optimized effect automatically.
EQ	<ul> <li>Click , the current effect setting will be locked.</li> </ul>
	<ul> <li>Grick man, the current effect setting will be locked.</li> </ul>
	Only HD analog channel supports this function.
	Adjust the display position of the image in the channel window. The
	value indicates pixel. The default value is 16.
Position	
	This function is only supported by analog channel.
	This function is only supported by analog challing.

Parameter	Description					
Customized	<ol> <li>You can customize four color modes.</li> <li>Click Customized. The Customized Color interface is displayed.</li> <li>In the Color Mode list, select Customized 1, for example. Then configure the settings for sharpness, hue, brightness, contrast and saturation. If you select All, the configuration will applies to all four customized color modes.</li> <li>Click OK.</li> <li>On the COLOR interface, in the Color Mode list, you can</li> </ol>					
	select the customized color mode.					

# 5.2.6 Live View Display

# 5.2.6.1 Configuring Display Settings

You can configure the display effect such as displaying time title and channel title, adjusting image transparency, and selecting the resolution.

<u>Step 1</u> Select Main Menu > DISPLAY > Display.

The **DISPLAY** interface is displayed. See Figure 5-43.

		Some of the resolution options might not be supported on the HDMI port.
• T	he main menu does	not display on the extra screen.
• If	you do not enable	the extra screen function, both the VGA port and HDMI port
d	isplay the same image	de.

## 5.2.6.2 Configuring Viewing Layout

You can configure the view layout in the live view screen.

```
<u>Step 1</u> Select Main Menu > DISPLAY > VIEW.
```

The View Setting interface is displayed. See Figure 5-44.

📃 DISPLAY				
DISPLAY	ïew Setting			
> VIEW				
TOUR				
ZERO-CHANNEL	1 -	2 -	3 -	4 -
TV ADJUST				
	5 🔻	6 💌	7 🔻	8 👻
	9 -	10 👻	11 -	12 💌
	13 -	14 💌	15 👻	16 💌
	25			
				Angle De d
				Apply Back

Figure 5-44

<u>Step 2</u> Configure the view layout by clicking the layout buttons on the bottom. See Figure 5-45. Figure 5-45

For example, click and select **9-16**, the view layout changes immediately, see Figure 5-46.

Figure 5-46

	💻 DISPLAY					
	DISPLAY	View Setting				
>	VIEW					
	TOUR					
	ZERO-CHANNEL				10 -	
	TV ADJUST					
			9 👻		11 -	
					12 🔻	
		16 🔻	15 👻	14 -	13 🔻	
					Apply Back	

<u>Step 3</u> Adjust the position of channels if needed.

In the channel list, for example, in the channel 9 list, you can select 10, and then the channel 9 and channel 10 exchange positions.

<u>Step 4</u> Click **Apply** to complete the settings. The live view screen displays the same layout as configured in this section.

# 5.2.6.3 Configuring Zero-Channel Settings

You can view several video sources on one channel on the web end.

Step 1 Select Main Menu > DISPLAY > ZERO-CHANNEL.

The **ZERO-CHANNEL** interface is displayed. See Figure 5-47.

Figure 5-47

具 DISPLAY			LIVE		
DISPLAY	Enable				
	Compression	H.264			
TOUR	Resolution	704*576(D1)			
> ZERO-CHANNEL	Frame Rate(FPS)	25			
TV ADJUST	Bit Rate(Kb/S)	1024			
			Apply	Back	
			, ppi	Dach	

<u>Step 2</u> Configure the settings for the zero-channel parameters. See Table 5-17. Table 5-17

Parameter	Description
Enable	Enable zero-channel function.
Compression	In the Compression list, select the video compression standard
Compression	according to the device capability. The default is H.265.
Resolution	In the Resolution list, select the video resolution. The default is
	704×576 (D1).
Fromo Boto	Select a value between 1 and 25 for PAL standard, and between 1
Frame Rate	and 30 for NTSC standard. The actual arrange is decided and
(FPS)	selected dependent on the Device capability.
Bit Rate (Kb/S)	The default value is 1024Kb/S. The actual arrange is decided and
	selected dependent on the Device capability and frame rate.

<u>Step 3</u> Click **Apply** to save the settings.

In the live interface on the web, click  $\square \square \square$  to select one of the multi-channel modes, and then you can view the local video image.

# 5.2.6.4 Configuring TV

Not all models support this function.

You can adjust the border margins in top, bottom, left and right directions as well as the brightness of the monitor connected to the Video out port of the Device.

#### Step 1 Select Main Menu > DISPLAY > TV ADJUST.

The TV ADJUST interface is displayed. See Figure 5-48.

Figure 5-48

💻 DISPLAY				
DISPLAY VIEW TOUR ZERO-CHANNEL	Top Margin Bottom Margin Left Margin Bight Margin	-0 -0 -0		
TV ADJUST	Right Margin Brightness	- <b>o</b> <b>o</b>	+ 0 + 128	
	Default			Appiy Back

<u>Step 2</u> Configure the parameters according to your actual situation. <u>Step 3</u> Click **Apply** to complete the settings.

# 5.2.7 Configuring Tour Settings

You can configure a tour of selected channels to repeat playing videos. The videos display in turn according to the channel group configured in tour settings. The system displays one channel group for a certain period and then automatically changes to the next channel group. <u>Step 1</u> Select **Main Menu > DISPLAY > TOUR**.

The **TOUR** interface is displayed. There are Main Screen tab and Extra Screen tab, see Figure 5-49 and Figure 5-50.

Figure 5-49

	Add	Modify Delete Move up Move down	
		Apply	Back

<u>Step 2</u> Configure the settings for the tour parameters for both Main Screen and Extra Screen. See Table 5-18.

Table 5-18

Parameter	Description
Enable	Enable tour function.
Interval (Sec.)	Enter the amount of time that you want each channel group displays on the screen. The value ranges from 5 seconds to 120 seconds, and the default value is 5 seconds.
Video Detect,	Select the View 1 or View 8 for Motion Detect tour and Alarm Tour
Alarm	(system alarm events).
Window Split	In the <b>Window Split</b> list, select <b>View 1</b> , <b>View 4</b> , <b>View 8</b> , or other modes that are supported by the Device.
Channel Group	<ul> <li>Display all channel groups under the current Window Split setting.</li> <li>Add a channel group: Click Add, in the pop-up Add Group channel, select the channels to form a group, and then click Save.</li> <li>Delete a channel group: Select the check box of any channel group, and then click Delete.</li> <li>Edit a channel group: Select the check box of any channel group and then click Modify, or double-click on the group. The Modify Channel Group dialog box is displayed. You can regroup the channels.</li> <li>Click Move up or Move down to adjust the position of channel group.</li> </ul>
<u>Step 3</u> Click Ar ⊙	oply to save the settings.
• Or	the top right of the live view screen, use the left mouse button or press Shift to
sw	itch between ${}^{igodold mathbf{o}}$ (image switching is allowed) and ${}^{igodold mathbf{o}}$ (image switching is no
alle	owed) to turn on/off the tour function.
• Or	the navigation bar, click 🛄 to enable the tour and click 🛄 to disable it

### Adding a Channel Group

Step 1 Click Add.

The Add Group interface is displayed. See Figure 5-51.

Figure 5-51

Add Group	
<b>1</b> 2 3 4 5 6 7 8 9 10 11 12	
13 14 15 16 17 18 19 20 21 22 23 24 Group Order:	
ОК	Back

Step 2 Select the channels that you want to group for tour. See Figure 5-52.

If you want to select more than one channel, in the **Window Split** list, do not select **View 1**.

Figure 5-52

Add Group		
1 2 3 4 <b>5 6 7 8</b> 13 14 15 16 17 18 19 20		
Group Order: 5,6,7,8		
	OK Ba	ack

<u>Step 3</u> Click **OK** to complete the settings.

#### Modifying a Channel Group

Double-click on a channel group, the **Modify Channel Group** interface is displayed. See Figure 5-53.

You can modify channel group and click **OK** to complete the settings.

Figure 5-53

Modify Channel Group		
12345678

# 5.3 Entering Main Menu

Right-click on the live view screen, the shortcut menu is displayed, Click Main Menu and then login the system. The Main Menu is displayed, see Figure 5-54.

Figure 5-54

No.	lcon	Description	
		Includes six function tiles: VIDEO, ALARM, SMART DETECTION, POS,	
1	Function tiles	<ul> <li>IoT, and BACKUP. Click each tile to open the configuration interface of the tile.</li> <li>VIDEO: Search for and play back the recorded video saved on the Device.</li> <li>ALARM: Search for alarm information and configure alarm event actions.</li> <li>SMART DETECTION: Search SMD, face detection, and IVS information, and configure related settings.</li> <li>POS: You can connect the Device to the POS (Point of Sale) machine and receive the information from it.</li> <li>IoT: IoT live video preview, search, export reports, and configure function settings.</li> <li>BACKUP: Search and back up the video files to the external storage device such as USB storage device.</li> </ul>	
2	Switch icon	indicates the current page of main menu. Click to switch to the	
	10011	next page.	
3	Configura tion menu	Includes six configurations through which you can configure camera settings, network settings, storage settings, system settings, account settings, and view information.	
4	Live	Click use to go to the live view screen.	
5	•	When you point to . , the current user account is displayed.	
6	•	Click , select Logout, Reboot, or Shutdown according to your actual situation.	
7	9 9 5 2	<ul> <li>Displays Cell Phone Client and Device SN QR Code.</li> <li>Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device from your cell phone.</li> <li>Device SN: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual. You can also configure P2P function in the local configurations. See "5.1.4.5 Configuring P2P Settings."</li> </ul>	

Table 5-19

# **5.4 Controlling PTZ Cameras**

PTZ is a mechanical platform that carries a camera and a protective cover and performs overall control remotely. A PTZ can move in both horizontal and vertical direction to provide all-around view to the camera.

 $\square$ 

Before operating PTZ, ensure the network connection between PTZ and the Device.

# **5.4.1 Configuring PTZ Connection Settings**

You need to configure the PTZ connection settings before use.

- Local connection: RS-485 Port for connecting Speed Dome or coaxial cable for connecting coaxial camera.
- Remote connection: local area network.

### Step 1 Select Main Menu > CAMERA > PTZ.

The PTZ interface is displayed. See Figure 5-55.

Figure 5-55

<u>Step 2</u> Configure the settings for the PTZ connection parameters. See Table 5-20.

Parameter	Description	
Channel	In the Channel list, select the channel that you want to connect the PTZ	
Channel	camera to.	
	Local: Connect through RS-485 port or coaxial cable.	
PTZ Type	• Remote: Connect through network by adding IP address of PTZ	
	camera to the Device.	
	In the Control Mode list, select Serial or HDCVI. For HDCVI series	
Control Mode	product, select HDCVI. The control signal is sent to the PTZ through the	
Control Mode	coaxial cable. For the serial mode, the control signal is sent to the PTZ	
	through the RS-485 port.	
Protocol	In the <b>Protocol</b> list, select the protocol for the PTZ camera, for example,	
FIOLOCOI	select HDCVI3.0.	
Address	In the Address box, enter the address for PTZ camera. The default is 1.	
Address		

Parameter	Description	
	The entered address must be the same with the address configured	
	the PTZ camera; otherwise the PTZ camera cannot be controlled from	
the Device.		
Baudrate	In the Baudrate list, select the baudrate for the PTZ camera. The default	
Dauurale	is 9600.	
Data Bits	The default is 8.	
Stop Bits	The default is 1.	
Parity	The default is NONE.	

Step 3 Click **Apply** to save the settings.

Click **Copy** to copy the settings to other channels.

# **5.4.2 Working with PTZ Control Panel**

PTZ control panel performs the operations such as directing camera in eight directions, adjusting zoom, focus and iris settings, and quick positioning.

### Basic PTZ Control Panel

Right-click on the live view screen and then select **PTZ**. The PTZ control panel is displayed. See Figure 5-56.

Figure 5-56

 $\square$ 

The functions with buttons in gray are not supported by the system.

Parameter	Description		
Speed	Controls the movement speed. The bigger the value is, the faster the movement will be.		
Zoom	E: Zoom out. E: Zoom in.		
Focus	E: Focus far. Focus near.		

Parameter	Description	
Iris	E: Image darker. Image brighter.	
PTZ movement	Supports eight directions.	
Ĩ	<ul> <li>Fast positioning button.</li> <li>Positioning: Click is to enter the fast positioning screen, and then click anywhere on the live view screen, the PTZ will turn to this point and move it to the middle of the screen.</li> <li>Zooming: On the fast positioning screen, drag to draw a square on the view. The square supports zooming.</li> <li>Dragging upward is to zoom out, and dragging downward is to zoom in.</li> <li>The smaller the square, the larger the zoom effect.</li> <li>Not all models support this function and can only be controlled through mouse operations.</li> </ul>	
•	Click , you can control the four directions (left, right, up, and down) PTZ movement through mouse operation.	
►	Click to open the expanded PTZ control panel.	

# Expanded PTZ Control Panel

On the basic PTZ control panel, click to open the expanded PTZ control panel to find more options. See Figure 5-57.

 $\square$ 

- The functions with buttons in gray are not supported by the system.
- Right-click once to return to the interface of PTZ basic control panel.

Ÿ			the <b>MENU OPERATION</b> interface.

# **5.4.3 Configuring PTZ Functions**

## **5.4.3.1 Configuring Presets**

Step 1 On the Expanded PTZ Control Panel, click

The Preset interface is displayed. See Figure 5-58.

Figure 5-58

PTZ			
Preset	Tour	Pattern	Border
		Preset 1	
			Setting
<b>v</b>			

- <u>Step 2</u> Click the direction arrows to the required position.
- Step 3 In the **Preset** box, enter the value to represent the required position.
- <u>Step 4</u> Click **Setting** to complete the preset settings.

## 5.4.3.2 Configuring Tours

Step 1 On the Expanded PTZ Control Panel, click

The **PTZ** interface is displayed.

Step 2 Click the **Tour** tab.

The **Tour** tab is displayed. See Figure 5-59.

Figure 5-59

PTZ			
Preset	Tour	Pattern	Border
		ļ	set 1 rol No. 0 Add Preset Del Preset Del Tour

- <u>Step 3</u> In the **Patrol No**. box, enter the value for the tour route.
- <u>Step 4</u> In the **Preset** box, enter the preset value.
- Step 5 Click Add Preset.

A preset will be added for this tour.

 $\square$ 

- You can repeat adding more presets.
- Click **Del Preset** to delete the preset for this tour. This operation can be repeated to delete more presets. Some protocols do not support deleting.

## 5.4.3.3 Configuring Patterns

Step 1 On the Expanded PTZ Control Panel, click

The **PTZ** interface is displayed.

Step 2 Click the **Pattern** tab.

The **Pattern** interface is displayed. See Figure 5-60.

Figure 5-60

- <u>Step 3</u> In the **Pattern** box, enter the value for pattern.
- <u>Step 4</u> Click **Start** to perform the directions operations. You can also go to the PTZ Control Panel to perform the operations of adjusting zoom, focus, iris, and directions.
- <u>Step 5</u> On the **PTZ** interface, click **End** to complete the settings.

## 5.4.3.4 Configuring AutoScan

Step 1 On the Expanded PTZ Control Panel, click

The **PTZ** interface is displayed.

- Step 2 Click the Border tab.
  - The Border interface is displayed. See Figure 5-61.

Step 3 Click the direction arrows to position the left and right borders.

# **5.4.4 Calling PTZ Functions**

After you have configured the PTZ settings, you can call the PTZ functions for monitoring from the Expanded PTZ Control Panel. See Figure 5-62.

### 5.4.4.1 Calling Presets

Step 1 On the Expanded PTZ Control Panel, in the No. box, enter the value of the preset that you want to call.

<u>Step 2</u> Click to call the preset.

Step <u>3</u> Click again to stop calling the preset.

### 5.4.4.2 Calling Tours

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the tour that you want to call.
- Step 2 Click to call the tour.
- Step 3 Click again to stop calling the tour.

### 5.4.4.3 Calling Patterns

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the pattern that you want to call.
- Step 2 Call to call the pattern.

The PTZ camera moves according to the configured pattern repeatedly.

Step 3 Click again to stop calling the pattern.

### 5.4.4.4 Calling AutoScan

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the border that you want to call.
- Step 2 Click

The PTZ camera performs scanning according to the configured borders.

Step 3 Click again to stop auto scanning.

## 5.4.4.5 Calling AutoPan

Step 1 On the Expanded PTZ Control Panel, click 2 to start moving in horizontal direction.

Step 2 Click again to stop moving.

### 5.4.4.6 Using AUX Button

On the Expanded PTZ Control Panel, click , the AUX setting interface is displayed. See Figure 5-63.

- In the **Direct Aux** list, select the option that corresponds to the applied protocol.
- In the Aux Num box, enter the number that corresponds to the AUX switch on the decoder.

Figure 5-63

AUX		
Direct Aux		
NONE 🔻	On	Off
Aux Num		
1	On	Off

# 5.4.5 Calling OSD Menu

For the coaxial camera, you can call the OSD menu through the Expanded PTZ Control Panel. See Figure 5-62.

Step 1 On the Expanded PTZ Control Panel, click

The **MENU OPERATION** interface is displayed. See Figure 5-64.

Figure 5-64

Step 2 Click Enter.

The OSD menu is displayed. See Figure 5-65. Figure 5-65

- <u>Step 3</u> On the **MENU OPERATION** interface, click the arrow button to select the onscreen parameters.
- <u>Step 4</u> Click **Enter** to complete the settings.

# 5.5 Configuring Camera Settings

# 5.5.1 Configuring Image Settings

You can configure the image settings such as saturation, contrast, brightness, sharpness for each connected camera.

#### Step 1 Select Main Menu > CAMERA > IMAGE.

The **IMAGE** interface is displayed. See Figure 5-66 for analog channel and Figure 5-67 for digital channel.

CAMERA					LIVE		•
MAGE	Channel	10

REGISTRATION			Contrast		•		
COAXIAL UPGRADE			Sharpness		•		
					More Se	tting	

Figure 5-67

<u>Step 2</u> Configure the settings for the image parameters. See Table 5-23.

On the digital channel interface, click **More Setting** to display more parameters. Table 5-23

Parameter	Description					
Channel	In the <b>Channel</b> list, select the channel that you want to configure.					
Cable Type	In the <b>Cable Type</b> list, select the cable type that the camera uses.					
	Not all models support this function.					
Period	In the Period list, select a time period for the image settings. The					
Fenou	image settings will be only used during the selected period.					
	Enable the effective function.					
Effective Time	In the Effective Time box, enter the start time and end time for the					
	period you selected.					
	Adjusts the color shades. The bigger the value, the lighter the color					
	will become. This value does not influence the general image					
Saturation	lightness.					
	The value ranges from 0 to 100. The default value is 50. The					
	recommended range is between 40 and 60.					

Parameter	Description					
	Adjusts the image contrast. The bigger the value is, the more obvious					
Contrast	the contrast between the light area and dark area will become. You					
	can adjust this value when the contrast is not obvious. However, if the					
	value is too big, the dark area is likely to become darker and the light					
	area over exposed. If the value is too small, the image is likely to					
	become dim.					
	The value ranges from 0 to 100. The default value is 50. The					
	recommended range is between 40 and 60.					
	Adjusts the image brightness. The bigger the value is, the brighter the					
	image will become. You can adjust this value when the image as a					
Brightness	whole looks dark or bright. However, the image is likely to become dim					
Diigintiless	if the value is too big.					
	The value ranges from 0 to 100. The default value is 50. The					
	recommended range is between 40 and 60.					
Hue	Adjusts the hue of image. The value ranges from 0 to 100. The default					
	value is 50.					
	Adjusts the sharpness of image edge. The bigger the value is, the					
Sharpness	more obvious the image edge, and the noise is also greater.					
	The value ranges from 1 to 15. The default value is 1.					
Image Enhance	Adjusts the image definition. The bigger the value is, the clearer the					
	image will become, but there will be more noises.					
NR	Reduces the noises from image. The bigger the value is, the better					
	the image will become.					
	In the Config File list, select Day, Night, Normal, or Switch By					
	<b>Period</b> . The system configures the parameters correspondingly.					
	Day: Apply the configuration during daytime.					
Config File	Night: Apply the configuration during nighttime.					
	Normal: Apply the configuration during day and night.					
	• Switch by Period: If you select this option, you need to configure					
	the sunrise time and sunset time where you are located.					
Mirror	Enable the function, the left and right side of the video image will be					
	switched. It is disabled by default.					
	This function specially applies to the image which frame rate is					
3D Denoise	configured as 2 at least. It reduces the noises by making use of the					
	information between two frames. The bigger the value is, the better					
	the effect.					
Flip	In the <b>Flip</b> list, you can select <b>180</b> ° to change the video image display.					
· "٣	By default, the setting is <b>No Flip</b> .					
Light	In the Light list, select Close or Enable to use the backlight					
Light	compensation or not.					

Parameter	Description					
Scene Mode	<ul> <li>Configure the white balance to adjust the general hue of the image.</li> <li>The default setting is Auto.</li> <li>Auto: Automatically apply white balance to different colors to make the image color display normally.</li> <li>Sunny: Apply the threshold value to sunny environment.</li> <li>Night: Apply the threshold value to night.</li> <li>Customized: Manually adjust the Red Gain and Blue Gain values.</li> </ul>					
Day & Night	<ul> <li>Configure the color and black&amp;white mode of the image. This setting is not affected by the configuration files. The default setting is Auto.</li> <li>Color: The camera outputs color image only.</li> <li>Auto: Depends on the camera, such as overall brightness and whether there is an IR light, either color image or black&amp;white image is output.</li> <li>B/W: The camera outputs Black and white image only.</li> <li>By Time: The camera outputs image according to the configured sunrise time and sunset time.</li> </ul>					

<u>Step 3</u> Click **Apply** to complete the settings.

# **5.5.2 Configuring Encode Settings**

## 5.5.2.1 Encode

<u>Step 1</u> Select Main Menu > CAMERA > ENCODE > Encode. The Encode interface is displayed. See Figure 5-68.

Figure 5-68

	CAMERA								LI	VE	L 🗗	¥ 100
	IMAGE	E	ncode		pshot	Encode	Enhanc					
>	ENCODE	CI	hannel		1

Parameter	Description						
Channel	In the <b>Channel</b> list, select the channel that you want to configure the settings for.						
Smart Codec	Enable the smart codec function. This function can reduce the video bit stream for non-important recorded video to maximize the storage space.						
Туре	<ul> <li>Main Stream: In the Type list, select General, MD (Motion Detect), or Alarm.</li> <li>Sub Stream: This setting is not configurable.</li> </ul>						
Compression	<ul> <li>In the Compression list, select the encode mode.</li> <li>H.265: Main profile encoding. This setting is recommended.</li> <li>H.264H: High profile encoding. Low bit stream with high definition.</li> <li>H.264: General profile encoding.</li> <li>H.264B: Baseline profile encoding. This setting requires higher bit stream compared with other settings for the same definition.</li> </ul>						
Resolution	In the <b>Resolution</b> list, select resolution for the video. The maximum video resolution might be different dependent on your device model.						

Parameter	Description					
Frame Rate (FPS)	Configure the frames per second for the video. The higher the value, the clearer and smoother the image will become. Frame rate changes along with the resolution. Generally, in PAL format, you can select the value from 1 through 25; in NTSC format, you can select the value from 1 through 30. However, the specific range of frame rate that you can select depends on the capability of the Device.					
Quality	This function is available if you select <b>VBR</b> in the <b>Bit Rate</b> List. The higher the value, the better the image will become.					
I Frame Interval	The interval between two reference frames.					
Bit Rate (Kb/S)	In the <b>Bit Rate</b> list, select a value or enter a customized value to change the image quality. The bigger the value is, the better the image will become.					
Video	Enable the function for sub stream.					
Audio Encode	<ul> <li>Click More Setting, the More Setting interface is displayed.</li> <li>Audio Encode: This function is enabled by default for main stream. You need to manually enable it for sub stream 1. Once this function is enabled, the recorded video file is composite</li> </ul>					
Audio Source	<ul> <li>audio and video stream.</li> <li>Audio Source: In the Audio Source list, you can select LOCAL and HDCVI.</li> </ul>					
Audio Format	<ul> <li>LOCAL: The audio signal is input from Audio input port.</li> <li>HDCVI: The audio signal is input from HDCVI camera.</li> <li>Audio Format: In the Audio Format list, select a format that you need.</li> </ul>					
Step 3 Click Ap	ply to complete the settings.					

Click Copy to copy the settings to other channels.

## 5.5.2.2 Snapshot

#### Step 1 Select Main Menu > CAMERA > ENCODE > Snapshot.

The **Snapshot** interface is displayed. See Figure 5-69.

Figure 5-69

<ul> <li>&gt; ENCODE</li> <li>OVERLAY</li> <li>PTZ</li> <li>CHANNEL TYPE</li> <li>REGISTRATION</li> <li>COAXIAL UPGRADE</li> </ul>	Manual Snap Channel Mode Image Size Image Quality Interval	1 General 352x240 4 1 Secon	* * •(CIF) *	/Time		
	Default	Сору			Apply	Back

 $\underline{Step \ 2}$  Configure the settings for the snapshot parameters. See Table 5-25.

Table 5-25

Parameter	Description
Manual Snap	In the Manual Snap list, select how many snapshots you want to take
	each time.
Channel	In the Channel list, select the channel that you want to configure the
Channel	settings for.
	In the Mode list, you can select General, Event, or Human Face as
	the event type for which you want to take a snapshot.
	• <b>General</b> : The snapshot is taken during the scheduled period.
Mada	• Event: The snapshot is taken when there is an alarm event
Mode	occurs, such as motion detection event, video loss, and local
	alarms.
	• Human Face: The snapshot is taken when the face is detected.
	The face detection function is support only with the Channel 1.
Imaga Ciza	In the Image Size list, select a value for the image. The bigger the
Image Size	value is, the better the image will become.
	Configures the image quality by 6 levels. The higher the level, the
Image Quality	better the image will become.
	Configures or customizes the snapshot frequency. You can select 1
Interval	second per one snapshot to 7 seconds per one snapshot. The
	maximum is 3600 seconds per one snapshot.

<u>Step 3</u> Click **Apply** to complete the settings.

Click **Copy** to copy the settings to other channels.

### 5.5.2.3 Encode Enhancement

 $\square$ 

- Only some series products support encode enhancement.
- Enabling or disabling this function will take effect after the device is rebooted.

This function is disabled by default. After it is enabled, when main stream resolution is 4K, the frame rate can be 10 fps.

#### Step 1 Select Main Menu > CAMERA > ENCODE > Encode Enhancement.

The Encode Enhancement interface is displayed. See Figure 5-70.

Figure 5-70

	CAMERA				LIVE	💄 🕒 🗸 💯

	COAXIAL UPGRADE					
		Default			Apply	Back
		Derault			Apply	Баск

<u>Step 2</u> Click **L** behind **Encode Enhancement**, to enable this function.

# 5.5.3 Configuring Overlay Settings

You can configure to display system time and channel name on each channel window in the live view screen.

Step 1 Select Main Menu > CAMERA > OVERLAY > Overlay.

The **Overlay** interface is displayed. See Figure 5-71.

Figure 5-71

Table 5-26

Parameter	Description
Channal	In the Channel list, select the channel that you want to configure the
Channel	settings for.
	Select the Time Display check box to display the system time on
Time Display	each channel window in the live view screen.
	In the <b>Time Display</b> list, select time display style.
	Select the Channel Title check box to display the channel name on
Channel Title	each channel window in the live view screen.
	In the <b>Channel Title</b> box, enter the name for the selected channel.
Stop 2 Click A	new to complete the settings

<u>Step 3</u> Click **Apply** to complete the settings.

Click **Copy** to copy the settings to other channels.

# 5.5.4 Configuring Covered Area Settings

<u>Step 1</u> Select Main Menu > CAMERA > OVERLAY > Cover-Area.

The **Cover-Area** interface is displayed. See Figure 5-72.

Figure 5-72

<u>Step 2</u> Configure the settings for the covered area parameters. See Table 5-27. Table 5-27

Parameter	Description
Channel	In the Channel list, select the channel that you want to configure the
Channel	settings for.
	• Preview: Select the <b>Preview</b> check box to apply the configured
Preview	covered block to the selected channel window in the live view
FIEVIEW	screen.
	• Record: Select the <b>Record</b> check box to apply the configured
	covered block to the selected channel window during recording.
	To configure covering block, do the following:
	1. Select the <b>Preview</b> check box or the <b>Record</b> check box, or select
Record	the both. The "1, 2, 3, 4" buttons are activated.
Record	2. Click the buttons to select blocks.
	A triangle solid black block is displayed.
	3. Drag the block to the area that you want to cover and adjust the
	size of the block. You can configure total 4 covered blocks.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.5.5 Configuring Channel Type

You can configure the channel type as Analog or IP channel.

Step 1 Select Main Menu > CAMERA > CHANNEL TYPE.

The **CHANNEL TYPE** interface is displayed. See Figure 5-73.

Figure	5-73

Step 2 Configure the channels.

- Analog Channel: Select the transmission medium such as CVI, CVBS, and then follow the onscreen instructions to complete the settings.
- IP Channel: You can enable the IP channels by disabling the corresponding analog channels. The Device also provides expanded IP channels for your use, such as the 17–32 channels in Figure 5-73.

 $\square$ 

- The 17–32 channels are only for IP camera and the range changes dependent on the model you purchased.
- The channel selection for analog camera or IP camera are in sequence, for example, if you want to select channels for IP camera, you need to select from the last channel number Channel 16 first, which means, you cannot jump to select the channel 15 directly until you have selected the channel 16.

<u>Step 3</u> Click **Apply** and follow the onscreen instructions to complete the settings.

# 5.5.6 Upgrading Coaxial Camera

#### <u>Step 1</u> Select Main Menu > CAMERA > COAXIAL UPGRADE. The COAXIAL UPGRADE interface is displayed. See Figure 5-74.

Figure 5-74

	CAMERA					LIVE 💄 근 → 😤
	IMAGE	Lindata Fila				Browse
	ENCODE	Update File				Browse
	OVERLAY	Device(0/2

	DECISTRATION				V1.000.0002.3.R.201	Dahua
	REGISTRATION					
>	COAXIAL UPGRADE					
						Start Upgrade
_						

Step 2 Click Browse.

The **Browse** interface is displayed.

Step 3 Select the upgrade file and then click **OK**.

The **COAXIAL UPGRADE** interface is displayed.

 $\square$ 

You need to insert the USB storage device that contains the upgrading files.

- <u>Step 4</u> Select the check box of the channel that you want to upgrade.
- Step 5 Click Start Upgrade.

If the upgrading is successful, the system pops up a message indicating the upgrading is completed.

# **5.6 Configuring Remote Devices**

# 5.6.1 Adding Remote Devices

#### $\square$

This function is available after you have configured the channel type as IP channel as described in previous section, see "5.5.5 Configuring Channel Type."

You can add remote devices by adding the IP address.

Select Main Menu > CAMERA > REGISTRATION > Registration, the Registration interface is displayed. See Figure 5-75.

	CAMERA						LIVE

Figure 5-75

Table 5-28

Parameter	Description
Uninitialized	Enable the Uninitialized function, the uninitialized devices out of the
Uninitialized	searched devices are displayed in the searched device list.
Initialize	Select the uninitialized device from the uninitialized device list, and
Initialize	the click Initialize to start initializing device.
	In the Show Filter list, select the remote device type that you want to
	display in the searched device list.
	None: Display all types of devices.
Show Filter	IPC: Display the front-end devices.
	• DVR: Display all storage devices such as NVR, DVR and HCVR.
	• OTHER: Display the devices that do not belong to IPC or DVR
	type.
Searched Device	Displays the searched devices. You can view the device information
List	such as status, IP address.
	Click Device Search, the searched devices display in the searched
	device list.
	To adjust the display sequence, in the title line, you can click the IP
Device Search	address, Manufacturer, Type, MAC Address, Port, or Device Name
Device Search	text. For example, click the IP address text, the sequence icon
	IP Address is displayed.
	"*" is displayed next to the added device.

Parameter	Description
Add	In the Searched Device List area, select the device that you want to
Add	add.
	Add the device by manually configuring settings such as IP address,
Manual Add	channel selection. For details, see "5.6.1.3 Adding Remote Devices
	Manually."
Added Device	Displays the added devices. You can edit and delete the device, and
List	view the device information.
Delete	Select the check box of the added device, and then click Delete to
Delete	delete the added device.
Import	Select the searched devices and then click Import to import the
Import	devices in batches.
Export	Select the added devices and then click Export. The exported
Export	devices information is saved into the USB storage device.

## 5.6.1.1 Initializing Remote Devices

You can reset the password and IP address of the remote devices through initializing. <u>Step 1</u> Click **Device Search**.

The searched devices are displayed in the table. See Figure 5-76.

Figure 5-76

<u>Step 3</u> Select the uninitialized device that you want to initialize.

Step 4 Click Initialize.

The Enter Password interface is displayed. See Figure 5-78.

Figure 5-78

Enter Password	
Using current device password and email info.	
	Next

<u>Step 5</u> Configure the password and email information.

 $\square$ 

If you select the **Using current device password and email info** check box, the remote device automatically uses the current password and email information, so you do not need to set the password and email address again and can go to Step 6.

1) Clear the **Using current device password and email info** check box.

#### The password setting interface is displayed. See Figure 5-79.

Figure 5-79

Enter Passwo	ord	
	Using current de	vice password and email info.
	User	admin
	Password	Use a password that has 8 to 32 characters, it can be a combination of letter(s), number(s) and symbol(s) with at least
		two kinds of them.(please do not use special symbols like ' " ; : &)
	Confirm Password	Next

2) Configure the settings for the password setting parameters. See Table 5-29. Table 5-29

Parameter	Description
User	The default is admin.
Password The password must consist of 8 to 32 non-blank characters an contain at least two types of characters among upper case, low	
Confirm Password	case, number, and special character (excluding"'", """, ";", ":" and "&"). Please enter a strong password according to the password strength bar indication.

3) Click Next.

The **Password Protection** interface is displayed. See Figure 5-80.

Figure 5-80

Password Protection	
🖌 Email Address	To reset password, please input properly or update in time
Back	Next Skip

4) Select the **Email Address** box and enter the email address that you want to reserve for password reset in the future.

 $\square$ 

If you do not want to set the reserved email address, click Skip.

#### Step 6 Click Next.

The **NETWORK** interface is displayed. See Figure 5-81.

Figure 5-81

NETWORK		
Checked Device No.: 1		
O DHCP		
• STATIC		
IP Address	192 . 168 . 1 . 108	Incremental Value 1
Subnet Mask	255 . 255 . 255 . 0	
Default Gateway	192 . 168 . 1 . 1	
1 IP Address		
1 192.168.1.10		
Back		Next Skip

<u>Step 7</u> Configure the IP address.

- Select the **DHCP** check box, you do not need to enter the IP address information, because the system will allocate one IP address to the remote device.
- Select the **STATIC** check box, you need to enter the IP address, subnet mast, default gateway, and incremental value. The system will allocate the IP address to the remote devices by progressively increasing the last part of the IP address when initializing devices in batches.

#### $\square$

When configuring IP address for multiple remote devices which were not in the same network segment, these remote devices will belong to the same network segment after configuration.

#### Step 8 Click Next.

The initializing is started. After the process is completed, see Figure 5-82.

#### Figure 5-82

Device	e Initialization			
Devic	e Initialization Finishe	d

				Finished

<u>Step 9</u> Click **Finished** to complete the settings.

### 5.6.1.2 Adding Remote Devices Automatically

<u>Step 1</u> On the **Registration** interface, click **Device Search** The searched devices are displayed. See Figure 5-83.

Figure 5-83

Step 2 Select the check box of the device.

Step 3 Click Add.

The device is added into the **Added Device** area.

- You can also double-click the device to add it into the Added Device area.
- You can add devices in batches.

#### 5.6.1.3 Adding Remote Devices Manually

Step 1 On the Registration interface, click Manual Add.

The Manual Add interface is displayed. See Figure 5-84.

Manual Add	
Channel	21 🔹
Manufacturer	Onvif 🔹
IP Address	192.168.0.0
RTSP Port	554
HTTP Port	80
User Name	admin
Password	
Remote Channel	1
Decoder Buffer	Default 👻
Encrypt	
● Auto ○ TCP ○	UDP 🔿 MULTICAST
	OK Back

<u>Step 2</u> Configure the settings for the manual adding device parameters. See Table 5-30. Table 5-30

Parameter	Description
Channel	In the Channel list, select the channel that you want use on the
Channel	Device to connect the remote device.
Manufacturer	In the Manufacturer list, select the manufacturer of the remote
Manufacturer	device.
	In the IP Address box, enter the IP address of remote device.
IP Address	
	The default is 192.168.0.0 which the system cannot connect to.
RTSP Port	The default value setting is 554. You can enter the value according to
RISPFOIL	your actual situation.
	The default value setting is 80. You can enter the value according to
HTTP Port	your actual situation.
	If you enter other value, for example, 70, and then you should enter
	70 after the IP address when logging in the Device by browser.
User Name	Enter the user name of the remote device.
Password	Enter the password of the user for the remote device.
Remote Channel	Enter the remote channel number of the remote device that you want

Figure 5-84

Parameter	Description	
	to add.	
Decoder Buffer	the Decoder Buffer list, select Default, Realtime, or Fluent.	
Protocol Type	<ul> <li>If the remote device is added through private protocol, the default type is TCP.</li> <li>If the remote device is added through ONVIF protocol, the system supports Auto, TCP, UDP, or MULTICAST.</li> <li>If the remote device is added through other manufacturers, the system supports TCP and UDP.</li> </ul>	
Encrypt	If the remote device is added through ONVIF protocol, selecting the <b>Encrypt</b> check box will provide encryption protection to the data being transmitted.	

<u>Step 3</u> Click **Apply** to save the settings.

Ш

- Only one device can be added manually at one time.
- Indicates successful connection and I indicates connection failed.

## 5.6.1.4 Modifying or Deleting Remote Devices

You can modify and delete the added devices.

• To modify the remote devices, do the following:

Step 1 Click or double-click a device.

The Edit interface is displayed. See Figure 5-85.

Figure 5-85

Edit	
Channel	10 -
Manufacturer	Onvif 🔹
IP Address	192.168.1.123
RTSP Port	554
HTTP Port	80
User Name	admin
Password	•••••
Remote Channel	1
Decoder Buffer	Default 🔹
● Auto ○ TCP ○	
Сору	OK Back

Step 2 In the Channel list, select the channel that you want to modify settings for.

<u>Step 3</u> Click **OK** to save the settings.

 $\square$ 

Click Copy to copy the user name and password to other channels.

- To delete one or more added devices, do the following:
  - $\diamond$  Click **to** delete one device.
  - Select the check box of the devices that you want to delete, and then click **Delete**.

## 5.6.1.5 Modifying IP Address

You can modify a single IP address or multiple IP addresses of remote devices at one time.

• To modify a single IP address, do the following:

Step 1 In the Searched Device list area, click for the device that you want to modify IP.

The Modify IP interface is displayed. See Figure 5-86.

Figure 5-86

Modify IP		
	100 100 0 100	
IP Address	192 . 168 . 3 . 133	
Subnet Mask	255 . 255 . 0 . 0	
Default Gateway	192 . 168 . 0 . 1	
User Name	admin	
Password		
Add		
	ОК	Back

- <u>Step 2</u> Configure the settings for IP address, subnet mask, default gateway, user name, and password.
- Step 3 Enable the Add function to add the device into the Added Device area.
- <u>Step 4</u> Click **OK** to save the settings.
- To modify IP address in batches, do the following:
- <u>Step 1</u> In the Searched Device list area, select the devices that you want to modify IP address in batches.
- Step 2 Click

The Modify IP interface is displayed. See Figure 5-87.

Figure 5-87

- <u>Step 3</u> Enable the **Batch Modify** function.
- <u>Step 4</u> Configure the settings for start IP address (the IP address is allocated in sequence), subnet mask, default gateway, user name, and password.
- Step 5 Enable the Add function to add the devices into the Added Device area.
- <u>Step 6</u> Click **Apply** to save the settings.

## 5.6.1.6 Exporting IP Address

You can export the added IP address to the USB storage device.

Ш

The exported information is saved in .csv file, which includes IP address, port number, channel number, manufacturer, user name, and password.

- <u>Step 1</u> Insert the USB storage device to the USB port of the Device.
- Step 2 Click Export.

The Browse interface is displayed. See Figure 5-88.

File Backup Encryptic	on <b>E</b>				
New Folder			ОК	Back	

Step 3 Configure the save path.

<u>Step 4</u> Click **OK** to save the settings.

A pop-up message indicating "Successfully exported" is displayed.

Step 5 Click OK.

```
Ш
```

When exporting IP address, the **File Backup Encryption** check box is selected by default. The file information includes IP address, port, channel number, manufacturer, user name, and password.

- If you select the File Backup Encryption check box, the file format is .backup.
- If you clear the **File Backup Encryption** check box, the file format is .csv. In this case, there might be a risk of data leakage.

#### 5.6.1.7 Importing IP Address

You can add remote devices by importing IP address information.

- <u>Step 1</u> Insert the USB storage device to the USB port of the Device.
- Step 2 Click Import.

The Browse interface is displayed. See Figure 5-89.

Figure 5-89

Browse				
Device Name	sda5(USB DISK)	<ul> <li>Refresh</li> </ul>		
Total Space	15.60 GB			
Free Space	15.60 GB			
Address	/			
Name		Size	Туре	Delete
🗅 IP			Folder	±.
RemoteConfig_20	)171103141044.csv	464 B	File	±.
Config File				
			ОК	Back

Step 3 Select the file that you want to import.

<u>Step 4</u> Click **OK** to start importing.

After importing is completed, a pop-up message indicating "The import succeeded" is displayed.

Ш

If the IP address that you want to import already exists in the Device, the system will pop up a message to ask you whether to overwrite the existing content.

- Click **OK** to replace the existing one.
- Click Cancel to add it as a separate device in the Added Device area.

- You can edit the exported .csv file and be cautious not to change the file format; otherwise the file cannot be imported as it will be judged as invalid.
- The language of .csv file must match the Device language.
- The import and export through customized protocol is not supported.

# 5.6.2 Managing Remote Devices

You can view the status of remote devices and upgrade.

### 5.6.2.1 Viewing Status

You can view the device information such as connection status, IP address, motion detection, video loss detection, camera name, and manufacturer.

Select **Main Menu > CAMERA > REGISTRATION > Status**, the **Status** interface is displayed. See Figure 5-90.

Figure 5-90

CAMERA						LIVE 💄 🕂 🗸	00
IMAGE	Registration	Status	Firmware	Upgrade			
ENCODE	Device Status						
OVERLAY	Channel	Status	IP Address	MD	Video Loss	Tampering	
PTZ	11		192.168.1.123				
CHANNEL TYPE							
> REGISTRATION							
COAXIAL UPGRADE							
	Refresh						
					<sup>11</sup>		

### 5.6.2.2 Viewing Firmware Information

You can view the device firmware information such as channel number, IP address, manufacturer, system version, video input, audio input, and alarm in.

Select Main Menu > CAMERA > REGISTRATION > Firmware, the Firmware interface is displayed. See Figure 5-91.

Figure 5-91

## 5.6.2.3 Upgrading Remote Devices

<u>Step 1</u> Select Main Menu > CAMERA > REGISTRATION > Upgrade. The Upgrade interface is displayed. See Figure 5-92.

#### Figure 5-92

									LIVE	<b>1</b> .	99 0.0
	IMAGE	Registra	ation	Stat		Firmware	Upgra	ade

	CHANNEL TYPE										
>	REGISTRATION										
	COAXIAL UPGRADE										
							File Upgrade	Manual Check	Online U	pgrade	

Step 2 Upgrade the device.

- File Upgrade
- Insert a USB storage device containing the upgrade files into the USB port of the Device.
- 2) Select the devices that you want to upgrade.
- 3) Click File upgrade.

The File Upgrade interface is displayed.

- 4) Select the upgrading files and click **Apply**.
- Online Upgrade
- Click Detect or select the check box the device that you want to upgrade and click Manual Check.

The system starts detecting if there is a new version on the online server.

- 2) Select the check box of all the devices that have new version.
- 3) Click Online Upgrade.

- The system will pop up a message to indicate if the upgrading is successful.
- You can use the Type list to filter the devices so that you can find the devices quickly.

# **5.7 Configuring Record Settings**

You can record video manually or automatically and configure the recording settings to main stream and sub stream respectively.

# 5.7.1 Enabling Record Control

- Manual recording operation requires the user have the permission to access STORAGE settings.
- Check to ensure the HDD installed in the Device has been formatted properly.

To enter the record control interface, do the following:

<u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed. On the shortcut menu, select **Manual > Record Control**.

The **RECORD** interface is displayed, see Figure 5-93.

Figure 5-93

CORD

Step 2 Configure the settings for the record control parameters. See Table 5-31.

Table 5-31

Parameter	Description						
Channel	Displays all the analog channels and the connected digital channels.						
Channel	You can select a single channel or select All.						
	• Auto: Automatically record according to the record type and						
	recording time as configured in the recording schedule.						
Record status	• Manual: Keep general recording for 24 hours for the selected						
	channel.						
	• Stop: Do not record.						
Snapshot status	Enable or disable the scheduled snapshot for the corresponding						
Shapshot status	channels.						

Step 3 Click Apply.

# 5.7.2 Configuring Recorded Video Storage Schedule

You need to configure the storage schedule for the recorded video so that the recorded video can be saved. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule."

# **5.8 Configuring Snapshot Settings**

# 5.8.1 Configuring Snapshot Trigger

The snapshot is divided into scheduled snapshot, event triggered snapshot, and face detection triggered snapshot. When the both are enabled, the event triggered snapshot has the priority.

- If there is no alarm event, the system performs scheduled snapshot.
- If there is any alarm event, the system performs event triggered snapshot.

#### 5.8.1.1 Configuring Scheduled Snapshot

- Step 1 Right-click on the live view screen, the shortcut menu is displayed.
- <u>Step 2</u> On the shortcut menu, select **Manual > Record Control**. The **RECORD** interface is displayed.
- Step 3 In the **Snapshot** area, enable the snapshot for the channels if needed. See Figure 5-94.

		Default Test							Apply	′	Back

<u>Step 2</u> Enable the FTP function and configure the parameters. For details, see "5.18.9 Configuring FTP Storage Settings."

The snapshots will be uploaded to FTP for backup.

# 5.9 Playing Back Video

# 5.9.1 Enabling Record Control

- Manual recording operation requires the user have the permission to access **STORAGE** settings.
- Check to ensure the HDD installed in the Device has been formatted properly.

To enter the record control interface, do the following:

<u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed. On the shortcut menu, select **Manual > Record Control**. The **RECORD** interface is displayed, see Figure 5-101.

#### Figure 5-101

<u>Step 2</u> Configure the settings for the record control parameters. See Table 5-32. Table 5-32

Parameter	Description
Channel	Displays all the analog channels and the connected digital channels.
Channel	You can select a single channel or select All.
Record status	<ul> <li>Auto: Automatically record according to the record type and recording time as configured in the recording schedule.</li> <li>Manual: Keep general recording for 24 hours for the selected</li> </ul>
	<ul><li>channel.</li><li>Stop: Do not record.</li></ul>
Snapshot status	Enable or disable the scheduled snapshot for the corresponding
•	channels.

# 5.9.2 Instant Playback

You can use the instant playback function to play back the previous five minutes to sixty minutes of the recorded video in any channel. For details about instant playback function, see "5.2.2.1 Instant Playback."

# 5.9.3 Main Interface of Video Playback

You can search for and play back the recorded video saved on the Device.

Select Main Menu > VIDEO, the video search interface is displayed. See Figure 5-102.

#### Figure 5-102

Table 5-33

No.	Function	Description
		Display the searched recorded video or picture. It supports playing
		in single-channel, 4-channel, 9-channel, and 16-channel
		simultaneously.
1	Display Window	
•		When playing back in a single channel mode, hold down the left
		mouse button to select the area that you want to enlarge. The area
		is enlarged after the left mouse button is released. To exit the
		enlarged status, right-click on the image.
2	Playback	Playback control buttons. For details about the control buttons, see
2	Controls Bar	"5.9.3.1 Introducing Playback Controls."

No.	Function	Description
3	Time Bar	<ul> <li>Display the type and time period of the current recorded video.</li> <li>In the 4-channel layout, there are four time bars are displayed; in the other view layouts, only one time bar is displayed.</li> <li>Click on the colored area to start playback from a certain time.</li> <li>In the situation when you are configuring the settings, rotate the wheel button on the time bar, the time bar is zooming in from 0. In the situation when playback is ongoing, rotate the wheel button on the time bar, the time bar is zooming from the time point where the playback is located.</li> <li>Time bar colors: Green indicates general type; Red indicates external alarm; Yellow indicates motion detection; Blue indicates intelligent events; Purple indicates POS events.</li> <li>For some models, when you are clicking on the blank area in the time bar, the system automatically jumps to the next time point where there is a recorded video located.</li> </ul>
4	Play Status	Includes two playback status: <b>Play</b> and <b>Stop</b> .
5	Sync	Select the <b>Sync</b> check box to simultaneously play recorded videos of different channels in the same period in multi-channel view.
6	Record type	Select the check box to define the recording type to search for.
7	Search type	Select the content to play back: <b>Record</b> , <b>PIC</b> , <b>Splice Playback</b> . For details about the selecting search type, see "5.9.3.2 Selecting Search Type."
8	Calendar	Click the date that you want to search, the time bar displays the corresponding record. The dates with record or snapshot have a small solid circle under the date.
9	View Layout and Channel Selection	<ul> <li>In the CAM NAME list, select the channel(s) that you want to play back.</li> <li>The window split is decided by how you select the channel(s). For example, if you select one channel, the playback is displayed in the single-channel view; if you select two to four channels, the playback is displayed in the four-channel view. The maximum is eight channels.</li> <li>Click to switch the streams. Indicates main stream, and indicates sub stream.</li> </ul>
10	Video Splice	Splice a section of recorded video and save it. For details about splicing a recorded video, see "5.9.3.3 Clipping Recorded Video."
11	Backup	Back up the recorded video files. For details, see "5.9.3.4 Backing up Recorded Video."

No.	Function	Description
		This area includes Mark List and File List.
		• Click the Mark List button, the marked recorded video
12	List Display	list is displayed. Double-click the file to start playing.
12		• Elick the File List button, the searched recorded video
		list is displayed. You can lock the files. For details, see "5.9.8 Using the File List."
10	Full Screen	Click 🖾 to display in full screen. In the full screen mode, point to
13		the bottom of the screen, the time bar is displayed. Right-click on
		the screen to exit full screen mode.
14	Time Bar Unit	You can select 24hr, 2hr, 1hr, or 30min as the unit of time bar. The
14		time bar display changes with the setting.

## 5.9.3.1 Introducing Playback Controls Bar

You can perform the operations such as control the speed of playback, add mark, and take snapshots through the playback controls bar. See Figure 5-103 and Table 5-34.

Figure 5-103

 $\square$ 

The play backward function and playback speed are dependent on the product version. The actual product shall govern. You can also contact the technical support to consult the hardware version information.

Table	5-34

"5.9.5 Marking and Playing Back Video."					
	Hide POS Hide.				
ADDIE M MININ	During single-channel playback, click to display or hide POS information on the screen.				

## 5.9.3.2 Selecting Search Type

You can search the recorded videos, splice, or snapshots from HDD or external storage device.

 From R/W HDD: Recorded videos or snapshots playback from HDD of the Device. See Figure 5-104.

• From I/O Device: Recorded videos playback from external storage device. See Figure 5-105.

Click Browse, select the save path of recorded video file that you want to play.

Double-click the video file or click **l** to start playing.

RECORD

Figure 5-105

## 5.9.3.3 Clipping Recorded Video

During playback, clip sections of recorded video and save to the USB storage device. For the video clip interface, see Figure 5-106.

Figure 5-106

<u>Step 1</u> Select a recorded video that you want to play.

- Click located to start playing from the beginning.
- Double-click anywhere in the time bar colored area to start playback.

Step 2 Click on the time bar to select the start time, and then click K to start clipping.

Step 3 Click on the time bar to select the end time, and then click K to stop clipping.

Step 4 Click

The **BACKUP** dialog box is displayed. You can back up the files.

 $\square$ 

- You can clip the video of a single-channel or multiple channels.
- Maximum 1024 files can be backed up at one time.
- The files that are selected in the File List cannot be clipped.

## 5.9.3.4 Backing up Recorded Video

You can back up the recorded video file or splice video file into the USB storage device.

- <u>Step 1</u> Select the recorded video file that you want to back up. You can select the following two types of files:
  - Recorded video file: Click III, the **File List** area is displayed. Select the file(s) that you want to back up.
  - Splice video file. For details about splicing video file, see "5.9.3.3 Clipping Recorded Video."

Step 2 Click

The **BACKUP** dialog box is displayed. See Figure 5-107.

Figure 5-107

If you do not want to back the file, clear the check box.

# 5.9.4 Smart Search

During playback, you can analyze a certain area to find if there was any motion detection event occurred. The system will display the images with motion events of the recorded video.

Not all models support this function.

To use the Smart Search function, you need to enable the motion detection for the channel by selecting **Main Menu > ALARM > VIDEO DETECT > Motion Detect**.

To use the Smart Search function, do the following:

- <u>Step 1</u> Select **Main Menu > VIDEO**, the video search interface is displayed.
- <u>Step 2</u> In the **CAME NAME** list, select the channel(s) that you want to play.
- Step 3 Click or double-click anywhere in the time bar colored area to start playback.

The grid is displayed on the screen.

 $\square$ 

- Only single-channel supports smart search.
- If multi-channels are selected, double-click on the channel window to display this channel only on the screen, and then you can start using smart search function.
- <u>Step 5</u> Drag the pointer to select the searching area.

#### $\square$

The grid area supports 22×18(PAL) and 22×15(NTSC).

#### Step 6 Click

The screen starts playing back the motional splices of recorded video for the selected searching area.

Step 7 Click

to exit the playback.

# 5.9.5 Marking and Playing Back Video

You can mark the recording for somewhere important. Then you can easily find the marked recording by searching time and mark name.

### Marking a Video

Step 1 Select Main Menu > VIDEO, the video search interface is displayed.

Step 2 In the playback mode, click

The Add Mark dialog box is displayed. See Figure 5-108.

#### Figure 5-108

Add Mark	
Mark Time	
Name	
Default	OK Cancel

<u>Step 3</u> In the **Name** box, enter a name.

Step 4 Click OK.

This marked video file displays in the Mark List.

## Playing Back Marked Video

### $\square$

This function is supported on single-channel playback. <u>Step 1</u> In the **CAME NAME** list, select one channel.

Step 2 Click

The Mark List interface is displayed. See Figure 5-109. Figure 5-109

00:00:00 Q
1
Mark Time Name
03:19:30 123
10:30:34 456
Name
Play time before the mark
0 Sec.
<b>*</b> 5

<u>Step 3</u> Double-click the file that you want to play back.

To search the marked video by time, in the SEARCH box on the top of the interface,

enter the time, and then click

## Playing Back Time before the Mark

You can configure to play N seconds of the marked video before the marked time.

Step 1 In the Name box, enter the name of a marked video.

<u>Step 2</u> In the **Playback time before the mark** box, enter N seconds.

Step 3 Click

The playback starts from N seconds before the marked time.

If there is N seconds exist before the marked time, the playback starts from N seconds before the marked time. If there is not, it plays back as much as there is.

### Managing Marked Video

In the Mark List interface, click Manager interface is displayed. See Figure 5-110.

	Figure 5-110		
Manager			
Channel	5 🔻		
Start Time	2017 - 11 - 08 00 : 00 : 00		
End Time	2017 - 11 - 09 00 : 00 : 00	Search	
2 CH	Mark Time	Name	
1 5	2017-11-08 03:19:30	123	
2 5	2017-11-08 10:30:34	456	
Delete		Cancel	
	he marked videos of the		

- Be default, it manages all the marked videos of the selected channel.
- To search the marked video, select channel number from the Channel list, enter time in Start Time box and End Time box, and then click Search.
- All the marked videos display in time order.
- To modify the name of marked video, double-click a marked video, the Edit Mark dialog box is displayed.
- To delete the marked video, select the marked video, and then click **Delete**.

After opening the Manager interface, the playback will pause until exiting this interface. If the marked video that was in playing back is deleted, the playback will start from the first marked video in the Mark List.

# 5.9.6 Playing Back Snapshots

You can search and play back the snapshots.

- Step 1 Select Main Menu > VIDEO, the video search interface is displayed.
- <u>Step 2</u> In the Search Type list, select PIC.
- <u>Step 3</u> In the **Channel** list, select a channel number.
- <u>Step 4</u> In the **Calendar** area, select a date.

Step 5 Click

The system starts playing snapshots according to the configured intervals.

## 5.9.7 Playing Back Splices

You can clip the recorded video files into splices and then play back at the same time to save your time.

 $\square$ 

Not all models support this function.

- <u>Step 1</u> Select **Main Menu > VIDEO**, the video search interface is displayed.
- Step 2 In the Search Type list, select Splice Playback; In the Split Mode list, select 4, 9, or 16. See Figure 5-111.

Figure 5-111

- <u>Step 3</u> In the **Calendar** area, select a date.
- <u>Step 4</u> In the **CAM NAME** list, select a channel.

Ш

Only single-channel supports this function.

- <u>Step 5</u> Start playing back splices. See Figure 5-112.
  - Click , the playback starts from the beginning.
  - Double-click anywhere on the time bar, the playback starts from where you click. Figure 5-112

### D NOTE

Every recorded video file must be at least five minutes. If a recorded video file is less than 20 minutes but still choose to split into four windows, the system will automatically adjust the windows quantity to ensure every splice is more than five minutes, and in this case it is possible that there are no images are displaying in some windows.

# 5.9.8 Using the File List

You can view all the recorded videos within a certain period from any channel in the File List.

Step 1 Select Main Menu > VIDEO, the video search interface is displayed.

Step 2 Select a channel(s).

Step 3 Click

The **File List** interface is displayed. See Figure 5-113. Figure 5-113

00:00:00 Q

Step 4 Start playback.

Click , the playback starts from the first file by default.

• Click any file, the system plays back this file.

 $\square$ 

- In the time box on the top of the file list interface, you can enter the specific time to search the file that you want to view.
- In the File List area, there are 128 files can be displayed.
- File type: R indicates general recorded video; A indicates recorded video with external alarms; M indicates recorded video with motion detection events; I indicates recorded video with intelligent vents.
- Click to return to the interface with calendar and CAM NAME list.

Locking and Unlocking the Recorded Video

• To lock the recorded video, on the **File List** interface, select the check box of the recorded

video, and then click . The locked video will not be covered.

• To view the locked information, click **FILE LOCKED** interface is displayed.

The recorded video that is under writing or overwriting cannot be locked.

• To unlock the recorded video, in the **FILE LOCKED** interface, select the video, and then click **Unlock**. See Figure 5-114.

# 5.10 Alarm Events Settings

# 5.10.1 Alarm Information

You can search, view and back up the alarm information.

Step 1 Select Main Menu > ALARM > ALARM INFO.

The ALARM INFO interface is displayed. See Figure 5-115.

🔔 ALARM			LIVE 💄 🔂 🗸
ALARM INFO	Туре	All

Figure 5-115

- <u>Step 2</u> In the **Type** list, select the event type; In the **Start Time** box and **End Time** box, enter the specific time.
- Step 3 Click Search.

The search results are displayed.

- Step 4 Click **Backup** to back up the search results into the external storage device.
  - Click ① to play the recorded video of alarm event.
  - Select an event and click **Details** to view the detailed information of the event.

## 5.10.2 Alarm Input Settings

Connect the alarm input and output ports by referring to "4.3 Connecting to Alarm Input and Output." You can configure the alarm settings for each channel individually or apply the settings to all channels and then save the settings.

## 5.10.2.1 Configuring Local Alarms

You can connect the alarm device to the alarm input port of the Device. When the alarm is activated on the alarm device, the alarm information will be uploaded to the Device, and then the Device outputs the local alarms in the way that you configure in this section.

Step 1 Select Main Menu > ALARM > ALARM INPUT > Local.

The Local interface is displayed. See Figure 5-116.

🔔 ALARM					
ALARM INFO	Local	Alarm Box	IPC Ext	IPC Offline	HDCVI Alarm

Table 5-35

Parameter	Description						
Alarm In	Select the channel number.						
Alarm Name	Enter the customized alarm name.						
Enable	Enable or disable the local alarm function.						
Туре	In the <b>Type</b> list, select <b>NO</b> or select <b>NC</b> as the voltage output type.						
	Click Setting to display setting interface.						
Period	Define a period during which the motion detection is active. For details,						
Fellou	see "Setting Motion Detection Period" section in "5.10.4.1 Configuring						
	Motion Detect Settings."						
Anti-Dither Configure the time period from end of event detection to the							
	alarm.						
	Click <b>Setting</b> to display setting interface.						
	General Alarm: Enable alarm activation through the alarm devices						
	connected to the selected output port.						
Alarm Out	• External Alarm: Enable alarm activation through the connected						
	alarm box.						
	Wireless Siren: Enable alarm activation through devices						
connected by USB gateway or camera gateway.							
	Set a length of time for the Device to delay turning off alarm after the						
Latch	external alarm is cancelled. The value ranges from 0 seconds to 300						
	seconds, and the default value is 10 seconds.						

Select the Show Message check box to enable a pop-up message in					
your local host PC.					
Select the Alarm Upload check box to enable the system to upload the					
alarm signal to the network (including alarm center) when an alarm					
event occurs.					
Select the Send Email check box to enable the system to send an					
email notification when an alarm event occurs.					
To use this function, make sure the email function is enabled in Main					
Menu > NETWORK > EMAIL.					
Select the channel(s) that you want to record. The selected channel(s)					
starts recording after an alarm event occurs.					
The recording for local alarm recording and auto recording must be					
enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage					
Schedule" and "5.9.1 Enabling Record Control."					
Click Setting to display the PTZ interface.					
Enable PTZ linkage actions, such as selecting the preset that you want					
to be called when an alarm event occurs.					
Set a length of time for the Device to delay turning off recording after					
the alarm is cancelled. The value ranges from 10 seconds to 300					
seconds, and the default value is 10 seconds.					
Select the <b>Tour</b> check box to enable a tour of the selected channels.					
Select the Snapshot check box to take a snapshot of the selected					
channel.					
To use this function, select Main Menu > CAMERA > ENCODE >					
Snapshot, in the Mode list, select Event.					
Select the check box to enable the function. When an alarm event					
occurs, the extra screen outputs the settings configured in Main					
Menu > DISPLAY > TOUR > Extra Screen.					
<ul> <li>Not all models support this function.</li> </ul>					
<ul> <li>To use this function, extra screen shall be enabled.</li> </ul>					
Select the check box to enable the function. When an alarm event					
occurs, the video output port outputs the settings configured in Main					
Menu > DISPLAY > TOUR.					
Not all models support this function.					
Select the check box to activate a buzzer noise at the Device.					
Select the check box to enable the Device to record a local alarm log.					
Select to enable audio broadcast/voice prompts in response to a local					

 $\square$ 

- Click **Default** to restore the default setting.
- Click **Copy**, in the **Copy** dialog box, select the additional channel(s) that you want to copy the local alarm settings to, and then click **Apply**.

## 5.10.2.2 Configuring Alarms from Alarm Box

You can connect the alarm box to the RS-485 port of the Device. When the alarm is detected by the alarm box, the alarm information will be uploaded to the Device, and then the Device outputs the alarms in the way that you configure in this section.

Step 1 Select Main Menu > ALARM > ALARM INPUT > Alarm Box.

The **Alarm Box** interface is displayed. See Figure 5-117.

	🔔 ALARM							LIVE	<b>.</b> .	0 R

More Setting	Setting				

<u>Step 4</u> Configure the settings for other parameters of the Alarm Box. For details, see Table 5-35.

 $\underline{Step 5}$  Click **OK** to save the settings.

## 5.10.3 Alarm Output Settings

## 5.10.3.1 Configuring Alarm Output

When the Device activates alarms, the connected alarm device generates alarms in the way that you can configure in this section. You can connect to the output port of the Device or connect wirelessly.

- Auto: When an alarm event is triggered on the Device, the connected alarm device generates alarms.
- Manual: The alarm device is forced to keep generating alarms.
- **Stop**: The alarm output function is not enabled.

Step 1 Select Main Menu > ALARM > ALARM OUTPUT > ALARM Out.

The **ALARM OUTPUT** interface is displayed. See Figure 5-122.

🔔 ALARM				LIVE 💄 🕞 🗸 🚟

				Apply Back

Figure 5-122

<u>Step 2</u> Configure the settings for the alarm output. For details, see Table 5-36.

Table 5-36

Parameter		Description
General Alarm	Alarm Type	Select alarm type for each alarm output port.
General Alam	Status	Indicates the status of each alarm output port.
		Select the alarm box number corresponding to the address
Ext. Alarm	Alarm Box	number configured by the DIP switch on the Alarm Box.
	Alarm Type	Select the alarm type for each alarm output ports.

Parameter		Description
	Status	Indicates the status of each alarm output port.
Alarm Release		Click <b>OK</b> to clear all alarm output status.

<u>Step 3</u> Click **Apply** to save the settings.

## 5.10.3.2 Configuring White Light

When the motion detection alarm is activated, the system links the camera to generate white light alarm.

To use this function, connect at least one white light camera to your Device.

Step 1 Select Main Menu > ALARM > ALARM OUTPUT > White Light.

The White Light interface is displayed. See Figure 5-123.

ALARM INFO Alarm Out White Light Siren     ALARM INPUT     ALARM OUTPUT     VIDEO DETECT     ABNORMALITY     Mode     Solid On     Flash Frequency

Figure 5-123

<u>Step 2</u> Configure the settings for the white light parameters. See Table 5-37.

Table 5-37

Parameter	Description
Channel	In the Channel list, select a channel that is connected to a white
Channel	light camera.
	Set a length of time for the Device to delay turning off alarm after
Latch	the alarm is cancelled. The value ranges from 5 seconds to 30
	seconds, and the default value is 5 seconds.
Mode	Set the alarm mode of white light to be <b>Solid on</b> or <b>Flash</b> .

Parameter	Description
Flash Frequency	When setting the alarm mode of white light to be <b>Flash</b> , you can select the flash frequency from <b>Low</b> , <b>Middle</b> , and <b>High</b> .

## 5.10.3.3 Configuring Siren

When the motion detection alarm is activated, the system links the camera to generate sound alarm.

To use this function, connect at least one camera that supports audio function.

```
<u>Step 1</u> Select Main Menu > ALARM > ALARM OUTPUT > Siren.
```

The **Siren** interface is displayed. See Figure 5-124.

	ALARM					_		LIVE

<u>Step 3</u> Select the upgrade audio file (.bin).

<u>Step 4</u> Click **OK** to return to the Siren interface.

Step 5 Click Start Upgrade to upgrade the alarm audio file of the camera.

## 5.10.4 Video Detection

Video detection adopts computer vision and image processing technology. The technology analyzes the video images to detect the obvious changes such as moving objects and blurriness. The system activates alarms when such changes are detected.

### 5.10.4.1 Configuring Motion Detect Settings

When the moving object appears and moves fast enough to reach the preset sensitivity value, the system activates the alarm.

<u>Step 1</u> Select Main Menu > ALARM > VIDIEO DETECT > Motion Detect.

### The **Motion Detect** interface is displayed. See Figure 5-126. Figure 5-126

Enable PIR	<ul> <li>PIR function helps enhancing the accuracy and validity of motion detect. It can filter the meaningless alarms that are activated by the objects such as falling leaves, flies. The detection range by PIR is smaller than the field angle.</li> <li>PIR function is enabled by default if it is supported by the cameras. Enabling PIR function will get the motion detect to be enabled automatically to generate motion detection alarms; if the PIR function is not enabled, the motion detect just has the general effect.</li> <li>Only when the channel type is CVI, the PIR function can be enabled.</li> <li>If the camera does not support PIR function, it will be unusable.</li> <li>If the Device does not support PIR function, it will not be displayed on the interface.</li> </ul>				
Period	Define a period during which the motion detection is active.				

Parameter	Description
Anti-Dither	Configure the time period from end of event detection to the stop of
Anti-Dimer	alarm.
	Click Setting to display setting interface.
	• General Alarm: Enable alarm activation through the alarm
	devices connected to the selected output port.
Alarm Out	• External Alarm: Enable alarm activation through the
	connected alarm box.
	• Wireless Siren: Enable alarm activation through devices
	connected by USB gateway or camera gateway.
	Set a length of time for the Device to delay turning off alarm after
Latch	the external alarm is cancelled. The value ranges from 0 seconds
Luton	to 300 seconds, and the default value is 10 seconds. If you enter 0,
	there will be no delay.
Show Message	Select the <b>Show Message</b> check box to enable a pop-up message
e	in your local host PC.
	Select the Alarm Upload check box to enable the system to
Alarm Upload	upload the alarm signal to the network (including alarm center)
	when an alarm event occurs.
	Select the <b>Send Email</b> check box to enable the system to send an
	email notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in
	Main Menu > NETWORK > EMAIL.
	Select the channel(s) that you want to record. The selected
	channel(s) starts recording after an alarm event occurs.
Record Channel	The recording for motion detection and auto recording function
	must be enabled. For details, see "5.1.4.9 Configuring Recorded
	Video Storage Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ interface.
	Enable PTZ linkage actions, such as selecting the preset that you
PTZ	want to be called when an alarm event occurs.
FIZ	
	Motion Detect can only activate PTZ preset.
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to
POSI RECOID	300 seconds, and the default value is 10 seconds.
	Select the <b>Tour</b> check box to enable a tour of the selected
Tour	channels.
	Select the <b>Snapshot</b> check box to take a snapshot of the selected
	channel.
Snapshot	
	To use this function, select <b>Main Menu &gt; CAMERA &gt; ENCODE &gt;</b>
	Snapshot, in the Mode list, select Event.

Parameter	Description
	Select the check box to enable the function. When an alarm event
	occurs, the extra screen outputs the settings configured in Main
Extra Screen	Menu > DISPLAY > TOUR > Extra Screen.
	<ul> <li>Not all models support this function.</li> </ul>
	• To use this function, extra screen shall be enabled.
	Select the check box to enable the function. When an alarm event
	occurs, the video output port outputs the settings configured in
Video Matrix	Main Menu > DISPLAY > TOUR.
	Not all models support this function.
Buzzer	Select the check box to activate a buzzer noise at the Device.
	Select the check box to enable the Device to record a local alarm
Log	log.
Vaias Dromata	Select to enable audio broadcast/voice prompts in response to a
Voice Prompts	motion detection event.
White Light	Select the check box to enable the white light alarm of the camera.
Siren	Select the check box to enable the sound alarm of the camera.

<u>Step 3</u> Click **Apply** to save the settings.

 $\square$ 

- Click **Default** to restore the default setting.
- Click **Copy**, in the **Copy** dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click **Apply**.
- Click **Test** to test the settings.

#### Setting the Motion Detection Region

Step 1 Next to **Region**, click **Setting**.

The region setting screen is displayed.

- <u>Step 2</u> Point to the middle top of the interface.
  - The setting interface is displayed. See Figure 5-127.

- 1) Select one region, for example, click 10.
- Drag on the screen to select the region that you want to detect. The selected area shows the color that represents the region.

3) Configure the parameters.

Figure 5-128

Parameter Description				
Name Enter a name for the region.				
Sopoitivity	Every region of every channel has an individual sensitivity value.			
Sensitivity	The bigger the value is, the easier the alarms can be activated.			
Thrashold	Adjust the threshold for motion detect. Every region of every channel			
Threshold	has an individual threshold.			

 $\square$ 

When anyone of the four regions activates motion detect alarm, the channel where this region belongs to will activate motion detect alarm.

<u>Step 4</u> Right-click on the screen to exit the region setting interface.

Step 5 On the Motion Detect interface, click Apply to complete the settings.

#### **Setting Motion Detection Period**

The system only activates the alarm in the defined period.

Step 1 Next to Period, click Setting.

The Setting interface is displayed. See Figure 5-129.

Figure 5-129

Step 2 Define the motion detection period. By default, it is active all the time.

- Define the period by drawing.
  - Define for a specified day of a week: On the timeline, click the half-hour blocks to select the active period.
  - $\diamond$  Define for several days of a week: Click  $\square$  before each day, the icon

switches to . On the timeline of any selected day, click the half-hour blocks

to select the active periods, all the days with evaluation will take the same settings.

♦ Define for all days of a week: Click All, all 🛄 switches to 🛄. On the

timeline of any day, click the half-hour blocks to select the active periods, all the days will take the same settings.

- Define the period by editing. Take Sunday as an example.
- 1) Click

The **Period** interface is displayed. See Figure 5-130.

Period	
Current Date:	Sunday
Period 1	00:00 - 24:00
Period 2	00:00 - 24:00
Period 3	00:00 - 24:00
Period 4	00:00 - 24:00
Period 5	00:00 - 24:00
Period 6	00:00 - 24:00
Сору	
🖂 Sunday	🗌 Monday 🔄 Tuesday 📄 Wednesday 📄 Thursday 📄 Friday 📄 Saturday
	OK Back

- 2) Enter the time frame for the period, and then select the check box to enable the settings.
  - $\diamond$  There are six periods for you to set for each day.
  - ♦ Under Copy, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 3) Click **OK** to save the settings.

<u>Step 3</u> On the **Motion Detect** interface, click **Apply** to complete the settings.

## 5.10.4.2 Configuring Video Loss Settings

When the video loss occurs, the system activates the alarm.

<u>Step 1</u> Select Main Menu > ALARM > VIDIEO DETECT > Video Loss.

The Video Loss interface is displayed. See Figure 5-131.

					LIVE	
	ALARM INFO	Motion Detect Vid	eo Loss Tampering	Diagnosis		
	ALARM INPUT	Channel	1			
	ALARM OUTPUT	Enable				
>	VIDEO DETECT					
	ABNORMALITY	Period	Setting	CAM AntiDither	0 Sec.	
		Alarm Out	Setting	Latch	10 Sec.	
		Show Message	🔽 Alarm Upload	Send Email		
		Record Channel				
		PTZ	Setting	Post Record	10 Sec.	
		Tour				
		Snapshot				
		Buzzer	🗹 Log			
		Voice Prompts	None			
		Default Cop			Apply	Back

Figure 5-131

<u>Step 2</u> To configure the settings for the video loss detection parameters, see "5.10.4.1 Configuring Motion Detect Settings."

 $\square$ 

For PTZ activation, different from motion detection, the video loss detection can activate PTZ preset, tour, and pattern.

- Step 3 Click **Apply** to complete the settings.
  - Click **Default** to restore the default setting.
  - Click **Copy**, in the **Copy** dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click **Apply**.

## 5.10.4.3 Configuring Tampering Settings

When the camera lens is covered, or the video is displayed in a single color because of the causes such as sunlight status, the monitoring cannot be continued normally. To avoid such situations, you can configure the tampering alarm settings.

Step 1 Select Main Menu > ALARM > VIDIEO DETECT > Tampering.

The Tampering interface is displayed. See Figure 5-132.

	💄 ALARM					L	IVE	<b>.</b>	<b>₽</b> .	00
	ALARM INFO	Motion Detect	Video Loss	Tampering	Diagnosis

		Snapshot								
		Buzzer	🔽 Log							
		Voice Prompts	None							
		Default	Сору			Apply	/	В	lack	

Figure 5-132

<u>Step 2</u> To configure the settings for the tampering detection parameters, see "5.10.4.1 Configuring Motion Detect Settings."

For PTZ activation, different from motion detection, the video loss detection can activate PTZ preset, tour, and pattern.

- Step 3 Click **Apply** to complete the settings.
  - Click **Default** to restore the default setting.
  - Click **Copy**, in the **Copy** dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click **Apply**.

## 5.10.4.4 Configuring Diagnosis Settings

### $\square$

This function can be used only when it is supported by the camera.

When the video appear the conditions such as blurry, overexposed, or the color changes, the system activates the alarm.

### Step 1 Select Main Menu > ALARM > VIDIEO DETECT > Diagnosis.

The Diagnosis interface is displayed. See Figure 5-133.

	🔔 ALARM					LIV	E   🚨 🗗	, <u>10</u>
	ALARM INFO	Motion Detect	Video Loss	Tampering	Diagnosis			
	ALARM INPUT	Channel	1

	ABNORMALITY	Period Alarm Out	Setting Setting		Latch	10 S	Sec.	
			✓ Alann O	pioau				
		Voice Prompts						
		Default				Apply	Back	

Figure 5-133

- <u>Step 2</u> To configure the settings for the diagnosis parameters, see "5.10.4.1 Configuring Motion Detect Settings."
- Step 3 Click **Apply** to complete the settings.

Click **Default** to restore the default setting.

### Setting the Types for Diagnosing Targets

<u>Step 1</u> Next to **Rule**, click **Setting**.

The **Diagnosis** interface is displayed. See Figure 5-134.

Figure 5-134

Diagnosis		
Stripe	□•	+ 30
Noise	□•	+ 30
Color Cast	□ -—●	+ 30
Out of Focus	□•	+ 30
Overexposure	□•	+ 30
	Apply	Back

<u>Step 2</u> Select the items that you want to diagnose and set the threshold (30 by default). See Table 5-40.

Table 5-40

Parameter	Description			
	A horizontal, vertical or diagonal stripe that might appear in the			
Stripe	video because of device aging or electronic interruption. Such			
	stripe brings visual interruption.			
Noise	Video noises such as blurriness or quality reduction that is caused			
INDISE	by optical distortion or device problem during camera shooting.			
Color Cast	Variances in the normal proportions of RGB colors.			
	Blurry video is caused during camera shooting, transferring and			
Out of Focus	processing. Such condition is a common image quality reduction			
	problem and defined as out of focus.			
	The video brightness refers to the intensity of image pixel. The			
Overexpecture	range is between 0 (the darkest black) and 255 (the brightest			
Overexposure	white). If the brightness exceeds the threshold, the image is over			
	exposed.			
	The range is from 1 through 100. If the value after diagnosing is			
Threshold	higher than what you set, the system activates the alarm to the			
	corresponding diagnosing types such as stripe.			
Step 3 Click Apply	to save the settings.			
The system returns to the <b>Diagnosis</b> interface.				

```
\square
```

Click **Default** to restore the default setting.

# 5.10.5 System Events

You can configure the alarm output for three types of system event (HDD, Network, and User). When there is an abnormal system event occurs, the system activates alarms in the way that you configure in this section.

## 5.10.5.1 Configuring HDD Event Settings

Step 1 Select Main Menu > ALARM > ABNORMITY > HDD.

The **HDD** interface is displayed. See Figure 5-135.

Figure	5-135
--------	-------

alarm					LIV	/E 🛛 💄

					Apply		Back
					Apply		DACK

 $\underline{Step 2} \quad Configure the settings for the HDD event. See Table 5-41.$ 

Table 5-41

Parameter	Description			
	In the Event Type list, select No HDD, HDD Error, or HDD No Space			
Event Type	as the event type.			
Enable	Enable or disable the HDD event detection function.			
	Click <b>Setting</b> to display setting interface.			
	General Alarm: Enable alarm activation through the alarm devices			
	connected to the selected output port.			
Alarm Out	• External Alarm: Enable alarm activation through the connected			
	alarm box.			
	• Wireless Siren: Enable alarm activation through devices			
connected by USB gateway or camera gateway.				
	Set a length of time for the Device to delay turning off alarm after the			
Latch	external alarm is cancelled. The value ranges from 10 seconds to 300			
	seconds, and the default value is 10 seconds.			
Show Maaaaga	Select the Show Message check box to enable a pop-up message in			
Show Message	your local host PC.			
	Select the Alarm Upload check box to enable the system to upload the			
Alarm Upload	alarm signal to the network (including alarm center) when an alarm			
	event occurs.			

Parameter	Description		
	Select the Send Email check box to enable the system to send an		
Send Email	email notification when an alarm event occurs.		
	To use this function, make sure the email function is enabled in Main		
	Menu > NETWORK > EMAIL.		
Buzzer	Select the check box to activate a buzzer noise at the Device.		
Log	Select the check box to enable the Device to record a local alarm log.		
Voice Prompts	Select to enable audio broadcast/voice prompts in response to a HDD		
voice Prompis	alarm event.		

## 5.10.5.2 Configuring Network Event Settings

Step 1 Select Main Menu > ALARM > ABNORMITY > Network.

The **Network** interface is displayed. See Figure 5-136.

# **5.11 Smart Detection**

Smart detection includes SMD, human face and IVS.

The system processes and analyzes video images, abstracts key information from the video, and activates alarms when it detects that person, vehicle, face or behavior matches the detection rule.

 $\square$ 

- Not all models support this function.
- Only the analog channel 1 supports this function. The IP channel does not support this function.
- SMD, face detection function, and IVS function cannot be enabled at the same time.

## 5.11.1 SMD

The system processes and analyzes video images, effectively detects persons and vehicles in the video, and activates alarms. Meanwhile, the system carries out structured storage of the detection result, to search it quickly in the future.

## 5.11.1.1 Configuring SMD Settings

Set SMD parameters. When the Device detects information, the system activates alarms.

#### Step 1 Select Main Menu > SMART DETECTION > PARAMETERS > SMD.

The **SMD** interface is displayed. See Figure 5-139.

Figure 5-139

👰 SMART DETECTI	ON			LIVE	💄 🕒 🗸 📴
SMART SEARCH	SMD	Human Face	IVS		
> PARAMETERS	Channel	1			
SMART PLAN	Enable				
	Sensitivity	Middle			
	Alarm Object	Person	Vehicle		
	Default				Deal
	Default			Apply	Back

<u>Step 2</u> Select the channel and enable.

Step 3 Set parameters. See Figure 5-48.

#### Table 5-45

Parameter	Description				
	Set sensitivity, including high, middle, and low. The higher the				
Sensitivity	sensitivity is, the bigger alarm probability will be, the bigger false				
	alarm rate will be. The system selects middle by default.				
Alarm object	Alarm object Select alarm object, including person and vehicle.				

<u>Step 4</u> Click **Apply** to save configuration.

### 5.11.1.2 Smart Search

Filter SMD videos that meet criteria and play back the videos.

Step 1 Select Main Menu > SMART DETECTION > SMART SEARCH > SMD.

The **SMD** interface is displayed. See Figure 5-140.

Figure 5-140

	😥 SMART DETECTI	ON				[	LIVE 💄 🕁 🗸 🖁	10 72

Figure 5-141

# 5.11.2 Configuring Face Detection

You can configure the face detection settings and search the detected faces in the defined time period.

 $\square$ 

- Not all models support this function.
- Only the analog channel 1 supports this function. The IP channel does not support this function.
- SMD, face detection function, and IVS function cannot be enabled at the same time.

## 5.11.2.1 Configuring Face Detection Settings

When the Device detects the human faces, the system activates alarms.

<u>Step 1</u> Select Main Menu > SMART DETECTION > PARAMETERS > Human Face. The Human Face interface is displayed. See Figure 5-142.

) SMART DETECTIO	DN					LIVE	≗ ⊡-≊
SMART SEARCH	SMD Hum	ian Face	VS				
PARAMETERS	Channel	1					
SMART PLAN	Enable			Rule	Setting		
	Period	Setting					
	Alarm Out	Setting		Latch	10	Sec.

Figure 5-142

Parameter	Description					
	In the Channel list, select the channel that you want to configure					
Channel	the face detection settings.					
	Only the analog channel 1 supports this function.					
Enable	Enable or disable the face detection function.					
	Click <b>Setting</b> to draw areas to filter the target.					
Rule	You can configure two filtering targets (maximum size and					
TUE	minimum size). When the target is smaller than the minimum size					
	or larger than the maximum size, no alarms will be activated. The					
	maximum size should be larger than the minimum size.					
	Define a period during which the detection is active.					
Period	For details, see "Setting Motion Detection Period" section in					
	"5.10.4.1 Configuring Motion Detect Settings."					
	Click Setting to display setting interface.					
	Enable alarm activation function. Select the alarm output port(s) to					
Alarm Out	which the peripheral alarm devices are connected. When an alarm					
	event occurs, the system links the peripheral alarm devices					
	connected to the selected output port.					

Parameter	Description
	Set a length of time for the Device to delay turning off alarm after
Latch	the external alarm is cancelled. The value ranges from 0 seconds
	to 300 seconds. If you enter 0, there will be no delay.
Show Message	Select the <b>Show Message</b> check box to enable a pop-up message
	in your local host PC.
	Select the Alarm Upload check box to enable the system to
Alarm Upload	upload the alarm signal to the network (including alarm center)
	when an alarm event occurs.
	Select the <b>Send Email</b> check box to enable the system to send an
Send Email	email notification when an alarm event occurs.
Send Email	To use this function, make sure the email function is enabled in
	Main Menu > NETWORK > EMAIL.
	Select the channel(s) that you want to record. The selected
	channel(s) starts recording after an alarm event occurs.
Record Channel	The recording for intelligence event and auto recording function
	must be enabled. For details, see "5.1.4.9 Configuring Recorded
	Video Storage Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ interface.
	Enable PTZ linkage actions, such as selecting the preset that you
PTZ	want to be called when an alarm event occurs.
	Face Detect can only link PTZ preset.
	Set a length of time for the Device to delay turning off recording
Post Record	after the alarm is cancelled. The value ranges from 10 seconds to
	300 seconds.
T	Select the Tour check box to enable a tour of the selected
Tour	channels.
	Select the <b>Snapshot</b> check box to take a snapshot of the selected
	channel.
	To use this function, make sure the following settings are

## 5.11.2.2 Searching for Detected Faces

## 

To comply with relevant regulations, the faces have received fuzzy processing.

Step 1 Select Main Menu > SMART DETECTION > SMART SEARCH > Human Face.

The Human Face interface is displayed. See Figure 5-143.

Figure 5-143

> SMART SEARCH       SMD       Human Face       IVS         PARAMETERS       Begin Time       2018 - 11 - 12       00 : 00 : 00       End Time       2018 - 11 - 13       00 : 00 : 00         SMART PLAN       Graph       List       Search       Search		🧕 SMART DETECTI	ON				[	LIVE 💄 🕞 🗸 🔡

### 5.11.2.3 Playing the Detected Faces

<u>Step 1</u> On the displayed faces as shown in Figure 5-144, double-click on the face. The **VIDEO** interface is displayed. See Figure 5-146.

Figure 5-146

<u>Step 2</u> Click **I** to start playing the recorded detected face.

Step 3 Click **Back** to exit the playing interface and return to the faces displaying interface.

# **5.11.3 Configuring IVS Function**

The IVS function processes and analyzes the images to extract the key information to match with the preset rules. When the detected behaviors match with the rules, the system activates alarms.

Ш

The IVS function and face detection function cannot be enabled at the same time.

### 5.11.3.1 Configuring Intelligent Settings

You can configure the intelligent settings for both analog cameras and IP cameras.

- Not all models support this function.
- Please disable the expanded IP channels first before using this function for analog cameras.

#### <u>Step 1</u> Select Main Menu > SMART DETECTION > PARAMETERS > IVS.

The **IVS** interface is displayed. See Figure 5-147.

SMART DETECTION

SMART SEARCH

SMART SEARCH

Add

Figure 5-147

- <u>Step 2</u> In the **Channel** list, select the channel number that you want to configure the IVS function.
- Step 3 Click Add.

One line of rule is displayed. See Figure 5-148.

<b>A</b>							
🧕 SMART DETECTI	ION					LIVE

	1	Rule3	Intrusion 🔻	ľ	\$	ā	
						Add	
						Apply E	Back

Figure 5-148

<u>Step 4</u> Configure the parameters for the rule that you selected.

<u>Step 5</u> Select the check box of the rule to enable it.

<u>Step 6</u> Click **Apply** to complete the settings.

#### 5.11.3.1.1 Configuring Tripwire Rules

When the target object crosses the tripwire in the defined direction, the system activates alarms.

- The tripwire can be configured as a straight line or broken line.
- Supports detecting one-way or two-way tripwire crossing.
- Supports multiple tripwires in the same scenario to meet the complexity.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Tripwire**. See Figure 5-149.

Figure 5-149
--------------

🧕 SMART DETECTIO	N						🗣 🗸 👯

	4						
						Add	
						Apply	Back

Step 2 Draw a tripwire.

- 1) In the **Channel** list, select the channel that you want to configure the rules for.
- 2) Click .

The monitoring screen to configure the tripwire rules is displayed. See Figure 5-150 for analog camera and the IP camera without preset, and see Figure 5-151 for IP camera with preset.

#### Figure 5-150

Figure 5-151

3) Configure the settings for the parameters of drawing rules. See Table 5-47.

Parameter	Description
Name	Enter the customized rule name.
Direction	Set the direction of the tripwire. You can choose A to B (left to
	right), <b>B to A</b> (right to left), and <b>Both</b> .

Parameter	Description			
Filtering Target	Click to draw areas to filter the target. You can configure two filtering targets (maximum size and minimum size). When the target that is crossing the tripwire is smaller than the minimum size or larger than the maximum size, no alarms will be activated. The maximum size should be larger than the minimum size.			
Preset In the <b>Preset</b> list, select the preset that you want to configure the rule for.				

Table 5-47

- 4) Drag to draw a tripwire. The tripwire can be a straight line, broken line or polygon.
- 5) Click **OK** to save the settings.

Step 3 Click to set the actions to be triggered.

The **Trigger** interface is displayed. See Figure 5-152.

Figure 5-152							
Trigger							
Period	Setting						
Alarm Out	Setting	Latch	10	Sec.			
Show Message	🔽 Alarm Upload	🗌 Send Email					
🛃 Record Channel							
PTZ	Setting	Post Record	10	Sec.			
🗌 Tour							
Snapshot							
Extra Screen	🗌 Buzzer 🔽 Log						
Voice Prompts	None 🔻						
White Light	Siren						
			OK	Back			

Step 4 Configure the triggering parameter See Table 5-48.

Table 5-48

Parameter	Description
Period	Click Setting to display set interface.
	Define a period during which the alarm linkage is active. For
	details, see "Setting Motion Detection Period" section in "5.10.4.1
	Configuring Motion Detect Settings."

Parameter	Description
	Click Setting to display setting interface.
	• General Alarm: Enable alarm activation through the alarm
	devices connected to the selected output port.
Alarm Out	• External Alarm: Enable alarm activation through the connected alarm box.
	Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.
	Set a length of time for the Device to delay turning off alarm after
Latch	the external alarm is cancelled. The value ranges from 0 seconds
	to 300 seconds, and the default value is 10 seconds.
Show Message	Select the <b>Show Message</b> check box to enable a pop-up message in your local host PC.
	Select the Alarm Upload check box to enable the system to
Alarm Upload	upload the alarm signal to the network (including alarm center)
	when an alarm event occurs.
	Select the <b>Send Email</b> check box to enable the system to send an
	email notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in
	Main Menu > NETWORK > EMAIL.           Select the channel(s) that you want to record. The selected
	channel(s) starts recording after an alarm event occurs.
Record Channel	
	The recording for intelligence event and auto recording function
	must be enabled. For details, see "5.1.4.9 Configuring Recorded
	Video Storage Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ interface.
PTZ	Enable PTZ linkage actions, such as selecting the preset that you
	want to be called when an alarm event occurs.
	Set a length of time for the Device to delay turning off recording
Post Record	after the alarm is cancelled. The value ranges from 10 seconds to
	300 seconds.
Tour	Select the <b>Tour</b> check box and the channels to enable a tour of the
	selected channels when an alarm event occurs.
	Select the <b>Snapshot</b> check box to take a snapshot of the selected
Onenchat	channel when an alarm event occurs.
Snapshot	To use this function colort Main Marco CAMERA . ENCODE
	To use this function, select Main Menu > CAMERA > ENCODE > Spanshot in the Mode list select Event
	Snapshot, in the Mode list, select Event.

Parameter	Description
Extra Screen	<ul> <li>Select the check box to enable the function. When an alarm event occurs, the extra screen outputs the settings configured in Main Menu &gt; DISPLAY &gt; TOUR &gt; Extra Screen.</li> <li>Not all models support this function.</li> <li>To use this function, extra screen shall be enabled.</li> </ul>
Video Matrix	Select the check box to enable the function. When an alarm event occurs, the video output port outputs the settings configured in "Main Menu > Display > Tour."
Buzzer	Select the check box to activate a buzzer noise at the Device when an alarm event occurs.
Log	Select the check box to enable the Device to record a local alarm log when an alarm event occurs.
Voice Prompts	Select the check box to enable audio broadcast in response to an alarm event.
White Light	Select the check box to activate a white light camera to trigger white light alarm.
Siren	Select the check box to activate an audio camera to trigger audio alert

<u>Step 5</u> Click **OK** to save the settings.

The INTELL SETTING interface is displayed.

<u>Step 6</u> Select the **Enable** check box, and then click **Apply**.

The tripwire detecting function is active. When the target object crosses the tripwire in the defined direction, the system activates alarms.

#### 5.11.3.1.2 Configuring Intrusion Rules

When the target enters and leaves the defined detection area, or the target appears in the defined area, the system activates alarms.

- You can define the shape and quantity of intrusion areas.
- Supports detecting the behaviors that enter and leave the intrusion areas.
- Supports detecting the behaviors that are moving in the intrusion areas. The quantity of areas and lasting time can be configured.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Intrusion**. See Figure 5-153.

						Apply	Back

Figure 5-153

Step 2 Draw an area.

- 1) In the **Channel** list, select the channel that you want to configure the rules for.
- 2) Click

The monitoring screen to configure the intrusion rules is displayed. See Figure 5-154 for analog camera and the IP camera without preset, and see Figure 5-155 for IP camera with preset.

Figure 5-154

Figure 5-155

3) Configure the settings for the parameters of drawing rules. See Table 5-49.

Table 5-49

Parameter	Description				
Name	Enter the customized rule name.				
Action	Configure the actions that are defined as intrusion. You can select				
Action	the Appear check box and the Cross check box.				
Direction	In the <b>Direction</b> list, select the direction of crossing the configured				
Direction	area. You can select Enter&Exit, Enters, and Exits.				
	Click to draw areas to filter the target.				
Filtering Target	You can configure two filtering targets (maximum size and				
Thering larger	minimum size). When the target that is crossing the tripwire is				
	smaller than the minimum size or larger than the maximum size, no				
	alarms will be activated. The maximum size should be larger than				
	the minimum size.				
Preset	In the Preset list, select the preset that you want to configure the				
FIESEL	rule for.				
4) Drag to	draw an area				

- 4) Drag to draw an area.
- 5) Click **OK** to save the settings.

<u>Step 4</u> Select the **Enable** check box, and then click **Apply**.

The intrusion detecting function is active. When the target enters and leaves the area, or the target appears in the defined area, the system activates alarms.

#### 5.11.3.1.3 Configuring Abandoned Rules

When the object is placed in the defined detection area for more than the set time, the system activates alarms.

- You can define the shape and quantity of detecting areas.
- Period value can be configured.
- Supports size filtering for target.

Step 1 On the rule line that you added, in the **Type** list, select **Abandoned**. See Figure 5-156.

Step 3 Click to set the actions to be triggered. For details, see "5.11.3.1.1 Configuring Tripwire Rules."

Period	detecting the missing objects.						
Filtering Target	Click to draw areas to filter the target. NOTE You can configure two filtering targets (maximum size and minimum size). When the target that is crossing the tripwire is smaller than the minimum size or larger than the maximum size, no alarms will be activated. The maximum size should be larger than the minimum size.						
Preset	In the Preset list, select the preset that you want to configure the						
110000	rule for.						
4) Drag to	draw an area						

- 4) Drag to draw an area.
- 5) Click **OK** to save the settings.
- Step 3 Click to set the actions to be triggered. For details, see "5.11.3.1.1 Configuring Tripwire Rules."
- <u>Step 4</u> Select the **Enable** check box, and then click **Apply**.

The missing object detecting function is active. When the target is taken away from the defined area exceeds the set time, the system activates alarms.

## 5.11.3.2 Enabling the Intelligent Settings for IP Camera

- $\square$
- Not all IP cameras support this function.
- The interface might be different depending on the connected IP camera.

After configuring the intelligent settings for IP cameras (refer to 5.11.3.1 Configuring Intelligent Settings"), you still need to enable to apply the configurations. For example, you have configured the intelligent settings for IP camera as displayed in Figure 5-162, and then click **Apply** to save the settings.

👰 SMART DETECTI	ION					LIVE	
SMART SEARCH	SMD	Human Face	IVS				
> PARAMETERS	Channel	1

More Setting	Setting			
Default			OK	Back

<u>Step 4</u> Configure the settings for alarm linkage. For details, see Table 5-52.

Table 5-52

Parameter	Description				
Name	Enter the customized alarm name.				
	Click <b>Setting</b> to display setting interface.				
Period	Define a period during which the motion detection is active. For details,				
T enou	see "Setting Motion Detection Period" section in "5.10.4.1 Configuring				
	Motion Detect Settings."				
	Click <b>Setting</b> to display the PTZ interface.				
PTZ	Enable PTZ linkage actions, such as selecting the preset that you want				
	to be called when an alarm event occurs.				
	Click <b>Setting</b> to display setting interface.				
	• General Alarm: Enable alarm activation through the alarm devices				
	connected to the selected output port.				
Alarm Out	• External Alarm: Enable alarm activation through the connected				
	alarm box.				
	Wireless Siren: Enable alarm activation through devices				
	connected by USB gateway or camera gateway.				
	Set a length of time for the Device to delay turning off alarm after the				
Latch	external alarm is cancelled. The value ranges from 0 seconds to 300				
	seconds, and the default value is 10 seconds.				
	Set a length of time for the Device to delay turning off recording after				
Post Record	the alarm is cancelled. The value ranges from 10 seconds to 300				
	seconds, and the default value is 10 seconds.				
Anti-Dither	Configure the time period from end of event detection to the stop of				
	alarm.				

Parameter	Description
	Select the channel(s) that you want to record. The selected channel(s)
	starts recording after an alarm event occurs.
Record Channel	
Record Channel	The recording for alarm and auto recording must be enabled. For
	details, see "5.1.4.9 Configuring Recorded Video Storage Schedule"
	and "5.9.1 Enabling Record Control."
	Select the Snapshot check box to take a snapshot of the selected
	channel.
Snapshot	
	To use this function, select Main Menu > CAMERA > ENCODE >
	Snapshot, in the Mode list, select Event.
Tour	Select the <b>Tour</b> check box to enable a tour of the selected channels.
Voice Prompts	Select to enable audio broadcast/voice prompts in response to a local
·	alarm event.
	• Show Message: Select the <b>Show Message</b> check box to enable a
	pop-up message in your local host PC.
	• Buzzer: Select the check box to activate a buzzer noise at the
	Device.
	• Video Matrix: Select the check box to enable the function. When
	an alarm event occurs, the video output port outputs the settings
	configured in " <b>Main Menu &gt; DISPLAY &gt; TOUR</b> ."
	Not all models support this function.
	Send Email: Enable the system to send an email notification when
More Setting	an alarm event occurs.
	To use this function, make ours the small function is enabled in Mein
	To use this function, make sure the email function is enabled in <b>Main</b> <b>Menu &gt; NETWORK &gt; EMAIL</b> .
	<ul> <li>Log: Select the check box to enable the Device to record a local</li> </ul>
	alarm log.
	<ul> <li>Extra screen: Select the check box to enable the function. When</li> </ul>
	an alarm event occurs, the extra screen outputs the settings
	configured in <b>Main Menu &gt; DISPLAY &gt; TOUR &gt; Extra Screen</b> .
	Not all models support this function.
	<ul> <li>To use this function, extra screen shall be enabled.</li> </ul>
Stop 5 Click 0	<b>K</b> to save the settings.

 $\underline{Step 5}$  Click **OK** to save the settings.

<u>Step 6</u> On the **Wireless Detector** interface, click **Apply** to complete the settings.

## 5.12.2 Configuring Temperature and Humidity Camera

You can view, search and export the temperature and humidity data of camera with such sensors and configure the alarm event settings.

To use this function, please make sure there is at least one camera with temperature and humidity sensor has been connected to the Device.

## 5.12.2.1 Enabling Detecting Function

You should enable the IoT function the first time when you enter this interface. <u>Step 1</u> On the main menu, select **IoT > MANAGER > Temperature/Humidity**.

Figure 5-180

Step 2 Select the Enable check boxes to enable IoT function. See Figure 5-181.

Figure 5-183

- <u>Step 3</u> Click **Locked** to lock the data. The export button is enabled.
- <u>Step 4</u> Click **Export**. The system starts exporting the data.

After exporting is finished, a  $\ensuremath{\text{Message}}$  dialog box is displayed.

Step 5 Click OK.

You can find the exported data on your USB device.

## 5.12.2.4 Configuring Alarm Linkage

You can configure alarm linkage settings for temperature and humidity data.

#### 5.12.2.4.1 Configuring Alarm Linkage for Temperature Data

<u>Step 1</u> On the main interface, select **IoT > MANAGER > Temperature/Humidity**. The **Temperature/Humidity** interface is displayed. See Figure 5-184.

🕥 loT						
REALTIME DISPLAY	Sensor Pairing	J Tempe	rature/Hu	Wireless Detector	Wireless Siren

Record CH				
Snapshot				
Tour				
Voice Prompts	None			
More Setting	Setting			
Default			Save	Back

<u>Step 3</u> Configure the settings for alarm linkage. See Table 5-53.

Table 5-53

Parameter	Description
Access Point	Indicates the channel that the camera is connected to.
Туре	Temperature by default.
Detect Position Name	Set the detect position name.
Preview Channel	Select the channel that you want to preview to help monitor the channel of access point. This channel could be the channel of access point or any other channels according to your actual situation.
Event Type	Select event type as <b>High</b> or <b>Low</b> , and set the upper and low temperature limit respectively. For example, select event type as
Upper Limit	<b>High</b> and set upper limit as <b>28</b> , the alarm occurs when the temperature reaches $28^{\circ}$ C.
Enable	Enable the alarm function.
Period	Define a period during which the alarm setting is active. For more information about setting the period, see "5.10.4.1 Configuring Motion Detect Settings."
Alarm Out	<ul> <li>Click Setting to display setting interface.</li> <li>General Alarm: Enable alarm activation through the alarm devices connected to the selected output port.</li> <li>External Alarm: Enable alarm activation through the connected alarm box.</li> <li>Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.</li> </ul>
PTZ	Click <b>Setting</b> to display the PTZ interface. Enable PTZ linkage actions, such as selecting the preset that you want to be called when an alarm event occurs.
Latch	Set a length of time for the Device to delay turning off alarm after the external alarm is cancelled. The value ranges from 0 seconds to 300 seconds, and the default value is 10 seconds. If you enter 0, there will be no delay.
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the default value is 10 seconds.
Anti-Dither	Configure the time period from end of event detection to the stop of alarm.
Snapshot	Select the check box to take a snapshot of the selected channel.

Parameter	Description					
Record CH	Select the channel(s) that you want to record. The selected channel(s) starts recording after an alarm occurs.					
Record CH	The recording for IoT alarms and auto recording function must be enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.9.1 Enabling Record Control."					
Tour	Select the check box to enable a tour of the selected channels.					
Voice Prompts	Select to enable audio broadcast/voice prompts in response to a temperature alarm event.					
More Setting	<ul> <li>Show Message: Select the Show Message check box to enable a pop-up message in your local host PC.</li> <li>Buzzer: Select the check box to activate a buzzer noise at the Device.</li> <li>Video Matrix: Select the check box to enable the function. When an alarm event occurs, the video output port outputs the settings configured in "Main Menu &gt; DISPLAY &gt; TOUR."</li> <li>Not all models support this function.</li> <li>Send Email: Enable the system to send an email notification when an alarm event occurs.</li> <li>To use this function, make sure the email function is enabled in Main Menu &gt; NETWORK &gt; EMAIL.</li> <li>Log: Select the check box to enable the Device to record a local alarm log.</li> <li>Extra screen: Select the check box to enable the function.</li> </ul>					
	<ul> <li>When an alarm event occurs, the extra screen outputs the settings configured in Main Menu &gt; DISPLAY &gt; TOUR &gt; Extra Screen.</li> <li>Not all models support this function.</li> <li>To use this function, extra screen shall be enabled.</li> </ul>					

<u>Step 4</u> Click **Save** to save the settings.

#### 5.12.2.4.2 Configuring Alarm Settings for Humidity Data

You can configure the alarm event by setting the humidity data.

<u>Step 1</u> On the main interface, select **IoT > MANAGER > Temperature/Humidity**.

The **Temperature/Humidity** interface is displayed. See Figure 5-186.

🕥 IoT						
REALTIME DISPLAY	Sensor Pairing	Tempe	rature/Hu	Wireless Detector	Wireless Siren

Step 3 Configure the settings for the following parameters. See Table 5-54.

Table 5-54

Parameter	Description
Access Point	Indicates the channel that the camera is connected to.
Туре	Humidity by default.
Detect Position Name	Set the detect position name.
Preview Channel	Select the channel that you want to preview to help monitor the channel of access point. This channel could be the channel of access point or any other channels according to your actual situation.
Event Type	Select event type as <b>High Humidity</b> or <b>Low Humidity</b> , and set the upper and low humidity limit respectively. For example, select
Upper Limit	event type as <b>High Humidity</b> and set upper limit as <b>60</b> , the alarm occurs when the humidity reaches 60%RH.
Enable	Enable the alarm function.
Period	Define a period during which the alarm setting is active. For more information about setting the period, see "5.10.4.1 Configuring Motion Detect Settings."
Alarm Out	<ul> <li>Click Setting to display setting interface.</li> <li>General Alarm: Enable alarm activation through the alarm devices connected to the selected output port.</li> <li>External Alarm: Enable alarm activation through the connected alarm box.</li> <li>Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.</li> </ul>
PTZ	Click <b>Setting</b> to display the PTZ interface. Enable PTZ linkage actions, such as selecting the preset that you want to be called when an alarm event occurs.
Latch	Set a length of time for the Device to delay turning off alarm after the external alarm is cancelled. The value ranges from 0 seconds to 300 seconds, and the default value is 10 seconds. If you enter 0, there will be no delay.
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the default value is 10 seconds.
Anti-Dither	Configure the time period from end of event detection to the stop of alarm.
Snapshot	Select the check box to take a snapshot of the selected channel.

Parameter	Description					
Record CH	Select the channel(s) that you want to record. The selected channel(s) starts recording after an alarm occurs.					
	The recording for IoT alarms and auto recording function must be enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.9.1 Enabling Record Control."					
Tour	Select the check box to enable a tour of the selected channels.					
Voice Prompts	Select to enable audio broadcast/voice prompts in response to a temperature alarm event.					
More Setting	<ul> <li>Show Message: Select the Show Message check box to enable a pop-up message in your local host PC.</li> <li>Buzzer: Select the check box to activate a buzzer noise at the Device.</li> <li>Video Matrix: Select the check box to enable the function. When an alarm event occurs, the video output port outputs the settings configured in "Main Menu &gt; DISPLAY &gt; TOUR."</li> <li>Not all models support this function.</li> <li>Send Email: Enable the system to send an email notification when an alarm event occurs.</li> <li>To use this function, make sure the email function is enabled in Main Menu &gt; NETWORK &gt; EMAIL.</li> <li>Log: Select the check box to enable the Device to record a local alarm log.</li> </ul>					

<u>Step 4</u> Click **Save** to save the settings.

# 5.12.2.5 Searching IoT Information

You can search and backup all your IoT data.

To back up the data, you should prepare a USB device and plug it into the Device. <u>Step 1</u> On the main interface, select **IoT > SEARCH INFO**. See Figure 5-188.

I	🕥 IoT					LIVE	1 🕹 😔 -	90 80
	REALTIME DISPLAY	Access Point	1		Display Type	List

	Alarm Release	e OK				
					Apply	Back

<u>Step 2</u> Configure the settings for the wireless alarm output. For details, see Table 5-56. Table 5-56

Parameter	Description			
	• Auto: Automatically activate alarm if the alarm output function			
	for wireless siren is enabled for specific events. For example, if			
USB Gateway,	you want to enable the alarm output through wireless siren for			
Camera Gateway	motion detection, see "Alarm Output" parameter in Table 5-39.			
	Manual: Activate alarm immediately.			
	• Stop: Do not activate alarm.			
Alarm Release	Click <b>OK</b> to clear all alarm output status of wireless siren.			

<u>Step 3</u> Click **Apply** to save the settings.

# **5.13 Configuring POS Settings**

You can connect the Device to the POS (Point of Sale) machine and receive the information from it. This function applies to the scenarios such as supermarket POS machine. After connection is established, the Device can access the POS information and display the overlaid text in the channel window.

 $\square$ 

Playing POS information in the local playback and viewing the POS information in the live view screen only support single-channel mode and four-channel mode. Displaying monitoring screen and playing back in the web support multi-channel mode.

# 5.13.1 Searching the Transaction Records

 $\square$ 

The system supports fuzzy search.

#### Step 1 Select Main Menu > POS > POS SEARCH.

The **POS SEARCH** interface is displayed. See Figure 5-192.

	POS					
>	POS SEARCH	POS SEARCH			Search	
	POS SETUP	Channel	1		Scaren	
		Start Time	2018 - 07 - 17	00:00:00		
		End Time	2018 - 07 - 18	00:00:00		
		0 T	ransaction Time		Channel	Play
		< 0/0				

Figure 5-192

- <u>Step 2</u> In the **POS SEARCH** box, enter the information such as transaction number on your receipt, amount, or product name.
- <u>Step 3</u> In the **Start Time** box and **End Time** box, enter the time period that you want to search the POS transaction information.
- Step 4 Click Search.

The searched transaction results display in the table.

# 5.13.2 Configuring POS Settings

### <u>Step 1</u> Select Main Menu > POS > POS SETUP.

The **POS SETUP** interface is displayed. See Figure 5-193.

POS				
POS SEARCH	POS Name	posl 🔹	Enable	
POS SETUP	POS Name	posi	Ellable	
			Record CH	<b>#</b>

			Time Display	120 Sec.
			Font Size	Medium 👻
			Color	
			POS Info	
			Line Delimiter	
	Default			Apply Back

 $\underline{Step \ 2}$  Configure the settings for the POS parameters. See Table 5-57.

Table 5-57

Parameter	Description	
	In the POS Name list, select the POS machine that you want to	
POS Name	configures settings for. Click to modify the POS name.	
	The POS name supports 21 Chinese characters or 63 English	
	characters.	
Enable Enable the POS function.		
	Select the channel(s) that you want to record. The selected	
Record CH	channel(s) starts recording after an alarm occurs.	
	The recording for POS alarms and auto recording function must	
	be enabled. For details, see "5.1.4.9 Configuring Recorded Video	
	Storage Schedule" and "5.9.1 Enabling Record Control."	
Privacy Setup	Enter the privacy content.	
Protocol Type	Select <b>POS</b> by default. Different machine corresponds to different	
Protocol Type	protocol.	

Parameter	Description			
	In the <b>Connect Type</b> list, select the connection protocol type.			
Connect Type	Click , the IP Address interface is displayed.			
	In the Source IP box, enter the IP address (the machine that is			
	connected to the Device) that sends messages.			
Convert	Select a character encoding mode.			
	In the Overlay list, Select TURN or ROLL.			
	• TURN means to turn a page when there are 16 lines of			
	overlay information.			
Overlay	• <b>ROLL</b> means to roll up the interface when there are 16 lines			
Overlay	of overlay information. The first line disappears each time.			
	When local preview mode is 4-split, overlay information is			
	substituted when there are 8 lines.			
	When the network is not working correctly and cannot be			
Network time out	recovered after the entered timeout limit, the POS information will			
Network time out	not display normally. After the network is recovered, the latest			
	POS information will be displayed.			
	Enter the time that how long you want to keep the POS			
Time Display	information displaying. For example, enter 5, the POS information			
	disappear from the screen after 5 seconds.			
Font Size	In the Font Size list, select Small, Medium, or Big as the text			
	size of POS information			
COLOR	In the color bar, click to select the color for the text size of POS			
	information.			
POS Info	Enable the POS Info function, the POS information displays in the			
	live view screen.			
	It does not need to configure. The system goes to a new line 1s			
	after no data is received.			
	If you enter a line delimiter, the system goes to a new line when			
	overlay information identifies the line delimiter (hexadecimal).			
Line Delimiter	For example, if line delimiter is F and overlay information is			
	123156789, the local preview and web overlay information is			
	displayed as:			
	123			
	6789			

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.14 Configuring Backup Settings

## 5.14.1 Finding USB Device

When you inset a USB storage device into the USB port of the Device, the Device detects the USB storage device and pops up "Find USB device" interface, which provides you a shortcut to perform backup and upgrading operations. See Figure 5-194.

For details, see "5.14.2 Backing up Files", "5.20.2 Viewing Log Information", "5.19.5 Exporting and Importing System Settings", and "5.19.7 Upgrading the Device."

Figure 5-194

	File Format	DAV		Search Clear	
	0 Cha	nnel Type Start Time	End Time	Size(KB)	
	0.00 KB(Space	Needed)		Backup	

<u>Step 2</u> Configure the settings for the backup parameters. See Table 5-58.

Parameter	Description			
	In the <b>Device Name</b> list, select the device that you want to back up			
Device Name	the files to.			
	Click Format, the Format interface is displayed.			
	• If the capacity of external storage device is less than 2TB, you			
Format	can select FAT32 or NTFS to format it.			
	• If the capacity of external storage device is equal to or more			
	than 2TB, you can only select NTFS to format it.			
Dath	Click Browse, the Browse interface is displayed. Select the route			
Path	where you want to search for the files.			
Record CH	In the Record CH list, select the channel where you want to search			
	for the files.			
Туре	In the <b>Type</b> list, select the file type that you want to search.			
Start Time	Enter the start time and end time for the files that you want to			
End Time	search.			
File Formet	In the File Format list, select the file format as DAV or MP4 that			
File Format	you want to search.			

Table 5-58

- <u>Step 3</u> Click **Search** to search the files that meet the configured settings. The searched results will display in the table.
- <u>Step 4</u> Select the files that you want to back up.
- Step 5 Click **Backup** to back up the selected files to the configured path.

Click Clear to remove all the searched results.

# 5.15 Network Management

## 5.15.1 Configuring Network Settings

You can ensure the network interworking between the Device and other devices through configuring the network settings.

## 5.15.1.1 Configuring TCP/IP Settings

You can configure the settings for the Device such as IP address, DNS according to the networking plan.

Select **Main Menu > NETWORK > TCP/IP**, the **TCP/IP** interface is displayed. See Figure 5-196. For details about parameter settings, see "5.1.4.4 Configuring Network Settings."

Figure 5-196

	🚱 NETWORK			LIVE	<b>L</b> 🗗	
	TCP/IP	Net Mode	Multi-address			
	CONNECTION Wi-Fi	Default Ethernet Port	Ethernet Port1			
		Ethernet Card	Ethernet Port1			
	PPPoE	IP Version	IPv4			
	DDNS	MAC Address				
	EMAIL	DHCP				
	UPnP	IP Address	172 . 12 . 20 . 15			
	SNMP	Subnet Mask	255 . 255 . 0 . 0			
	MULTICAST	Default Gateway	172 . 12 . 0 . 1

	P2P	Alternate DNS	8.8.4.4			
	802.1x	мти	1500			
				Apply	Bac	k

## 5.15.1.2 Configuring Port Settings

You can configure the maximum connection accessing the Device from Client such as WEB, Platform, and Mobile Phone and configure each port settings.

Step 1 Select Main Menu > NETWORK > CONNECTION.

The **CONNECTION** interface is displayed. See Figure 5-197.

Figure 5-197

🛞 NETWORK				
TCP/IP	Max Connection	128	(0-128)	
> CONNECTION	TCP Port	37777	(1025 - 65535)	
Wi-Fi	UDP Port	37778	(1025 - 65535)	
3G/4G	HTTP Port	80	(1-65535)	
PPPoE	RTSP Port	554	(1-65535)	
DDNS	POS Port	38800	(1025 - 65535)	
EMAIL	HTTPS Enable			
UPnP	HTTPS Port	443	(1-65535)

MULTICAST				
REGISTER				
ALARM CENTER				
P2P				
802.1x				
002.17				
			Ē	Apply Back

Step 2 Configure the settings for the connection parameters. See Table 5-59.

The parameter setting can take effect without need to reboot the device.

Table 5-59

Parameter	Description				
	The allowable maximum clients accessing the Device at the same				
Max Connection	time, such as WEB, Platform, and Mobile Phone.				
	Select a value between 1 and 128. The default value setting is 128.				
TCP Port	The default value setting is 37777. You can enter the value				
	according to your actual situation.				
UDP Port	The default value setting is 37778. You can enter the value				
ODF FOIL	according to your actual situation.				
	The default value setting is 80. You can enter the value according				
HTTP Port	to your actual situation.				
	If you enter other value, for example, 70, and then you should enter				
	70 after the IP address when logging in the Device by browser.				
RTSP Port	The default value setting is 554. You can enter the value according				
KISP FUIL	to your actual situation.				
POS Port	Data transmission. The value range is from 1 through 65535. The				
FUSFUIL	default value is 38800.				
HTTPS Enable	Enable HTTPS.				
HTTPS Port	HTTPS communication port. The default value setting is 443. You				
	can enter the value according to your actual situation.				

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.15.1.3 Configuring Wi-Fi Connection Settings

You can make wireless connection between the Device and the other devices in the same network through Wi-Fi settings, facilitating the devices connection and mobility.  $\square$ 

Only the Device with Wi-Fi module supports this function.

#### <u>Step 1</u> Select Main Menu > NETWORK > Wi-Fi.

The Wi-Fi interface is displayed. See Figure 5-198.

🍪 NETWORK					LIVE	<b>.</b>	
TCP/IP	Wi-Fi Auto Co	onnect					
CONNECTION							
Wi-Fi	0	SSID	Signal Intensity	Wi-Fi Working Info			
		00.0	olghatintenoity	Current Hotspot

REGISTER							
ALARM CENTER							
P2P							
802.1x							
	Refresh				Apply	P	ack
	Kenesn	Connect	Disconnect		Apply		ack

Figure 5-198

<u>Step 2</u> Configure the settings for the Wi-Fi connection parameters. See Table 5-60. Table 5-60

Parameter	Description
	Enable Wi-Fi Auto Connect.
Wi-Fi Auto Connect	After the Device is restarted, it will automatically connect to the
	nearest hotspot that had been connected successfully.
Refresh	Refresh the hotspot list. The self-adaption function such as adding
Reliesh	password is supported if such setting was once configured.
	In the hotpots list, select a hotspot, and then click <b>Connect</b> .
	• To reconnect the same hotspot, disconnect first and then
Connect	reconnect.
	• To connect to other hotspot, disconnect from the current
	connected hotspot first, and then connect to the other hotspot.
Disconnect	To disconnect from a hotspot, click <b>Disconnect</b> .

<u>Step 3</u> Click **Apply** to complete the settings.

After the Device is connected to a Wi-Fi hotspot, in the **Wi-Fi Working Info** area, the current hotspot, IP address, subnet mask, and default gateway are displayed.

## 5.15.1.4 Configuring 3G/4G Settings

You can connect a wireless 3G/4G module to the USB port of the Device and then access the Device with the IP address provided by the module.

 $\square$ 

Not all models support this function.

<u>Step 1</u> Connect the wireless 3G/4G module to the USB port of the Device.

Step 2 Select Main Menu > NETWORK > 3G/4G.

The **3G/4G** interface is displayed, see Figure 5-199.

🚱 NETWORK				LIVE	
TCP/IP	TD-LTE util				
CONNECTION					
Wi-Fi	Ethernet Card	Ite0	🔻 🗹 Enable		
3G/4G	Network Type	TD-LTE

Figure 5-199

The 3G/4G interface is consisted of three areas:

- Area 1: Displays the signal strength.
- Area 2: Displays the module configurations.
- Area 3: Displays the connection state.

 $\square$ 

The information of Area 2 will display after the 3G/4G module is connected; while the information of Area 1 and Area 3 will display only after the 3G/4G function is enabled.

<u>Step 3</u> The Device starts identifying the wireless module and displays the recognized information for the parameters in Area 2. See Table 5-61.

Table 5-61

Parameter	Description
Ethernet Card	Displays the name of Ethernet card.

Parameter	Description
Network Type	Displays the network type. Different type represents different supplier.
APN	Displays the default APN number.
Dial No.	Displays the default dial No.
AUTH	Authentication mode. You can select <b>PAP</b> , <b>CHAP</b> , or <b>NO_AUTH</b> .

<u>Step 4</u> Select the **Enable** check box.

<u>Step 5</u> Click **Dial** to start connecting.

After the connection is established, the result is displayed in the **Wireless Network** area. See Figure 5-200.

	🚱 NETWORK				LIVE	🛓 🕒 🗸 👼

	802.1x					
					Apply	Back

Figure 5-200

<u>Step 6</u> Click **Apply** to complete the settings.

#### Supported 3G/4G Modules by the Device

- China Mobile 3G/4G: ZTE MF832S
- China Mobile 4G: ZTE MF832S
- China Unicom 3G: ZTE MF667S, HUAWEI E353U-1
- China Telecom 4G: HUAWEI EC122, ZTE AC2736

Ш

- If the Device is connected to China Telecom 3G/4G network, you can login the Device with the public IP address through the PC of public internet (The HTTP port is not configured as 80). If the Device is connected to China Unicom or China Mobile 3G network, which are defined as private network, therefore you cannot login the Device through PC that is connected to public internet.
- The Ethernet card names that are displayed on the 3G/4G interface are not constant, and they could be ppp5, ppp6, ppp7 or ppp8 and are different depending on the USB2.0 port on the Device that is connected to the 3G module.

- If you dial to connect to 3G/4G network, you have to keep trying till succeeded. The default gateway could be switched depending on the priority of Ethernet cards.
- The China Unicom and China Mobile 3G/4G modules in USB flash disk style do not support EDGE mode for the moment.

## 5.15.1.5 Configuring PPPoE Settings

PPPoE is another way for the Device to access the network. You can establish network connection by configuring PPPoE settings to give the Device a dynamic IP address in the WAN. To use this function, firstly you need to obtain the user name and password from the Internet Service Provider.

#### <u>Step 1</u> Select Main Menu > NETWORK > PPPoE.

The **PPPoE** interface is displayed. See Figure 5-201.

🚱 NETWORK		LIV	(E) 🚨 🕞 🗕 🗒
Image: NetworkTCP/IPCONNECTIONWi-Fi3G/4GDDNSDDNSEMAILUPnPSNMPMULTICASTREGISTERALARM CENTERP2P802.1x	Enable User Name Password IP Address		E 🖌 🕑 - 開
		Apply	Back

Figure 5-201

- <u>Step 2</u> Enable the PPPoE function.
- <u>Step 3</u> In the **User Name** box and **Password** box, enter the user name and password accordingly provided by the Internet Service Provider.
- <u>Step 4</u> Click **Apply** to complete the settings.

The system pops up a message to indicate the successfully saved. The IP address appears on the PPPoE interface. You can use this IP address to access the Device.

When the PPPoE function is enabled, the IP address on the **TCP/IP** interface cannot be modified.

## 5.15.1.6 Configuring DDNS Settings

When the IP address of the Device changes frequently, the DDNS function can dynamically refresh the correspondence between the domain on DNS and the IP address, ensuring you access the Device by using the domain.

### Preparing for Configuration

Please confirm if the Device supports the DDNS Type and log in the website provided by the DDNS service provider to register the information such as domain from PC located in the WAN.

After you have registered and logged in the DDNS website successfully, you can view the information of all the connected devices under this user name.

### **Configuring Steps**

#### <u>Step 1</u> Select Main Menu > NETWORK > DDNS. The DDNS interface is displayed. See Figure 5-202. Figure 5-202

🚱 NETWORK				010 0
TCP/IP CONNECTION	Enable

802.1x				
			Apply Back	

<u>Step 2</u> Configure the settings for the DDNS parameters. See Table 5-62.

Table 5-62

Parameter	Description
Enable	Enable the DDNS function.
	After enabling DDNS function, the third-party might collect your
	Device information.
DDNS Type	Type and address of DDNS service provider.
	Type: Dyndns DDNS; address: members.dyndns.org
Host IP	Type: NO-IP DDNS; address: dynupdate.no-ip.com
	Type: CN99 DDNS; address: members.3322.org
Domain Name	The domain name for registering on the website of DDNS service
Domain Name	provider.
User Name	Enter the user name and password obtained from DDNS service
Decouverd	provider. You need to register (including user name and password)
Password	on the website of DDNS service provider.
Interval	Enter the amount of time that you want to update the DDNS.

<u>Step 3</u> Click **Apply** to complete the settings.

Enter the domain name in the browser on your PC, and then press **Enter**. If the web interface of the Device is displayed, the configuration is successful. If not, the configuration is failed.

## 5.15.1.7 Configuring EMAIL Settings

You can configure the email settings to enable the system to send the email as a notification when there is an alarm event occurs.

#### Step 1 Select Main Menu > NETWORK > EMAIL.

The **EMAIL** interface is displayed. See Figure 5-203.

#### Figure 5-203

🍪 NETWORK				LIVE	
TCP/IP	Enable				
CONNECTION	SMTP Server	MailServer

				Apply	Back

Table 5-63

Parameter	Description						
Enable	Enable the email function.						
SMTP Server	Enter the address of SMTP server of sender's email account.						
Port	Enter the port value of SMTP server. The default value setting is						
POIL	25. You can enter the value according to your actual situation.						
User Name	Enter the user name and necessary of conder's small account						
Password	Enter the user name and password of sender's email account.						
Anonymity	If enable the anonymity function, you can login as anonymity.						
	In the Mail Receiver list, select the number of receiver that you						
Mail Receiver	want to receive the notification. The Device supports up to three						
	mail receivers.						
Email Address	Enter the email address of mail receiver(s).						
Enter the sender's email address. It supports maximur							
Sender	senders separated by comma.						
	Enter the email subject.						
Title	Supports Chinese, English and Arabic numerals. It supports						
	maximum 64 characters.						
Attachmont	Enable the attachment function. When there is an alarm event, the						
Attachment	system can attach snapshots as an attachment to the email.						

Parameter	Description			
Authentication	Select the encryption type: <b>NONE</b> , <b>SSL</b> , or <b>TLS</b> .			
	For SMTP server, the default encryption type is <b>TLS</b> .			
	This is the interval that the system sends an email for the same			
	type of alarm event, which means, the system does not send an			
Interval (Sec.)	email upon any alarm event.			
	This setting helps to avoid the large amount of emails caused by			
	frequent alarm events.			
	The value ranges from 0 to 3600. 0 means that there is no interval.			
Health Enable	Enable the health test function. The system can send a test email			
	to check the connection.			
	This is the interval that the system sends a health test email.			
Interval (Min.)	The value ranges from 30 to 1440. 0 means that there is no			
	interval.			
	Click Test to test the email sending function. If the configuration is			
Test	correct, the receiver's email account will receive the email.			
	Before testing, click <b>Apply</b> to save the settings.			

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.15.1.8 Configuring UPnP Settings

You can map the relationship between the LAN and the WAN to access the Device on the LAN through the IP address on the WAN.

## Preparation for Configuration

- Login the router to set the WAN port to enable the IP address to connect into the WAN.
- Enable the UPnP function at the router.
- Connect the Device with the LAN port on the router to connect into the LAN.
- Select Main Menu > NETWORK > TCP/IP, configure the IP address into the router IP address range, or enable the DHCP function to obtain an IP address automatically.

## **Configuration Steps**

#### <u>Step 1</u> Select Main Menu > NETWORK > UPnP. The UPnP interface is displayed. See Figure 5-204.

Figure 5-204

🚱 NETWORK								LIVE	L 🗗	<b>₽</b> 0

	After mapping succeeded, the system obtains IP address						
	automatically without performing any configurations.						
WANIP	Enter IP address of router on the WAN.						
	After mapping succeeded, the system obtains IP address						
automatically without performing any configurations.							

	Description					
PAT Table	<ul> <li>The settings in PAT table correspond to the UPnP PAT table on the router.</li> <li>Service Name: Name of network server.</li> <li>Protocol: Type of protocol.</li> <li>Int. Port: Internal port that is mapped on the Device.</li> <li>Ext. Port: External port that is mapped on the router.</li> <li>Image: The ports from 1024 through 5000 and avoid popular ports from 1 through 255 and system ports from 256 through 1023.</li> <li>When there are several devices in the LAN, please reasonably arrange the ports mapping to avoid mapping to the same external port.</li> <li>When establishing a mapping relationship, please ensure the mapping ports are not occupied or limited.</li> <li>The internal and external ports of TCP and UDP must be the same and cannot be modified.</li> </ul>					

<u>Step 3</u> Click **Apply** to complete the settings.

In the browser, enter http://WAN IP: External IP port. You can visit the LAN Device.

## 5.15.1.9 Configuring SNMP Settings

 $\square$ 

Not all models support this function.

You can connect the Device with some software such as MIB Builder and MG-SOFT MIB Browser to manage and control the Device from the software.

## Preparation for Configuration

- Install the software that can manage and control the SNMP, such as MIB Builder and MG-SOFT MIB Browser
- Obtain the MIB files that correspond to the current version from the technical support.

## **Configuration Steps**

#### <u>Step 1</u> Select Main Menu > NETWORK > SNMP.

The **SNMP** interface is displayed. See Figure 5-205.

#### Figure 5-205

🚱 NETWORK					LIVE	<b>.</b>

## <u>Step 2</u> Configure the settings for the SNMP parameters. See Table 5-65.

Parameter	Description				
Enable	Enable the SNMP function.				
Version	Select the check box of SNMP version(s) that you are using.				
	The default version is V3. There is a risk of select V1 or V2.				
SNMP Port	Indicates the monitoring port on the agent program.				
Read Community	Indicates the read/write strings supported by the agent program				
Write Community	Indicates the read/write strings supported by the agent program.				
	Indicates the destination address for the agent program to send the				
Trap Address	Trap information.				
Trap Port	Indicates the destination port for the agent program to send the				
Пар Роп	Trap information.				
Read Only User	Enter the user name that is allowed to access the Device and has				
	the "Read Only" permission.				
Read/Write User	Enter the user name that is allowed to access the Device and has				
	the "Read and Write" permission.				
Authentication Type	Includes MD5 and SHA. The system recognizes automatically.				
Authentication					
Password	Enter the password for authentication type and encryption type.				
Encryption	The password should be no less than eight characters.				
Password					

Parameter	Description
	In the Encryption Type list, select an encryption type. The default
Encryption Type	setting is CBC-DES.

Table 5-65

- Step 3 Compile the two MIB files by MIB Builder.
- Step 4 Run MG-SOFT MIB Browser to load in the module from compilation.
- <u>Step 5</u> On the MG-SOFT MIB Browser, enter the Device IP that you want to manage, and then select the version number to query.
- <u>Step 6</u> On the MG-SOFT MIB Browser, unfold the tree-structured directory to obtain the configurations of the Device, such as the channels quantity and software version.

### 5.15.1.10 Configuring Multicast Settings

When you access the Device from the network to view the video, if the access is exceeded, the video will not display. You can use the multicast function to group the IP to solve the problem. <u>Step 1</u> Select **Main Menu > NETWORK > MULTICAST**.

The MULTICAST interface is displayed. See Figure 5-206.

Figure 5-206

<u>Step 2</u> Configure the settings for the multicast parameters. See Table 5-66.

Table 5-66

Parameter	Description			
Enable	Enable the multicast function.			
IP Address	Enter the IP address that you want to use as the multicast IP.			
IP Address	The IP address ranges from 224.0.0.0 through 239.255.255.255.

 $\underline{Step 2} \quad Configure the settings for the alarm center parameters. See Table 5-68.$ 

Table 5-68

Parameter	Description					
Enable	Enable the alarm center function.					
Protocol Type	In the Protocol Type list, select protocol type. The default is					
гоюсогтуре	ALARM CENTER.					
Host IP	The IP address and communication port of the PC installed with					
Port	alarm client.					
Self-Report Time	In the Self-Report Time list, select time cycle and specific time for					
Sell-Report Time	uploading alarm.					

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.15.1.13 Configuring P2P Settings

You can manage the devices by using P2P technology to download the application and register the devices. For details, see "5.1.4.5 Configuring P2P Settings."

### 5.15.1.14 802.1x

The Device can be connected with LAN after passing 802.1x certification.

<u>Step 1</u> Select Main Menu > NETWORK > 802.1x.

The 802.1x interface is displayed. See Figure 5-210 and Figure 5-211.

Figure 5-210

<u>Step 4</u> Click **Apply** to complete the settings.

# 5.15.2 Configuring Network Testing Settings

### 5.15.2.1 Testing the Network

You can test the network connection status between the Device and other devices.

```
Step 1 Select Main Menu > INFO > NETWORK > Network Test.
```

The Network Test interface is	displayed. Se	e Figure 5-212.
-------------------------------	---------------	-----------------

	INFO				LIVE 💄 🕞 🗸 😫
	VERSION	Online User N	etwork Load Networl	< Test	
	LOG	Network Test			
	EVENT	Destination IP			
>	NETWORK	Test Result

### 5.15.2.2 Capturing Packet and Backing up

Packet capture means the operations such as capturing, resending, and editing data that are sent and received during network transmission. When there is network abnormality, you can perform packet capturing and back up into the USB storage device. This date can be provided to the technical support for analyzing the network condition.

Step 1 Select Main Menu > INFO > NETWORK > Network Test.

The Network Test interface is displayed. See Figure 5-214.

Figure 5-214

INFO				
VERSION	Online User N	letwork Load Network	Test	
LOG	Network Test

	Address			Browse
	Name	IP	Sniffer Packet Size	Sniffer Packet Backup
	LAN1	192.168.20.13	0KB	

- <u>Step 2</u> Connect a USB storage device to the Device.
- Step 3 Click Refresh.

The Device starts detecting the USB storage device and displays its name in the **Device Name** box.

- <u>Step 4</u> Select the route of the data that you want to capture and back up.
  - 1) In the **Network Sniffer Packet Backup** area, click **Browse**.

The **Browse** interface is displayed. See Figure 5-215.

Figure 5-215

Brow	rse					
	Device Name	sda5(USB DISK)	<ul> <li>Refres</li> </ul>	h

	New Folder				ОК	Back
2)	Select the route	·. ·				
,						

- If there are several USB storage devices are connected to the Device, you can select from the **Device Name** list.
- Click Refresh to total space, free space and the file list in the selected USB storage device.
- In the case of insufficient capacity, click to delete the needless files.
- Click **New Folder** to create a new folder in the USB storage device.
- Click Apply to save the route selection settings. The Test interface is displayed again.
- Step 5 Click
  - to start packet capturing and backing up.

 $\square$ 

- Only the data packet of one LAN can be captured at one time.
- After capturing starts, you can exit the **Test** interface to perform other operations such as web login and monitoring.

Step 6 Click with to stop capturing.

The backup data is saved in the selected route under the naming style "LAN name-time.pcap." See Figure 5-216. You can open it by using Wireshark software.

Figure 5-216

# **5.16 Configuring Account Settings**

You can add, modify and delete user accounts, groups, and ONVIF users, and set security questions for admin account.

- The user name supports 31 characters and group name supports 15 characters. The user name can be consisted of letter, number, "\_", "@", ".".
- You can set maximum 64 users and 20 groups. The group name by "User" and "Admin" cannot be deleted. You can set other groups and define the relevant permissions. However, the admin account cannot be set randomly.
- You can manage the account by user and group and the name cannot be repeated. Every user must belong to a group, and one user only belongs to one group.

# 5.16.1 Configuring User Account

### 5.16.1.1 Adding a User Account

### Step 1 Select Main Menu > ACCOUNT > USER.

The **USER** interface is displayed. See Figure 5-217.

_									
	🚣 ACCOUNT							LIVE	
	USER								
	GROUP		User Name				Memo		
			admin	admin		Login Local	admin 's ac	count	
	ONVIF USER								
		Add L	lser						

Figure 5-217

<u>Step 2</u> Click **Add User**. The **Add User** interface is displayed. See Figure 5-218. Figure 5-218

Add User					
User Name					
Password			Confirm Password		
Memo			User MAC		
Group	admin				
Period	Setting

				OK	Back

<u>Step 3</u> Configure the settings for the parameters of adding a user account. See Table 5-70.

Table 5-70

Parameter	Description					
User Name	Fister a visce party and measured for the account					
Password	Enter a user name and password for the account.					
Confirm Password	Re-enter the password.					
Memo	Optional.					
Memo	Enter a description of the account.					
User MAC	Enter user MAC address					
	Select a group for the account.					
Group	NOTE					
	The user rights must be within the group permission.					
	Click Set to display Set interface.					
Period	Define a period during which the new account can login the device.					
Fellou	The new account cannot login the device during the time beyond					
	the set period.					
	In the Authority area, select the check boxes in the System tab,					
	Playback tab, and Monitor tab.					
Authority	NOTE NOTE					
Autionty	To manage the user account easily, when defining the user					
	account authority, it is recommended not to give the authority to the					
	common user account higher that the advanced user account.					

<u>Step 4</u> Click **OK** to complete the settings.

### Setting Permitted Period

Step 1 Next to Period, click Setting.

The Set interface is displayed. See Figure 5-219.

Figure 5-219

• Define the period by drawing.

- Define for a specified day of a week: On the timeline, click the half-hour blocks to select the active period.
- $\diamond$  Define for several days of a week: Click  $\square$  before each day, the icon

switches to . On the timeline of any selected day, click the half-hour blocks

to select the active periods, all the days with 🔤 will take the same settings.

the days will take the same settings.

- Define the period by editing. Take Sunday as an example.
- 1) Click 🍄.

The **Period** interface is displayed. See Figure 5-220.

Period	
Current Date:	Sunday
Period 1	00:00 - 24:00
Period 2	00:00 - 24:00
Period 3	00:00 - 24:00
Period 4	00:00 - 24:00
Period 5	00:00 - 24:00
Period 6	00:00 - 24:00
Сору	
🖂 Sunday	🗌 Monday 🔄 Tuesday 📄 Wednesday 📄 Thursday 📄 Friday 📄 Saturday
	OK Back

Figure 5-220

- 2) Enter the time frame for the period and select the check box to enable the settings.
  - $\diamond~$  There are six periods for you to set for each day.
  - Under Copy, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 3) Click **OK** to save the settings.
- Step 3 Click OK.

### 5.16.1.2 Modify a User Account

#### <u>Step 1</u> Select Main Menu > ACCOUNT > USER.

The **USER** interface is displayed. See Figure 5-221.

Figure 5-221

				ОК	Back

<u>Step 3</u> Change the settings for password, user name, user group, user MAC, memo, period, and authority.

 $\square$ 

The new password can be set from 8 digits through 32 digits and contains at least two types from number, letter and special characters (excluding"'", """, ";", ":" and "&").

For the admin account, you can enter or modify email address, enable/disable the unlock pattern, modify the security questions.

- In the **Email Address** box, enter the email address, and the click **Save** to save the setting.
- To use the unlock pattern, enable **Unlock Pattern**, click **I**, draw a pattern in the **Unlock Pattern** interface, and then click **Save** to save the setting.
- Configuring security questions.
- 1) Click Security Questions.

The **Security Questions** interface is displayed. See Figure 5-223. Figure 5-223

Security Questions	
Successfully set. Please delete it first if you want to reset se	ecurity question!again.
Question 1       What is your favorite children's book?         Answer	
Question 2       What was the first name of your first boss?         Answer	
Question 3       What is the name of your favorite fruit?         Answer	
	Setting Delete

2) In the **Question** list, select questions and enter the answers in the Answer box.

 Click Setting to save the settings. You can use the security questions and answers to reset the password for admin account.

 $\square$ 

To reset the security questions, on the **Security Questions**, enter the correct answers for each question, and then click **Delete**.

<u>Step 4</u> Click **OK** to complete the settings.

### 5.16.1.3 Deleting a User Account

### <u>Step 1</u> Select Main Menu > ACCOUNT > USER.

The USER interface is displayed. See Figure 5-224.

Figure 5-224

	00 : 00 - 24 : 00	None	60 Min.	0 Mic 🔻
	00:00 - 24:00	None	60 Min.	0 Mic 🔻
				Apply Back

Figure 5-235

Table 5-72

Parameter	Description				
	In the <b>Period</b> box, enter the time. Select the check box to enable				
Period	the settings.				
	You can configure up to six periods.				
File Name	In the File Name list, select the audio file that you want to play for				
File Name	this configured period.				
Interval	In the Interval box, enter the time in minutes for how often you				
Interval	want to repeat the playing.				
Papaat	Configure how many times you want to repeat the playing in the				
Repeat	defined period.				
	Includes two options: MIC and Audio. It is MIC by default. The MIC				
Output	function shares the same port with talkback function and the latter				
	has the priority.				

 $\square$ 

- The finish time for audio playing is decided by audio file size and the configured interval.
- Playing priority: Alarm event > Talkback > Trial listening > Audio file.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.18 Storage Management

Storage management function manages the stored resources such as recorded video files and storage space. The function aims at providing easier operation and improving the storage efficiency.

# 5.18.1 Configuring Basic Settings

### <u>Step 1</u> Select Main Menu > STORAGE > BASIC.

The **BASIC** interface is displayed. See Figure 5-236.

Figure 5-236

	📥 STORAGE					LIVE	<b>.</b>	🕂 - 😳	
>	BASIC								
	SCHEDULE	HDD Full							
	HDD MANAGER	Pack Mode		60	Min.				
	HDD DETECT	Auto-Delete Old Files	Never						
	REC ESTIMATE								
	FTP								
							_		
						Apply		Back	

<u>Step 2</u> Configure the settings for the basic settings parameters. See Table 5-73. Table 5-73

Parameter	Description								
	Configure the settings for the situation all the read/write discs are								
	full, and there is no more free disc.								
HDD Full	Select Stop Record to stop recording								
	• Select <b>Overwrite</b> to overwrite the recorded video files								
	always from the earliest time.								
Pack Mode	Configure the time length and file length for each recorded video.								
Auto Doloto Old Filos	Configure whether to delete the old files and if yes, configure the								
Auto-Delete Old Files	days.								

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.18.2 Configuring the Recording and Snapshot Schedule

The system starts recording and taking snapshot according to the configured schedule. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.1.4.10 Configuring Snapshot Storage Schedule."

## 5.18.3 Configuring HDD Manager

You can view the HDD information, format HDD, and configure the HDD type through HDD manager.

#### Step 1 Select Main Menu > STORAGE > HDD MANAGER.

The HDD MANAGER interface is displayed. See Figure 5-237.

In the table, you can view the information of current HDD, such as device name, HDD type, status, total space and free space, and serial number of the HDD port.

STORAGE						LIVE	L
BASIC							
SCHEDULE	1* All	Devid	e Name	Physical Position	Туре	Health status	Free Sp 0.00

RECORD							
ADVANCE							
QUOTA							
HDD DETECT							
REC ESTIMATE							
FTP							
	Refr	esh	Format			Apply	Back

Figure 5-237

<u>Step 2</u> Configuring the settings for the HDD manager.

- HDD type setting: In the **Type** list, select **Read/Write**, **Read-Only** or **Redundant**, and then click **Apply** to save the settings.
- HDD format: Select the HDD that you want to format, click **Format**, in the pop-up message, click **OK** to start formatting, and then following the onscreen message to complete formatting.

# 5.18.4 Configuring Record

Record type includes auto and manual record. You can configure record type of main stream and sub stream. See "5.7 Configuring Record Settings".

## 5.18.5 Configuring Advance Settings

Create HDD group, and save main stream, sub stream and snapshot of designated channels to the HDD group.

- If the interface displays that "Current HDD Mode is Quota Group", click "Change to HDD Group Mode", and then configure HDD group.
- You can enable either HDD Group Mode or Quota Group. The system prompts to reboot the device each time when you switch the mode.

Step 1 Select Main Menu > STORAGE > ADVANCE > HDD.

The HDD interface is displayed. See Figure 5-238.

	STORAGE					LIVE	💄 🗗 🗸 🛱

<u>Step 4</u> Click **Apply** to complete the settings.

## 5.18.6 Configuring Quota

By configuring quota, allocate fixed storage capacity to each channel, and distribute the storage space of each channel reasonably.

- If the interface displays that "Current HDD Mode is HDD Group", click "Change to Quota Mode", and then configure quota.
- You can enable either HDD Group Mode or Quota Group. The system prompts to reboot the device each time when you switch the mode.

Step 1 Select Main Menu > STORAGE > QUOTA.

The QUOTA interface is displayed. See Figure 5-242.

Figure 5-242

STORAGE						
BASIC	Current HI	DD Mode is HDD (	Group. Chang	ge to Quota M	ode

HDD DETECT	SATA5			SATA6		
REC ESTIMATE	SATA7			SATA8		
FTP						
						Apply Cancel

- <u>Step 2</u> Select the channels you want to configure, and select quota from the drop-down list of corresponding HDD.
- <u>Step 3</u> Click **Apply** to complete the settings.

Click Statistics to view the quota of each channel in HDD. See Figure 5-243.

Figure 5-243

1	Channel	Quota
	Other Channels	3.63 TB

# 5.18.7 Configuring HDD Detecting Settings

 $\square$ 

Not all models support this function.

HDD detecting function detects the current status of HDD to let you know the HDD performance and replace the defective HDD.

## 5.18.7.1 Detecting HDD

You can detect HDD by key area detect and global detect.

- Key area detect: Detect the files saved in HDD. The detected bad track can be repaired by formatting. If there are no files in HDD, the system cannot detect the bad track.
- Global detect: Detect the whole HDD through Windows, which takes time and might affect the HDD that is recording the video.

Step 1 Select Main Menu > STORAGE > HDD DETECT > Detect.

The Detect interface is displayed. See Figure 5-244.

#### Figure 5-244

E. STORAGE			
BASIC	Detect Report		
SCHEDULE	Type Key Area Detect	HDD Select HDD(s)	Start Detect Stop Detect

# 5.18.8 Configuring Record Estimate

Record estimate function can calculate how long you can record video according to the HDD capacity, and calculate the required HDD capacity according to the record period.

Step 1 Select Main Menu > STORAGE > REC ESTIMATE.

The **REC ESTIMATE** interface is displayed. See Figure 5-249.

#### Figure 5-249

E STORAGE						LIVE	₽.

				e is for reference	only. Please be cautio	us when you are	
	calculatin	g record p	eriod.				

Step 2 Click

The Edit dialog box is displayed. See Figure 5-250.

You can configure the resolution, frame rate, bit rate and record time for the selected channel.

Edit				
Channel	1			
Resolution	2560*1440(2	560x1440)		
Frame Rate	15			
Bit Rate	4096	(32 - 6144)	≺b/S	
Record Time	24			
Сору		0	K	Back

Figure 5-250

<u>Step 3</u> Click **OK** to save the settings.

Then the system will calculate the time period that can be used for storage according to the channels settings and HDD capacity.

 $\square$ 

Click **Copy** to copy the settings to other channels.

Calculating Recording Time

#### <u>Step 1</u> On the **REC ESTIMATE** interface, click the **Known Space** tab.

The Known Space interface is displayed. See Figure 5-251.

Figure 5-251

#### Step 2 Click Select.

The Select HDD(s) interface is displayed.

<u>Step 3</u> Select the check box of the HDD that you want to calculate.

In the **Known Space** tab, in the **Time** box, the recording time is displayed. See Figure 5-252.

Figure 5-252
--------------

### Calculating HDD Capacity for Storage

Step 1 On the REC ESTIMATE interface, click the Known Time tab.

The Known Time interface is displayed. See Figure 5-253.

Figure 5-253

<u>Step 2</u> In the **Time** box, enter the time period that you want to record.

In the Capacity box, the required HDD capacity is displayed. See Figure 5-254.

Known Space	Known Time			
Time	22	Days		
Capacity		TB =		GB
Note: The record estimation data here is for reference only. Please be cautious when you are calculating record period.				

## 5.18.9 Configuring FTP Storage Settings

You can store and view the recorded videos and snapshots on the FTP server.

### Preparation for Configuration

Purchase or download a FTP server and install it on your PC.

 $\square$ 

For the created FTP user, you need to set the write permission; otherwise the upload of recorded videos and snapshots will be failed.

### **Configuration Steps**

#### <u>Step 1</u> Select Main Menu > STORAGE > FTP.

The FTP interface is displayed. See Figure 5-255.

Figure 5-255

	STORAGE				
	BASIC	Enable	FTP 💿 SFTP	(Pecommender	4)
	SCHEDULE			(Recommended	, , , , , , , , , , , , , , , , , , ,
	HDD MANAGER	Server			
	RECORD	Port	22		
	ADVANCE	Anonymity			
	QUOTA	User Name			
	HDD DETECT	Password			
	REC ESTIMATE	Remote Directory

		Week Day	Fri 🔻	Alarm Inte	l MD General
		Period 1	00:00 - 24:00		
		Period 2	00:00 - 24:00		
		Default Test			Apply Back

<u>Step 2</u> Configure the settings for the FTP settings parameters. See Table 5-74.

Table 5-74

Parameter	Description	
Enable	Enable the FTP upload function.	
FTP type	<ul> <li>Select FTP type.</li> <li>FTP: Plaintext transmission.</li> <li>SFTP: Encrypted transmission (recommended)</li> </ul>	
Server	IP address of FTP server.	
Port	<ul><li>FTP: The default is 21.</li><li>SFTP: The default is 22.</li></ul>	
Anonymity	Enter the user name and password to login the FTP server.	
User Name	Enable the anonymity function, and then you can login	
Password	anonymously without entering the user name and password.	
Remote Directory	<ul> <li>Create folder on FTP server.</li> <li>If you do not enter the name of remote directory, system automatically creates the folders according to the IP and time.</li> <li>If you enter the name of remote directory, the system creates the folder with the entered name under the FTP root directory first, and then automatically creates the folders according to the IP and time.</li> </ul>	
File Length(M)	<ul> <li>Enter the length of the uploaded recorded video.</li> <li>If the entered length is less than the recorded video length, only a section of the recorded video can be uploaded.</li> <li>If the entered length is more than the recorded video length, the whole recorded video can be uploaded.</li> <li>If the entered length is 0, the whole recorded video will be uploaded.</li> </ul>	
Image Upload Interval (Sec.)	<ul> <li>If this interval is longer than snapshot interval, the system takes the recent snapshot to upload. For example, the interval is 5 seconds, and snapshot interval is 2 seconds per snapshot, the system uploads the recent snapshot every 5 seconds.</li> <li>If this interval is shorter than snapshot interval, the system uploads the snapshot per the snapshot interval. For example, the interval is 5 seconds, and snapshot interval is 10 seconds per snapshot, the system uploads the snapshot he snapshot per snapshot interval is 10 seconds.</li> <li>To configure the snapshot interval, select Main Menu &gt; CAMERA &gt; ENCODE &gt; Snapshot.</li> </ul>	
Channel	Select the channel that you want to apply the FTP settings.	
Week Day	Select the week day and set the time period that you want to	
Period 1, Period 2	upload the recorded files. You can set two periods for each weel day.	
Record type	Select the record type (Alarm, Intel, MD, and General) that you want to upload. The selected record type will be uploaded during the configured time period.	

Step 3 Click Test.

The system pops up a message to indicate success or failure. If failed, please check the network connection or configurations.

<u>Step 4</u> Click **Apply** to complete the settings.

# **5.19 Configuring System Settings**

# 5.19.1 Configuring General System Settings

You can configure the device basic settings, time settings, and holiday settings.

For details about basic and time settings, see "5.1.4.2 Configuring General Settings" and "5.1.4.3 Configuring Date and Time Settings."

To configure the holiday settings, do the following:

```
Step 1 Select Main Menu > SYSTEM > GENERAL > Holiday.
```

The Holiday interface is displayed. See Figure 5-256.

🔅 SYSTEM					
> GENERAL		Date&Time	Holiday		
RS232 SECURITY SYSTEM MAINTAIN IMP/EXP DEFAULT UPGRADE	0 Sta	tus Name	Date	Period	Operation
					Add a Holiday

Figure 5-256

Step 2 Click Add a Holiday.

The Add a Holiday interface is displayed. See Figure 5-257.

Figure 5-257

Add a Holiday					
Holiday Name

# 5.19.2 Configuring RS232 Settings

You can configure serial port function, Baud rate and so on.

Only some series products support this RS232.

#### Select Main Menu > SYSTEM > RS232.

The  $\ensuremath{\textbf{RS232}}$  interface is displayed. See Figure 5-259.

Figure 5-259

🗱 SYSTEM			
GENERAL			
> RS232	Function		
SECURITY	Baud Rate		
	Data Bits	8	
SYSTEM MAINTAIN	Stop Bits	1	
IMP/EXP	Parity	None	
DEFAULT			
UPGRADE			
			Apply Back

Table 5-75

Parameter	Description			
	Select serial port control protocol.			
Function	<ul> <li>Console: Upgrade the program and debug with the console and mini terminal software.</li> <li>Keyboard: Control this Device with special keyboard.</li> <li>Adapter: Connect with PC directly for transparent transmission of data.</li> <li>Protocol COM: Configure the function to protocol COM, in order to overlay card number.</li> <li>PTZ Matrix: Connect matrix control.</li> <li>It is <b>Console</b> by default.</li> </ul>			
Baud Rate	Select Baud rate, which is 115200 by default.			
Data Bits	It ranges from 5 to 8, which is 8 by default.			
Stop Bits	It includes 1 and 2.			
Parity	It includes none, odd, even, mark and null. It is none by default.			

# 5.19.3 Configuring Security Settings

To ensure the network security and protect data, you can configure the access permission to the Device from host IP (host IP means the PC or server that has an IP).

- White list includes the host IP that are permitted to access the Device.
- Black list includes the host IP that are not permitted to access the Device.
- Updata time white list includes the host IP that are permitted to sync the Device time.

## 5.19.3.1 Configuring Firewall

## Step 1 Select Main Menu > SYSTEM > SECURITY > Firewall.

```
The Firewall interface is displayed. See Figure 5-260.
```

Figure 5-260

🗱 system				LIVE	]   🚨 💽 📲

DEFAULT					
UPGRADE		Host IP/MAC	Port	Edit	Delete
	Add				
				Apply	Back

Step 2 Select Enable to enable function in the Type list.

<u>Step 3</u> Configure the parameters. See Table 5-76.

Table 5-76

Parameter	Description		
Туре	<ul> <li>In the Type list, you can select Network Access, Sync Time-Whitelist, Forbid Ping and Semi Join.</li> <li>Network Access: Configure access right of IP host.</li> <li>Sync Time-Whitelist: Allow designated IP host to synchronize or change Device time. Prevent multiple IP hosts from synchronizing system time with one Device repeatedly.</li> <li>Forbid Ping: The Device does not respond to Ping requests.</li> <li>Semi Join: Protect Device operation from hacker attack.</li> </ul>		
Mode	<ul> <li>Mode can be configured when Type is Network Access.</li> <li>If Trusted Sites is enabled, you can visit device port successfully with IP/MAC hosts in Trusted Sites.</li> <li>If Blocked Sites is enabled, you cannot visit device port with IP/MAC hosts in Blocked Sites.</li> </ul>		
Add	When Type is Network Access, you can configure IP Address, IP Segment and MAC Address.		
IP Address	Enter IP Address, Start Port and End Port that is allowed or		
Start Port	forbidden.		
End Port	When Type is IP Address, they can be configured. Start Port and End Port can be configured only in Network Access Type.		
Start Address	Enter Start Address and End Address of IP Segment. NOTE		
End Address	When Type is IP Segment, they can be configured.		
MAC Address	Enter MAC Address that is allowed or forbidden. NOTE When Type is MAC Address, it can be configured.		

<u>Step 4</u> Click **Apply** to complete the settings.

# 5.19.3.2 Configuring System Service Settings

You can enable or disable the system internal services.

Step 1 Select Main Menu > SYSTEM > SECURITY > System Service.

The System Service interface is displayed. See Figure 5-261.

Figure 5-261

🗱 system		LIVE 🕹 🗣 🛱
GENERAL	Access Right System S	ervice
RS232	Password Reset	
SECURITY	Mobile Phone Push	
SYSTEM MAINTAIN		
IMP/EXP	CGI	
DEFAULT	ONVIF	
UPGRADE	Audio/Video Transmis	
		The corresponding device or software shall support video decryption function.
		Apply Back

<u>Step 2</u> Configure the parameters. For details, see Table 5-77.

Table 5-77

Parameter	Description
Descurred Descat	Enable or disable the password reset function. It is enabled by default.
Password Reset	If the password reset function is disabled, you can find back
	the password by the security questions. Make sure you have configured the security questions.
Mobile Phone Push	If you enable this function, the snapshots that are activated by the alarm event on the Device can be sent to mobile
	phone. This function is enabled by default.
CGI	If this function is enabled, the remote devices can be added through the CGI protocol.
ONVIF	If this function is enabled, the remote devices can be added through the ONVIF protocol.
	This function is enabled by default.

Parameter	Description		
Audio/Video Transmission	Enable or disable the audio and video stream encryption.		
	• If enabled, make sure the devices or software support		
	decryption.		
	• The audio and video data with third-party platform or		
	device cannot be encrypted for transmission. To		
	guarantee audio and video data safety, it is		
	recommended to disable CGI and ONVIF services.		

<u>Step 3</u> Click Apply to complete the settings.

# 5.19.4 Configuring System Maintenance Settings

When the Device has been running for a long time, you can configure the auto reboot when the Device is not working. You can also configure the case fan mode to reduce noise and extend the service life.

Step 1 Select Main Menu > SYSTEM > SYSTEM MAINTAIN.

The SYSTEM MAINTAIN interface is displayed. See Figure 5-262.

Figure 5-262

<u>Step 2</u> Configure the settings for the system maintenance parameters. See Table 5-78. Table 5-78

Parameter	Description
Auto Reboot	In the Auto Reboot list, select the reboot time.

Parameter	Description
Case Fan Mode	In the <b>Case Fan Mode</b> list, you can select <b>Always run</b> or <b>Auto</b> . If you select <b>Auto</b> , the case fan will stop or start according to the external conditions such as the Device temperature.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.19.5 Exporting and Importing System Settings

You can export or import the Device system settings if there are several Devices that require the same setup.

 $\square$ 

- The IMP/EXP interface cannot be opened if the backup operation is ongoing on the other interfaces.
- When you open the IMP/EXP interface, the system refreshes the devices and sets the current directory as the first root directory.
- Click Format to format the USB storage device.

## **Exporting System Settings**

<u>Step 1</u> Select Main Menu > SYSTEM > IMP/EXP. The IMP/EXP interface is displayed. See Figure 5-263.

Figure 5-263

#### Step 4 Click Export.

There is a folder under the name style of "Config\_[YYYYMMDDhhmmss]". Double-click this folder to view the backup files.

## Importing System Settings

- <u>Step 1</u> Insert a USB storage device containing the exported configuration files from another Device) into one of the USB ports on the Device.
- <u>Step 2</u> Select Main Menu > SYSTEM > IMP/EXP. The IMP/EXP interface is displayed.
- <u>Step 3</u> Click **Refresh** to refresh the interface.

The connected USB storage device is displayed.

- <u>Step 4</u> Click on the configuration folder (under the name style of "Config\_[YYYYMMDDhhmmss]") that you want to import.
- Step 5 Click Import.

The Device will reboot after the imported is succeeded.

# 5.19.6 Restoring Default Settings

Only Admin account supports this function.

You can select the settings that you want to restore to the factory default.

### <u>Step 1</u> Select Main Menu > SYSTEM > DEFAULT.

The **DEFAULT** interface is displayed. See Figure 5-265.

🗱 system

Update File				
			Start	Back

<u>Step 4</u> Click the file that you want to upgrade.

The selected file is displayed in the Update File box.

Step 5 Click Start.

## 5.19.7.2 Performing Online Upgrade

When the Device is connected to Internet, you can use online upgrade function to upgrade the system.

Before using this function, you need to check whether there is any new version by auto check or manual check.

- Auto check: The Device checks if there is any new version available at intervals.
- Manual check: Perform real-time check whether there is any new version available.

Ensure the correct power supply and network connection during upgrading; otherwise the upgrading might be failed.

#### <u>Step 1</u> Select Main Menu > SYSTEM > UPGRADE.

The UPGRADE interface is displayed. See Figure 5-268.

Figure 5-268

🗱 system	LIVE 🕹 💽 😫

> UPGRADE	New Version infomation:			
	Upgrade Now			

Step 3 Click Upgrade now.

## 5.19.7.3 Uboot Upgrading

- Under the root directory in the USB storage device, there must be "u-boot.bin.img" file and "update.img" file saved, and the USB storage device must be in FAT32 format.
- Make sure the USB storage device is inserted; otherwise the upgrading cannot be performed.

When starting the Device, the system automatically check whether there is a USB storage device connected and if there is any upgrade file, and if yes and the check result of the upgrade file is correct, the system will upgrade automatically. The Uboot upgrade can avoid the situation that you have to upgrade through +TFTP when the Device is halted.

# **5.20 Viewing Information**

You can view the information such as log information, HDD information, and version details

# 5.20.1 Viewing Version Details

You can view the version details such as device model, system version, and build date.

Select **Main Menu > INFO > VERSION**, the **VERSION** interface is displayed. See Figure 5-270.

Figure 5-270

	Non PoC camera or no camera is connected.

# 5.21 Logout the Device

On the top right of the Main Menu interface or on any interface after you have entered the Main

Menu, click

- Select Logout, you will log out the device. •
- Select Reboot, the Device will be rebooted. •
- Select Shutdown, the Device will be turned off. •

If you do not have shutdown authority, enter gesture or password first.

# **6** Web Operations

## $\square$

- The interfaces in the Manual are used for introducing the operations and only for reference.
   The actual interface might be different dependent on the model you purchased. If there is inconsistency between the Manual and the actual product, the actual product shall govern.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Besides Web, you can use our Smart PSS to login the device. For detailed information, please refer to Smart PSS user's manual.

# 6.1 Connecting to Network

 $\square$ 

- The factory default IP of the Device is 192.168.1.108.
- The Device supports monitoring on different browsers such as Safari, fire fox, Google on Apple PC to perform the functions such as multi-channel monitoring, PTZ control, and device parameters configurations.
- <u>Step 1</u> Check to make sure the Device has connected to the network.
- <u>Step 2</u> Configure the IP address, subnet mask and gateway for the PC and the Device. For details about network configuration of the Device, see "5.1.4.4 Configuring Network Settings."
- <u>Step 3</u> On your PC, check the network connection of the Device by using "ping \*\*\*.\*\*\*.\*\*\*". Usually the return value of TTL is 255.

# 6.2 Logging in the Web

<u>Step 1</u> Open the IE browser, enter the IP address of the Device, and then press Enter. The Login in dialog box is displayed. See Figure 6-1.

Figure 6-1

XVA	Web Login
<b>گ</b>	
£	©
ТСР	•
	Forgot Password
Login	

Step 2 Enter the user name and password.

- $\square$
- The default administrator account is admin. The password is the one that was configured during initial settings. To security your account, it is recommended to keep the password properly and change it regularly.
- Click let to display the password.
- If you forget the password, click **Forgot Password** to reset the password. For details about resetting the password, see "6.3 Resetting Password."

Step 3 Click Login.

# 6.3 Resetting Password

You can reset the password by the following methods when you forget the password for admin account.

- If the password reset function is enabled, you can use mobile phone to scan the QR code on the local interface or web interface to reset the password.
- If the password reset function is disabled, the system prompts indicating password resetting function is disabled. To reset the password, try either of the following ways:
  - ♦ Login the web with other user account to enable the password reset function.
  - ♦ Go to local interface to reset the password. For details, see "5.1.3 Resetting Password."
- <u>Step 1</u> Login the Web of the Device.

The Login in dialog box is displayed. See Figure 6-2.

Figure 6-2

The reset type interface is displayed. See Figure 6-4.

Figure 6-4

<u>Step 4</u> Follow the onscreen instructions to scan the QR code and get the security code.

- $\underline{\mathbb{N}}$ 
  - You can get the security code twice by scanning the same QR code. If you need to get the security code once again, please refresh the interface.
- Please use the security code received in your email box to reset the password within 24 hours; otherwise the security code becomes invalid.
- Wrong security code entrance up to five times will cause the security code locked for five minutes. After five minutes, you can continue to use this security code.
- <u>Step 5</u> In the **Security code** box, enter the security code received in your reserved email box.
- Step 6 Click Next.

The new password resetting interface is displayed. See Figure 6-5.

Figure 6-5

Reset Password					
		<b>→</b>	2.Reset the passwor		
	User Name	admin			
	Password	•••••			
	Confirm Password	•••••			
C					
				Cancel	Save

<u>Step 7</u> In the **Password** box, enter the new password and enter it again in the **Confirm Password** box.

 $\square$ 

The new password can be set from 8 characters through 32 characters and contains at least two types from number, letter and special characters (excluding"", """, ";", ":" and "&").

Step 8 Click Save. The password resetting is started.

After resetting is completed, a pop-up message is displayed to indicate the result and you will see the login interface is displayed. Then you can use the new password to login the web.

# 6.4 Introducing Web Main Menu

After you have logged in the Web, the main menu is displayed. See Figure 6-6.

For detailed operations, you can refer to "5 Local Configurations."

Figure 6-6

Table 6-1

5	<b>P</b> D,Đ	<ul> <li>Displays Cell Phone Client and Device SN QR Code.</li> <li>Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device from your cell phone.</li> <li>Device SN: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, please refer to the P2P operation manual. You can also configure P2P function in the local configurations. See "5.1.4.5 Configuring P2P Settings."</li> </ul>				
6		Displays the web main menu.				

No.	lcon	Description
7	None	<ul> <li>Includes eight function tiles: LIVE, VIDEO, ALARM, IVS, IoT, BACKUP, DISPLAY, and AUDIO. Click each tile to open the configuration interface of the tile.</li> <li>LIVE: You can perform the operations such as viewing real-time video, configuring channel layout, setting PTZ controls, and using smart talk and instant record functions if needed.</li> <li>VIDEO: Search for and play back the recorded video saved on the Device.</li> <li>ALARM: Search for alarm information and configure alarm event actions.</li> <li>IVS: Configure the behavior detections by drawing rules for detecting tripwire, intrusion, abandoned objects, and missing objects.</li> <li>IoT: You can view, search and export the temperature and humidity data of camera and configure the alarm event settings.</li> <li>BACKUP: Search and back up the video files to the local PC or external storage device such as USB storage device.</li> <li>DISPLAY: Configure the display effect such as displaying content, image transparency, and resolution, and enable the zero-channel function.</li> <li>AUDIO: Manage audio files and configure the playing schedule. The audio file can be played in response to an alarm event if the voice prompts function is enabled.</li> </ul>

# **7** FAQ

### 1. DVR cannot boot up properly.

There are following possibilities:

- Input power is not correct.
- Power connection is not correct.
- Power switch button is damaged.
- Program upgrade is wrong.
- HDD malfunction or something wrong with HDD jumper configuration.
- Seagate DB35.1, DB35.2, SV35 or Maxtor 17-g has compatibility problem. Please upgrade to the latest version to solve this problem.
- Front panel error.
- Main board is damaged.

## 2. DVR frequently shuts down or stops running.

There are following possibilities:

- Input voltage is not stable or it is too low.
- HDD malfunction or something wrong with jumper configuration.
- Button power is not enough.
- Front video signal is not stable.
- Working environment is too harsh, too much dust.
- Hardware malfunction.

## 3. Hard disk cannot be detected.

There are following possibilities:

- HDD is broken.
- HDD jumper is damaged.
- HDD cable connection is loose.
- Main board SATA port is broken.

## 4. There is no video output whether it is one-channel, multiple-channel or all-channel output.

There are following possibilities:

- Program is not compatible. Please upgrade to the latest version.
- Brightness is 0. Please restore factory default setup.
- There is no video input signal or it is too weak.
- Check privacy mask setup or your screen saver.
- DVR hardware malfunctions.

### 5. Real-time video color is distorted.

There are following possibilities:

- When using BNC output, NTSC and PAL setup is not correct. The real-time video becomes black and white.
- DVR and monitor resistance is not compatible.
- Video transmission is too long or degrading is too huge.
- DVR color or brightness setup is not correct.

### 6. Cannot search local records.

There are following possibilities:

- HDD jumper is damaged.
- HDD is broken.
- Upgraded program is not compatible.
- The recorded file has been overwritten.
- Record function has been disabled.

## 7. Video is distorted when searching local records.

There are following possibilities:

- Video quality setup is too low.
- Program read error, bit data is too small. There is mosaic in the full screen. Please restart the DVR to solve this problem.
- HDD data jumper error.
- HDD malfunction.
- DVR hardware malfunctions.

### 8. No audio under monitor state.

There are following possibilities:

- It is not a power picker.
- It is not a power acoustics.
- Audio cable is damaged.
- DVR hardware malfunctions.

#### 9. There is audio under monitor state but no audio under playback state.

There are following possibilities:

- Setup is not correct. Please enable audio function.
- Corresponding channel has no video input. Playback is not continuous when the screen is blue.

#### 10. System time is not correct.

There are following possibilities:

- Setup is not correct.
- Battery contact is not correct or voltage is too low.
- Crystal oscillator is broken.

### 11. Cannot control PTZ on DVR.

There are following possibilities:

- Front panel PTZ error.
- PTZ decoder setup, connection or installation is not correct.
- Cable connection is not correct.
- PTZ setup is not correct.
- PTZ decoder and DVR protocol is not compatible.
- PTZ decoder and DVR address is not compatible.
- When there are several decoders, please add 120 Ohm between the PTZ decoder A/B cables furthest end to delete the reverberation or impedance matching. Otherwise the PTZ control is not stable.
- The distance is too far.

#### 12. Motion detection function does not work.

There are following possibilities:

- Period setup is not correct.
- Motion detection zone setup is not correct.
- Sensitivity is too low.

• For some versions, there is hardware limit.

## 13. Cannot log in client-end or web.

There are following possibilities:

- For Windows 98 or Windows ME user, please update your system to Windows 2000 sp4. Or you can install client-end software of lower version. Please note right now, our DVR is not compatible with Windows VISTA control.
- ActiveX control has been disabled.
- No dx8.1 or higher. Please upgrade display card driver.
- Network connection error.
- Network setup error.
- Password or user name is invalid.
- Client-end is not compatible with DVR program.

## 14. There is only mosaic no video when preview or playback video file remotely.

There are following possibilities:

- Network fluency is not good.
- Client-end resources are limit.
- There is multiple-cast group setup in DVR. This mode can result in mosaic. Usually we do not recommend this mode.
- There is privacy mask or channel protection setup.
- Current user has no right to monitor.
- DVR local video output quality is not good.

### **15. Network connection is not stable.**

There are following possibilities:

- Network is not stable.
- IP address conflict.
- MAC address conflict.
- PC or DVR network card is not good.

### 16. Burn error /USB back error.

There are following possibilities:

- Burner and DVR are in the same data cable.
- System uses too much CPU resources. Please stop record first and then begin backup.
- Data amount exceeds backup device capacity. It might result in burner error.
- Backup device is not compatible.
- Backup device is damaged.

### 17. Keyboard cannot control DVR

There are following possibilities:

- DVR serial port setup is not correct.
- Address is not correct.
- When there are several switchers, power supply is not enough.
- Transmission distance is too far.

### 18. Alarm signal cannot be disarmed.

There are following possibilities:

- Alarm setup is not correct.
- Alarm output has been open manually.
- Input device error or connection is not correct.
- Some program versions might have this problem. Please upgrade your system.

#### 19. Alarm function is null.

There are following possibilities:

- Alarm setup is not correct.
- Alarm cable connection is not correct.
- Alarm input signal is not correct.
- There are two loops connect to one alarm device.

#### 20. Remote control does not work.

There are following possibilities:

- Remote control address is not correct.
- Distance is too far or control angle is too small.
- Remote control battery power is low.
- Remote control is damaged or DVR front panel is damaged.

#### 21. Record storage period is not enough.

There are following possibilities:

- Camera quality is too low. Lens is dirty. Camera is installed against the light. Camera aperture setup is not correct.
- HDD capacity is not enough.
- HDD is damaged.

#### 22. Cannot playback the downloaded file.

There are following possibilities:

- There is no media player.
- No DXB8.1 or higher graphic acceleration software.
- There is no DivX503Bundle.exe control when you play the file transformed to AVI via media player.
- No DivX503Bundle.exe or ffdshow-2004 1012 .exe in Windows XP OS.

#### 23. Forgot local menu operation password or network password

Please contact your local service engineer or our sales person for help. We can guide you to solve this problem.

#### 24. When I login via HTTPS, a dialogue says the certificate for this website is for other address.

Please create server certificate again.

#### 25. When I login via HTTPS, a dialogue says the certificate is not trusted.

Please download root certificate again.

#### 26. When I login via HTTPS, a dialogue says the certificate has expired or is not valid yet.

Please make sure your PC time is the same as the device time.

#### 27. I connect the general analog camera to the device, there is no video output.

There are following possibilities:

- Check camera power supplying, data cable connection and other items.
- This series device does not support the analog camera of all brands. Please make sure the device supports general standard definition analog camera.

# 28. I connect the standard definition analog camera or the coaxial camera to the device, there is no video output.

There are following possibilities:

• Check camera power supplying, or camera data cable connection.

 For the product supports analog standard definition camera/HD camera, you need to go to the Main Menu > CAMERA > CHANNEL TYPE to select corresponding channel type and then restart the DVR.

#### 29. I cannot connect to the IP channel.

There are following possibilities:

- Check the camera is online or not.
- Check IP channel setup is right or not (such as IP address, user name, password, connection protocol, and port number).
- The camera has set the whitelist (Only the specified devices can connect to the camera).

# 30. After I connected to the IP channel, the one-window output is OK, but there is no multiple-window output.

There are following possibilities:

- Check the sub stream of the camera has been enabled or not.
- Check the sub stream type of the camera is H.264 or not.
- Check the device supports camera sub stream resolution or not (such as 960H, D1, and HD1).

# 31. After I connected to the IP channel, the multiple-window output is OK, but there is no one-window output.

There are following possibilities:

- Check there is video from the IP channel or not. Please go to the Main Menu > INFO > BPS to view bit stream real-time information.
- Check the main stream of the camera has been enabled or not.
- Check the main stream type of the camera is H.264 or not.
- Check the device supports camera main stream resolution or not (such as 960H, D1, and HD1).
- Check camera network transmission has reached the threshold or not. Please check the online user of the camera.

# 32. After I connected to the IP channel, there is no video output in the one-window or the multiple-window mode. But I can see there is bit stream.

There are following possibilities:

- Check the main stream/sub stream type of the camera is H.264 or not.
- Check the device supports camera main stream/sub stream resolution or not (such as 1080P, 720P, 960H, D1, and HD1).
- Check the camera setup. Please make sure It supports the products of other manufacturers.

#### 33. DDNS registration failed or cannot access the device domain name.

There are following possibilities:

- Check the device is connected to the WAN. Please check the device has got the IP address if the PPPoE can dial. If there is a router, please check the router to make sure the device IP is online.
- Check the corresponding protocol of the DDNS is enabled. Check the DDNS function is OK or not.
- Check DNS setup is right or not. Default Google DNS server is 8.8.8.8, 8.8.5.5. You can use different DNS provided by your ISP.

#### 34. I cannot use the P2P function on my cell phone or the WEB.

There are following possibilities:

- Check the device P2P function is enabled or not. (Main menu->Setting->Network->P2P)
- Check the device is in the WAN or not.
- Check cell phone P2P login mode is right or not.
- It is the specified device P2P login port or not when you are using P2P client.
- Check user name or password is right or not.
- Check P2P SN is right or not. You can use the cell phone to scan the QR code on the device P2P interface (Main Menu > Network > P2P), or you can use the version information of the WEB to confirm. (For some previous series products, the device SN is the main board SN, it might result in error.)

#### 35. I connect the standard definition camera to the device, there is no video output.

There are following possibilities:

- Check the DVR supports standard definition signal or not. Only some series product supports analog standard definition signal, coaxial signal input.
- Check channel type is right or not. For the product supports analog standard definition camera/HD camera, you need to go to the Main Menu > CAMERA > CHANNEL TYPE to select corresponding channel type (such as analog) and then restart the DVR. In this way, the DVR can recognize the analog standard definition.
- Check camera power supplying, or camera data cable connection.

#### 36. I cannot connect to the IP camera.

There are following possibilities:

- Check DVR supports IP channel or not. Only some series products support A/D switch function, it can switch analog channel to the IP channel to connect to the IP camera. From Main Menu > CAMERA > CHANNEL TYPE, select the last channel to switch to the IP channel. Some series product products support IP channel extension, it supports N+N mode.
- Check the IPC and the DVR is connected or not. Please go to the Main Menu > CAMERA > REGISTRATION to search to view the IP camera is online or not. Or you can go to the Main Menu > INFO > NETWORK > Network Test, you can input IP camera IP address and then click the Test button to check you can connect to the IP camera or not.
- Check IP channel setup is right or not (such as IP address, manufacturer, port, user name, password, and remote channel number).

#### Daily Maintenance

- Please use the brush to clean the board, socket connector and the chassis regularly.
- The device shall be soundly earthed in case there is audio/video disturbance. Keep the device away from the static voltage or induced voltage.
- Please unplug the power cable before you remove the audio/video signal cable, RS-232 or RS-485 cable.
- Do not connect the TV to the local video output port (VOUT). It might result in video output circuit.
- Always shut down the device properly. Please use the shutdown function in the menu, or you can press the power button in the front panel for at least three seconds to shut down the device. Otherwise it might result in HDD malfunction.
- Please make sure the device is away from the direct sunlight or other heating sources. Please keep the sound ventilation.
- Please check and maintain the device regularly.

## Appendix 1 Cybersecurity Recommendations

Cybersecurity is more than just a buzzword: it's something that pertains to every device that is connected to the internet. IP video surveillance is not immune to cyber risks, but taking basic steps toward protecting and strengthening networks and networked appliances will make them less susceptible to attacks. Below are some tips and recommendations on how to create a more secured security system.

#### Mandatory actions to be taken for basic equipment network security:

#### 1. Use Strong Passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use overlapped characters, such as 111, aaa, etc.;

#### 2. Update Firmware and Client Software in Time

- According to the standard procedure in Tech-industry, we recommend to keep your equipment (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the equipment is connected to the public network, it is recommended to enable the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
- We suggest that you download and use the latest version of client software.

#### "Nice to have" recommendations to improve your equipment network security:

#### 1. Physical Protection

We suggest that you perform physical protection to equipment, especially storage devices. For example, place the equipment in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable equipment (such as USB flash disk, serial port), etc.

#### 2. Change Passwords Regularly

We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

#### 3. Set and Update Passwords Reset Information Timely

The equipment supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, it is suggested not to use those that can be easily guessed.

#### 4. Enable Account Lock

The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

#### 5. Change Default HTTP and Other Service Ports

We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

#### 6. Enable HTTPS

We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

#### 7. Enable Whitelist

We suggest you to enable whitelist function to prevent everyone, except those with specified IP addresses, from accessing the system. Therefore, please be sure to add your computer's IP address and the accompanying equipment's IP address to the whitelist.

#### 8. MAC Address Binding

We recommend you to bind the IP and MAC address of the gateway to the equipment, thus reducing the risk of ARP spoofing.

#### 9. Assign Accounts and Privileges Reasonably

According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

#### 10. Disable Unnecessary Services and Choose Secure Modes

If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up strong passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

#### 11. Audio and Video Encrypted Transmission

If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

Reminder: encrypted transmission will cause some loss in transmission efficiency.

#### 12. Secure Auditing

- Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
- Check equipment log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

#### 13. Network Log

Due to the limited storage capacity of the equipment, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

#### 14. Construct a Safe Network Environment

In order to better ensure the safety of equipment and reduce potential cyber risks, we recommend:

• Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.

- The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, it is suggested to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.
- Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.

Abbreviations	s in this glossary are related to the Manual.
	Full term
BNC	Bayonet Nut Connector
CBR	Constant Bit Rate
CIF	Common Intermediate Format
DDNS	Dynamic Domain Name Service
DHCP	Dynamic Host Configuration Protocol
DNS	Domain Name System
DST	Daylight Saving Time
DVR	Digital Video Recorder
FTP	File Transfer Protocol
HDD	Hard Disk Drive
HDMI	High Definition Multimedia Interface
HTTP	Hyper Text Transfer Protocol
loT	Internet of Things
IP	Internet Protocol
IVS	Intelligent Video System
LAN	Local Area Network
MAC	Media Access Control
MTU	Maximum Transmission Unit
NTP	Network Time Protocol
NTSC	National Television Standards Committee
ONVIF	Open Network Video Interface Forum
PAL	Phase Alteration Line
PAT	Port Address Translation
POS	Point of Sale
PPPoE	Point-to-Point Protocol over Ethernet
PSS	Professional Surveillance Software
PTZ	Pan Tilt Zoom
RCA	Radio Corporation of American
RTSP	Real Time Streaming Protocol
S.M.A.R.T	Self-Monitoring-Analysis and Reporting Technology
SATA	Serial Advanced Technology Attachment
SMTP	Simple Mail Transfer Protocol
SNMP	Simple Network Management Protocol
ТСР	Transmission Control Protocol
TFTP	Trivial File Transfer Protocol
UDP	User Datagram Protocol
UPnP	Universal Plug and Play
VBR	Variable Bit Rate

Abbreviations	Full term
VGA	Video Graphics Array
WAN	Wide Area Network

Calculate total capacity needed by each DVR according to video recording (video recording type and video file storage time).

<u>Step 1</u> According to Formula (1) to calculate storage capacity  $q_i$  that is the capacity of each channel needed for each hour, unit MB.

Formula (1): 
$$q_i = d_i \div 8 \times 3600 \div 1024$$

In the formula:  $d_i$  means the bit rate, unit Kbit/s

<u>Step 2</u> After video time requirement is confirmed, according to Formula (2) to calculate the storage capacity  $m_i$ , which is storage of each channel needed unit MB.

Formula (2): 
$$m_i = q_i \times h_i \times D_i$$

In the formula:

- $h_i$  means the recording time for each day (hour)
- $D_i$  means number of days for which the video shall be kept
- <u>Step 3</u> According to Formula (3) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in the DVR during **scheduled video recording**.

Formula (3): 
$$q_T = \sum_{i=1}^{c} m_i$$

In the formula: c means total number of channels in one DVR

<u>Step 4</u> According to Formula (4) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in DVR during **alarm video recording (including motion detection)**.

Formula (4): 
$$q_T = \sum_{i=1}^{c} m_i \times a\%$$

In the formula: a% means alarm occurrence rate

You can refer to the following table for the file size in one hour per channel. (All the data listed below are for reference only.)

Bit stream size (max)	File size	Bit stream size (max)	File size
96Kbps	42MB	128Kbps	56MB
160Kbps	70MB	192Kbps	84MB
224Kbps	98MB	256Kbps	112MB
320Kbps	140MB	384Kbps	168MB
448Kbps	196MB	512Kbps	225MB

Bit stream size (max)	File size	Bit stream size (max)	File size
640Kbps	281MB	768Kbps	337MB
896Kbps	393MB	1024Kbps	450MB
1280Kbps	562MB	1536Kbps	675MB
1792Kbps	787MB	2048Kbps	900MB

## Appendix 4.1 Compatible USB list

Manufacturer	Model	Capacity	
Sandisk	Cruzer Micro	512MB	
Sandisk	Cruzer Micro	1GB

## Appendix 8.1 What Is the Surge

Surge is a short current or voltage change during a very short time. In the circuit, it lasts for microsecond. In a 220V circuit, the 5KV or 10KV voltage change during a very short time (about microseconds) can be called a surge. The surge comes from two ways: external surge and internal surge.

- The external surge: The external surge mainly comes from the thunder lightning. Or it comes from the voltage change during the on/off operation in the electric power cable.
- The internal surge: The research finds 88% of the surge from the low voltage comes from the internal of the building such as the air conditioning, elevator, electric welding, air compressor, water pump, power button, duplicating machine and other device of inductive load.

The lightning surge is far above the load level the PC or the micro devices can support. In most cases, the surge can result in electric device chip damage, PC error code, accelerating the part aging, data loss and etc. Even when a small 20 horsepower inductive engine boots up or stops, the surge can reach 3000V to 5000V, which can adversely affect the electronic devices that use the same distribution box.

To protect the device, you need to evaluate its environment, the lighting affection degree objectively. Because surge has close relationship with the voltage amplitude, frequency, network structure, device voltage-resistance, protection level, ground and etc. The thunder proof work shall be a systematic project, emphasizing the all-round protection (including building, transmission cable, device, ground and etc.). There shall be comprehensive management and the measures shall be scientific, reliable, practical and economic. Considering the high voltage during the inductive thundering, the International Electrotechnical Commission (IEC) standard on the energy absorbing step by step theory and magnitude classification in the protection zone, you need to prepare multiple precaution levels.

You can use the lightning rod, lightning strap or the lightning net to reduce the damage to the building, personal injury or the property.

The lightning protection device can be divided into three types:

- Power lightning arrester: There are 220V single-phrase lightning arrester and 380V three-phrase lightening arrester (mainly in parallel connection, sometimes use series connection) You can parallel connect the power lightning arrester in the electric cable to reduce the short-time voltage change and release the surge current. From the BUS to the device, there are usually three levels so that system can reduce the voltage and release the current step by step to remove the thunderstorm energy and guarantee the device safety. You can select the replaceable module type, the terminal connection type and portable socket according to your requirement.
- Signal lightning arrester: This device is mainly used in the PC network, communication system. The connection type is serial connection. Once you connected the signal lightning

arrestor with the signal port, it can cut the channel of the thunderstorm to the device, and on the other hand, it can discharge the current to the ground to guarantee the device proper work. The signal lightning arrester has many specifications, and widely used in many devices such as telephone, network, analog communication, digital communication, cable TV and satellite antenna. For all the input port, especially those from the outdoor, you need to install the signal lightning arrester.

• Antenna feed cable lightning arrester: It is suitable for antenna system of the transmitter or the device system to receive the wireless signal. It uses the serial connection too.

Please note, when you select the lighting arrester, please pay attention to the port type and the earthing reliability. In some important environment, you need to use special shielded cable. Do not parallel connect the thunder proof ground cable with the ground cable of the lightning rod. Please make sure they are far enough and grounded respectively.

## Appendix 8.2 The Earthing Modes

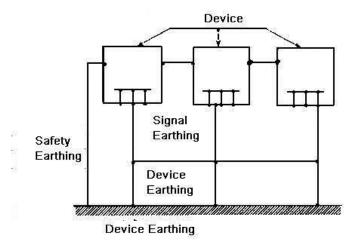

We all know the earthing is the most complicated technology in the electromagnetism compatibility design since there is no systematic theory or module. The earthing has many modes, but the selection depends on the system structure and performance.

The following are some successfully experience from our past work.

• **One-point ground:** In the following figure you can see there is a one-point ground. This connection provides common point to allow signal to be transmitted in many circuits. If there is no common point, the error signal transmission occurred. In the one-point ground mode, each circuit is just grounded only and they are connected at the same point. Since there is only one common point, there is no circuit and so, there is no interference.

• **Multiple-point ground:** In the following figure, you can see the internal circuit uses the chassis as the common point. While at the same time, all devices chassis use the earthing as the common point. In this connection, the ground structure can provide the lower ground resistance because when there are multiple-point grounds; each ground cable is as short as possible. And the parallel cable connection can reduce the total conductance of the ground conductor. In the high-frequency circuit, you need to use the multiple-point ground mode and each cable needs to connect to the ground. The length shall be less than the 1/20 of the signal wavelength.

 Mixed ground: The mix ground consists of the feature of the one-point ground and multiple-point ground. For example, the power in the system needs to use the one-point ground mode while the radio frequency signal requires the multiple-point ground. So, you can use the following figure to earth. For the direct current (DC), the capacitance is open circuit and the circuit is one-point ground. For the radio frequency signal, the capacitance is conducive and the circuit adopts multiple-point ground.

When connecting devices of huge size (the device physical dimension and connection cable is big comparing with the wave path of existed interference), then there are possibility of interference when the current goes through the chassis and cable. In this situation, the interference circuit path usually lies in the system ground circuit.

When considering the earthing, you need to think about two aspects: One is the system compatibility, and the other is the external interference coupling into the earth circuit, which results in system error. For the external interference is not regular, it is not easy to resolve.

## Appendix 8.3 Thunder Proof Ground Method in the Monitor

## System

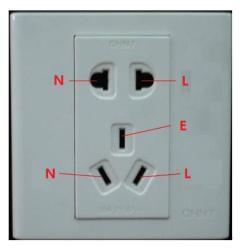

- The monitor system shall have sound thunder proof earthing to guarantee personnel safety and device safety.
- The monitor system working ground resistance shall be less than 1Ω.
- The thunder proof ground shall adopt the special ground cable from the monitor control room to the ground object. The ground cable adopts copper insulation cable or wire and its ground section shall be more than 20mm<sup>2</sup>.
- The ground cable of the monitor system can not short circuit or mixed connected with the strong alternative current cable.
- For all the ground cables from the control room to the monitor system or ground cable of other monitor devices, please use the copper resistance soft cable and its section shall be

more than 4mm<sup>2</sup>.

- The monitor system usually can adopt the one-point ground.
- Please connect the ground end of 3-pin socket in the monitor system to the ground port of the system (protection ground cable)

# Appendix 8.4 The Shortcut Way to Check the Electric System by Digital Multimeter

For 220V AC socket, from the top to the bottom, E (ground cable), N (neutral cable), L(live cable). Please refer to the following figure.

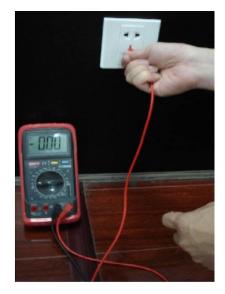

There is a shortcut way to check these thee cables connection are standard or not (not the accurate check).

# 

In the following operations, the multimeter range shall be at 750V.

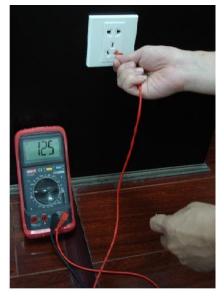

## For E (earth cable)

Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the E port of the socket. See the following figure. If the multimeter shows 0, then you can see current earth cable connection is standard. If the value is more than 10, then you can know there is inductive current and the earth cable connection is not proper.

#### For L (live cable)

Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the L port of the socket. See the following figure. If the multimeter shows 125, then you can see current live cable connection is standard. If the value is less than 60, then you can know current live cable connection is not proper or it is not the live cable at all.

#### For N (Neutral cable)

Turn the digital multimeter to 750V AC, use your one hand to hold the metal end, and then the other hand insert the pen to the N port of the socket. See the following figure. If the multimeter shows 0, then you can see current N cable connection is standard. If the value is more than 10, then you can see there is inductive current and the neutral cable connection is not proper. If the value is 120, then you can know that you have misconnected the neutral cable to the live cable.

Here we are going to make standard RS-232 port and standard RJ45 (T568B). Please refer to the following figure for RJ45 cable definition.

Please refer to the following figure for RS-232 pin definition.

#### **Cross Connection**

Please refer to the following figure for connection information.

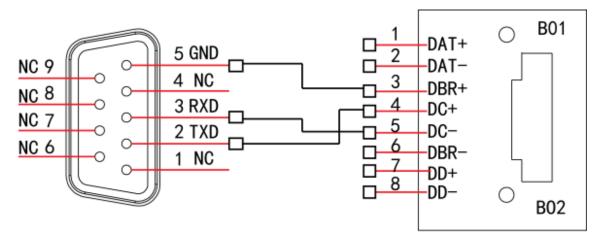

Please refer to the following table for detailed crossover cable connection information.

RJ45 (T568B)	RJ45 (Network cable)	RS-232	Signal Description
4	Blue	2	RXD
5	White and blue	3	TXD
3	White and green	5	GND

## **Straight Connection**

Please refer to the following figure for straight cable connection information.

RS232

RJ45

Please refer to the following table for straight connection information.

RJ45 (T568B)	RJ45 (Network cable)	RS-232	Signal Description
4	Blue	3	RXD
5	White and blue	2	TXD
3	White and green	5	GND
