Welcome

Thank you for using our Smart Professional Surveillance System (SmartPSS)!
This user’s manual is designed to be a reference tool for operation of your system. Here you can find detailed operation information about SmartPSS.
1. Overview and Environment

1.1 Overview

SmartPSS is an abbreviation for Smart Professional Surveillance System. The software is to manage small quantity security surveillance devices. It releases with the device and does not support the products from other manufacturers. It has the following features:

- View real-time video of several camera channels.
- View the playback video files from various cameras.
- Support multiple scheduled arms to realize auto PC guard.
- Support e-map; you can clearly view and manage all device locations.
- Video wall preview.
- People count and heat map.
- Search and export log.

1.2 SmartPSS Interface

SmartPSS software interface includes 5 parts: function tab, system info, function list, shortcut, and help. See Figure 1-1.
<table>
<thead>
<tr>
<th></th>
<th>Function tab</th>
<th>Open function in New tab by clicking <strong>+</strong>, you can open new tab.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Help</td>
<td>- click <strong>➕</strong>, switch user.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- click <strong>⌥</strong>, lock screen</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- click <strong>⌥</strong>, go to config page</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- click ? , get help document</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- click ⏹️, min page</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- click ⏹️, max page</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- click ✗, exit</td>
</tr>
<tr>
<td>3</td>
<td>System Info</td>
<td>![16:24:54] : show system time</td>
</tr>
<tr>
<td></td>
<td></td>
<td>click ⏹️, CPU occupancy and condition</td>
</tr>
<tr>
<td>4</td>
<td>Shortcut</td>
<td>click ⏹️, quickly enter Event tab</td>
</tr>
<tr>
<td>5</td>
<td>Function list</td>
<td>Include preview, playback, event, video wall, people count,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>log, event setup, device manager, device config, PC-NVR, tour</td>
</tr>
<tr>
<td></td>
<td></td>
<td>plan, user and heat map</td>
</tr>
</tbody>

<td>Intel HD Graphics and higher.</td>
</tr>
<tr>
<td>Memory</td>
<td>2GB or higher.</td>
</tr>
<tr>
<td>Display Resolution</td>
<td>1024×768 or higher.</td>
</tr>
</tbody>
</table>

Steps

Step 1. Double click SmartPSS. See Figure 2-1.

   Note:
   Default username is admin, without password. Please set password at first time login.

   ![Figure 2-1](image)

Step 2. Enter username and password. Click login. See Figure 2-2.

   Note:
   ● When you check remember password, you do not need to enter password again at next login. When you check both remember password and auto login, you can auto login at next login.
   ● After you add device, you can see homepage, see Figure 2-2.
<table>

</table>

Figure 2-2
3. Devices

Here you can add a single device or batch device via auto search. You also can config and operate device.

3.1 Auto Search

Step 1. In Devices, click Search.
Step 2. Set device segment and click Search. See Figure 3-1.
Note:
- Click Refresh, to refresh searched device.
- Check IP of device
- Check device IP you want to modify, click Modify IP to change IP. See Ch 3.4.

Step 3. Check device you want to add, click Add.
Step 4. Click OK. Login box pops up.
Step 5. Enter device username and password. Click OK. After you add device, click Cancel, so system shows device list added. See Figure 3-2.
- After device is added, you can view device name, IP/domain, type, model, port, channel number, online status, SN and operate device.
- After device is added, in Devices it auto shows device type tab, you can view added device here.
- For different devices, please note that interface subject to actual interface.
  - Click of device, to modify device info.
  - Click of device, to go to device config page.
  - Click of device to exit device. When icon changes to , click again to re-login.
✧ Check device you want to delete, click Delete to batch delete them. Click \( \text{CONFIRM} \) of device to delete one by one.
✧ Check device you want to export and click Export.
✧ When show device code is selected in system setup, device is shown with \( \text{TX} \). You can click it to customize device code. This is mainly used for operation via keyboard.

![Figure 3-2](image)

### 3.2 Manually Add

Step 1. In Devices interface, click Add, see Figure 3-3.
Step 2. Set device parameter, see the following chart.

<table>
<thead>
<tr>
<th>Item</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device name</td>
<td>Please input a device name here.</td>
</tr>
<tr>
<td>Method to add</td>
<td>By IP/domain and SN.</td>
</tr>
<tr>
<td>IP/Domain name</td>
<td>Device IP address or domain name. Note: You can add device of IPV6 address.</td>
</tr>
<tr>
<td>SN</td>
<td>Device SN. Note: For P2P device only.</td>
</tr>
<tr>
<td>Port</td>
<td>Device IP port. It is 37777 by default.</td>
</tr>
<tr>
<td>Group Name</td>
<td>You can choose one group.</td>
</tr>
<tr>
<td>User name</td>
<td>The user name you login the device.</td>
</tr>
<tr>
<td>Password</td>
<td>The password you login the device.</td>
</tr>
</tbody>
</table>

Figure 3-3

Step 3. Click Add, complete adding of device. Click Save and Continue to add more devices.
3.3 Batch Import and Add Device

Before you batch import device, you shall get device info. You can export device info to get device info file.

Step 1. In Devices, click Import. See Figure 3-4.

![Device Import](image)

Figure 3-4

Step 2. According to actual condition, select import method.
- Select Local tab to select device info locally.
- Select From www.easy4ip.com, enter username and password.

Step 3. Click Import. When successfully imported device, system shows a message, click OK.

3.4 Modify IP

Step 1. In Devices interface, click Search.

Step 2. Set device segment and click Search. See Figure 3-5.
Step 3. Check device you want to modify IP, click Modify IP.
Step 4. Enter username and password. Click OK.

- When you check a single device, system pops up Modify IP box, see Figure 3-6.

- When select more than one device, system pops up Batch Modify IP box, see Figure 3-7.
Figure 3-7

Step 5. Set device new IP, start IP, subnet mask and gateway.
Step 6. Click Save.
4. Preview

4.1 Live view

You can live view video, local record, snapshot, enable audio, talk, instant playback, zoom in video, switch stream, config device parameter, config intelligent channel, config master-slave track, update channel info and etc.

In New tab, click Live View, see Figure 4-1.

<table>

  - ![image](image7.png) In the standard interface split area, select the video window display mode, click ![image](image8.png) at the upper right corner of the display, The latest collection of three video window display mode is displayed in the preview interface on the toolbar.  
  - ![image](image9.png) In the Custom Split area, click ![image](image10.png), Custom video window display mode.  
  - Click ![image](image11.png) or select the video window, right select full screen, video window full screen display. |

### 4.2 E-Map

Via E-map you can straightly known the location of video channel or alarm channel and live preview.

#### 4.2.1 New Map

Step 1. Right click group in Organization Tree, select New Map. See Figure 4-2.
Step 2. Set map name, select path of picture.
Step 3. Click Save. See Figure 4-3.
Note:
- Click create new hot zone on map, see Ch 4.2.2.
- Click modify map name or replace map.
- Click to adjust opacity.
- At the lower right corner, you can see aerial view of map. Click to close aerial view and click to open aerial view.
Step 4. Drag camera to corresponding monitor position on map to adjust camera monitor range, or drag camera alarm input into map.

Step 5. Click 🔄 to save map.

Step 6. View device live preview on map.
   a) Open Live interface, in device list double click heat map or drag heat map into preview window.
   b) On map click camera or place mouse on camera for a few seconds, in the pop-up window you can view live preview.

Note:
- Click map preview window, right click and select Open All Channels, at bottom of preview window it shows live of all devices.
- Click preview window on map, right click Video Wall, and in pop-up window it shows live of all devices.

4.2.2 New Hot Zone
For hot zone, you can add corresponding picture on map.

Step 1. In e-map interface, click 🗺. See Figure 4-4.
Step 2. Set map name, select picture path.
Step 3. Click Save. See Figure 4-5.
Note:

- Click to create new zone.
- Click to modify heat map name or replace heat map.
- Click to modify heat map name or replace heat map.
- Click to adjust camera monitor range opacity.
- At the lower right corner, you can see aerial view of heat map. Click , to close aerial view and click to open aerial view.
- At the lower left corner, click picture window to return to previous heat zone or map.
Step 4. Double click heat map, drag camera to corresponding monitor position on map to adjust camera monitor range.

Step 5. Click 📷 to save heat map.

Step 6. View device live preview on map.
   c) Open Live interface, in device list double click heat map or drag heat map into preview window.
      Note:
      In heat map preview window status bar, click 🔄 to return to map preview.
      d) On map click camera or place mouse on camera for a few seconds, in the pop-up window you can view live preview.
      Note:
      • Click map preview window, right click and select Open All Channels, at bottom of preview window it shows live of all devices.
      • Click preview window on map, right click Video Wall, and in pop-up window it shows live of all devices.

4.3 Config IVS Channel
By setting IVS channel, you can mark depth of field of IVS plan. Different cameras support different IVS plan, subject to actual interface.
Step 1. Right click device in Organization Tree in Live View interface, select IVS Channel Config. See Figure 4-6.

Step 2. Click highlighted IVS plan, and click IVS icon you need, select IVS plan.
Step 3. Click Next. See Figure 4-7.

Figure 4-6
Step 4. Mark depth of field.
  a) Click the mark area in the video window to draw the mark area, right-click to draw after drawing to complete.
     At least 3 points are required to draw in the mark area.
  b) Set the length of the vertical ruler, click \[ \text{draw vertical ruler in the mark area, left-click to complete the drawing.} \]
     Repeat this step to add 3 vertical rulers to the mark area.
  c) Set the length of the horizontal ruler, click \[ \text{draw a horizontal ruler in the mark area, left-click to complete the drawing.} \]

Note:
- Select vertical or horizontal ruler, click Re-draw, re-draw the ruler, select the calibration area, click Redraw, redraw the calibration area, the vertical scale and the horizontal ruler.
- Select the vertical or horizontal ruler, click Delete, delete the ruler; Select the calibration area, click Delete, delete the calibration area, vertical ruler and horizontal ruler.

Step 5. (Optional) Measure distance vertically or horizontally.
Note:
When you need to measure, you need to follow this step.

a) Click Apply, to save marked depth of field.

b) Measure distance.
   - Click vertical distance, and mark vertical line in marked area, system shows drawn vertical length.
   - Click horizontal distance, and mark horizontal line in marked area, system shows drawn horizontal length.

Step 6. Click Save.

4.4 Smart Track Config (Fisheye+Dome)

Step 1. In Live View interface, right click fisheye device, select Master0slave tracking config, see Figure 4-8.

![Smart Track Config](image)

Figure 4-8

Step 2. Link speed dome.

a) In Link Speed Dome area, click next to fisheye name.

b) In speed dome dropdown list, select speed dome, click Save. See Figure 4-9.

Note:
You can adjust speed dome iris, zoom and focus.

- Click to enable or disable mouse stimulation, by default it is ON.

- Click or to zoom.

- Click or to focus.
• Click [+] or [-] to adjust iris.

• Click [+] to draw a box via mouse on the monitor video, and speed dome will rotate and focus to this scene quickly,

• [ ] and [+] cannot be enabled at the same time.

Step 3. Add mark point.
   a) Click Add, in fisheye live preview interface shows mark box. Drag mark box to suitable position.
   b) Be default, to enable mouse stimulation, use mouse to drag speed dome video to suitable position.
   c) In mark point list, click [✓] of corresponding mark point, save.

Repeat step 1 to 2 to add at least three mark points.

Step 4. Click OK.
Step 5. View smart track.
   a) Right click the fisheye device, select master-slave tracking.
      See Figure 4-10.

   • Link mode is enabled by default, click [ ] to correct fisheye mode and switch link mode.
      Enable fisheye correction, and in fisheye preview window, right click and select fisheye installation method and view mode. See Ch 4.7.
   • On the left you can set PTZ, see Ch 4.6.
b) In fisheye device preview interface click any spot, speed dome on the right auto links to the corresponding position.

4.5 Smart Track Config (Dome+Fixed)

After you have configured dome and fixed camera linkage, when intelligent rule of fixed camera triggers alarm, speed dome auto links to corresponding position and tracks object until the object exceeds monitor range or tracking time limit.

**Condition**

Fixed camera has set trip wire, zone, loitering or fast move intelligent rule.

**Steps**

Step 1. In Organization Tree of preview interface, right click fixed camera, select Master-slave tracking config, see Figure 4-11.
Step 2. Link speed dome.
   a) In Link Speed Dome area, right click host name.
   b) In dropdown list, select speed dome.
   c) Config track parameter, see

<table>
<thead>

</tr>
<tr>
<td>Idle length</td>
<td>Check Enable, to enable idle length, when speed dome no tracking time exceed set idle time, speed dome will rotate to corresponding position as set.</td>
</tr>
</tbody>
</table>

d) Click Save. See Figure 4-12.

Note:
You can adjust speed dome iris size, zoom and focus.

- Click [ ] , enable to disable mouse stimulation, by default is in enabled.
- Click [ ] or [ ] to zoom.
- Click [ ] or [ ] to focus.
- Click [ ] or [ ] to adjust iris.
- Click [ ] to draw a box via mouse in monitor video, speed dome will quickly position to it.
- [ ] and [ ] cannot be enabled at the same time.
Step 3. Add mark point. 
Step 4. Add mark point. 
   a) Click Add, in fixed camera live preview interface shows mark box. Drag mark box to suitable position.
   b) Be default, to enable mouse stimulation, use mouse to drag speed dome video to suitable position.
   c) In mark point list, click of corresponding mark point, save.

Note:
Click Clear to delete all mark points.
Repeat step1 to 3 to add at least four mark points.
   d) (Optional) you can select preset in Preset.
      When speed dome tracking time exceed set idle time, speed dome will rotate to corresponding position.
      Note:
      When idle length is enabled, need to run this step.
Step 5. Click OK.
Step 6. View smart track.
   a) Right click the fixed camera device, select master-slave tracking. See Figure 4-13.
      - Link mode is enabled by default, click to disable auto tracking.
      - On the left you can set PTZ, see Ch 4.6.

b) When fixed camera preview interface intelligent rule triggers alarm, speed dome on the right auto link to corresponding position and track object until the object exceeds monitor range or exceed tracking length.
4.6 PTZ

Different device PTZ have different setup interface, subject to actual condition. See the following figures and charts.

</tr>
</tbody>
</table>
### 4.6.1 Preset

By setting the preset point, you can quickly go to the preset position corresponding to the camera.

**Step 1.** Via PTZ direction control the camera to designated position.

**Step 2.** In Preset, select preset, click .

**Step 3.** In select preset no., enter preset name.

**Step 4.** Click to save preset.

**Step 5.** Click to delete non-necessary preset.

**Step 6.** Select preset and click , camera rotates to corresponding position.

### 4.6.2 Tour

By setting the tour, the camera can tour between the different preset points.

**Warning:**
Set at least two presets before you can tour.

**Step 1.** In Preset, select tour, and click . See Figure 4-17.
Step 2. Set tour no. and tour name.

Step 3. Select preset.
   a) In Preset list select preset, and enter time.
   b) Click to add preset.
      Repeat this step to add more presets.

Step 4. Click OK.

Step 5. You need to select tour no., click so camera will tour among different presets.

4.6.3 Scan

By setting the two borders, the camera rotates repeatedly between the two borders.

Step 1. In select Scan.

Step 2. By control PTZ direction, rotate PTZ to designated left position, click to set left border.

Step 3. By control PTZ direction, rotate PTZ to designated right position, click to set right border.

Step 4. Click to repeat rotation among two borders.

4.6.4 Pattern

Record down camera rotation process, via pattern rotation function.
Step 1. In preset, select Pattern.

Step 2. Click to start to set pattern, and zoom, focus or rotate camera.

Step 3. Click to complete.

Step 4. Select pattern no., click , camera rotate pattern according to record.

### 4.7 Fisheye View Mode

Only fisheye device supports installation and view mode, different installation modes corresponding to view mode referring to the following chart.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
5. Tour & Task

By setting tour plan, you can tour each window.

Step 1. In New function tab, click Tour & Task.

Step 2. Add tour plan.

   a) Click Add. See Figure 5-1.

   ![Figure 5-1](image)

   b) Double click tour plan name or click ![edit](image) to modify tour plan name.

Step 3. Set task.

   a) Click ![add](image). See Figure 5-2.
b) Set task name and time span, according to actual condition click to set tour window number.

c) Double-click the channel of the device or drag the channel of the device into the video window in the order that you want. See Figure 5-3.

Note:

- In the Organization Tree, right-click a storage device, select the Bind all channels, the storage channel in turn is bound to the corresponding video window; select the video window to be bound in the Organization Tree, right-click a storage device, select the tie given zero channels zero bound channel to the selected video window.

- Select the video window to be bound, under the Organization Tree, right-click the channel storage devices, select the Bind channel, the channel will be bound to the selected video window.

- Select Bind video window, right-click the organizational tree in the front-end device, select the Bind IPC, the front-end device bind to the selected video window.

- After the video channel bonding, right-click the video window, remove binds or remove all binds.
d) Set channel preset, time span, stream type and channel sequence.
   
   **Note:**
   
   - Click  of the corresponding channel, in the left preview screen to display live preview or e-map information.
   
   - Click  or  of the corresponding channel, adjust the channel sequence in the task.
   
   - Click  of the corresponding channel, delete the corresponding channel.

  
  e) Click Save, See Figure 5-4.
Step 4. Enable tour task.
   a) In New function tab, click Preview.
   b) Click tour plan below.
   c) Click to run the plan.
6. Playback

6.1 Playback

You can playback and export device record, device picture, local record and local picture.

In New tab, select Playback, see Figure 6-1.

<table>
<thead>
<tr>
<th>No.</th>

</tbody>
</table>
| 2 | **Logout and login**  
When the Default Device Tree is set to Device Tree (by device), right-click the device and select Logout. The software and device are disconnected. After logging out, right-click the device, select Login, reconnect device. |
|   | **View**  
In the Device tab, click \( \sqrt{\text{view}} \) behind View. Open View interface, playback view video device.  
For details, refer to Ch 4.1. |
| 3 | **View playback stream information**  
Choose video window with open video, in status bar it displays the playback stream information. |
|   | **Snapshot**  
Select open video window, click \( \sqrt{\text{Screenshot}} \) or right-click to select Snapshot, Snapshot a single picture.  
You can click \( \sqrt{\text{Take a screenshot}} \) in the homepage, modify the path to save the picture. |
|   | **Zoom**  
Select open playback video window, click \( \sqrt{\text{Zoom}} \). |
|   | **Close window**  
Select Open playback video window, click \( \sqrt{\text{Close Window}} \) or right-click to select Close Window. |
|   | **Close all windows**  
Select the video window, right-click to select Close all windows. |
| 4 | **Set aspect ratio**  
Select the video window, right-select Window Scale, select the video aspect ratio. |
|   | **Enable Audio**  
You can turn on the audio through the following two ways.  
- Select open playback video window, right-select Audio.  
- Playback control toolbar at the click \( \sqrt{\text{Volume}} \), and adjust the volume. |
|   | **Set the device record search criteria**  
In the Devices tab, select the device or view, select Record, set the record type, stream, start time and end time, click Search, the recording information is displayed in the schedule box.  
- Record type includes all types of video record, general record, alarm record, motion detection record, intelligent record and card record.  
- Stream includes main stream and sub stream.  
- Interval of start time and end time must be within a day. |
|   | **Set the device picture search criteria**  
In the Devices tab, select the device, or view, select Picture, set the start time and end time, click Search, image information is displayed in the playback window.  
Interval of start time and end time must be within a day. |
|   | **Time**  
Show existing video display information. |

6.2 Playback Device Record

Condition
There is device record inside channel.

Steps:
Step 1. In playback interface, click Device tab.
Step 2. In Organization Tree, select device channel or select view in View.
Step 3. Select record and set record search criteria.
   a) Select record type and stream, and set time.
   b) Click Search.
Step 4. Select window with record, click

See Figure 6-2.

![Figure 6-2](image)

6.3 Export Device Record

Condition
There is device record inside channel.

Steps:
Step 1. In playback interface, click Device tab.
Step 2. In Organization Tree, select device channel or select view in View.
Step 3. Set record search criteria.
   a) Select record type and stream, and set time.
   b) Click Search.
Step 4. Select window with record, click 🎥.

Step 5. Click 🎥, system select one record, and adjust record part according to actual need, click 🎥 again to export record. See Figure 6-3.

![Export Setup](image)

**Figure 6-3**

Step 6. Select export path and format.

Note:
When the Export Format is set to Original Format, please also check the Export Smart Player, export original format player.

Step 7. Click OK.

The system displays the playback stop information, click OK.

The system displays the Export Progress dialog box, as Figure 6-4 below.
After recording the download is complete, the system prompts the download is complete. Click Exporting tab, you can view the video download progress, pause the video being exported to continue downloading paused video, download it again failed to download videos and delete are exporting video; click exported tab, you can view download history and open video storage path.
6.4 Playback Device Picture

**Condition**
There is device picture inside channel.

**Steps**
Step 1. In Playback interface, select Device tab.
Step 2. In Organization Tree, select device channel or in View select view.
Step 3. Select picture and set time. See Figure 6-5.

Click on the right, you can open and close device picture list.

In device picture list, click , device picture list will be shown in format of list; click , device picture list is shown in format of thumbnail.

Step 4. Playback picture.
- Manual playback: Click Next or Preview.
- Auto playback: Slide to auto play, and set interval, system will auto playback local picture.
6.5 Export Device Picture

Step 1. In Playback interface, select Device tab.
Step 2. In Organization Tree select device channel or in View select view.
Step 3. Select Picture and set time.

Step 4. Click on the right, to export device picture.

Step 5. Click See Figure 6-6.

![Export Setup](image)

Figure 6-6

Step 6. Select export path, click OK. See Figure 6-7.

Click Exported tab, you can view download record, open picture storage path and delete downloaded file.

![Exported Tab](image)

Figure 6-7

6.6 Playback Local Record
**Condition**  
There is local record in the channel, see Ch 4.1.

**Steps**  
Step 1. In Playback interface, select Local tab.  
Step 2. Click Record tab.  
   System shows local record list.  
   In local record list, click , display in list mode. Click , display in thumbnail mode.  
Step 3. Select record to playback, click or double click record.  
See Figure 6-8.  

**Note:**  
You can click to open local record file for playback.

![Figure 6-8](image.png)

**6.7 Export Local Record**  
You can export local record.

**Condition**  
There is local record in this channel, see Ch 4.1.
**Steps**
Step 1. In Playback interface, click Local tab.
Step 2. Click Record tab.
Step 3. Check record to export, click ![Export](image). See Figure 6-9.

Step 4. Select export path and format.
   Note: When Export Format is set to Original Format, please check Export Smart Player to export.
Step 5. Click OK.

The system displays the Export Progress dialog box, as Figure 6-10 shown.
After record download is complete, the system prompts the download is complete.
Click Exporting tab, you can view the video download progress, pause the exported video, resume download paused, and delete videos are exporting video; click Exported tab, you can view the download history, open video storage path and delete the downloaded file.
6.8 Playback Local Picture

**Condition**
There is local picture in the channel, see Ch 4.1.

**Steps**
Step 1. In Playback interface, select Local tab.
Step 2. Click Picture tab.
   System shows local record list.
   In local picture list, click , display in list mode. Click , display in thumbnail mode.

Step 3. Select picture to playback, click or double click picture
See Figure 6-11.
Step 4. Playback picture.

- Manual playback: Click Next or Preview.

- Auto playback: Slide to auto play, and set interval, system will auto playback local picture.
7. Log Search

7.1 Search Client Log

Step 1. In New tab, click Log.

Step 2. Select . System shows Client interface.

Step 3. Set time, type, keyword. Client log includes system log, operation log and alarm log.

Step 4. Click Search. See Figure 7-1.

Note:
After log is successfully searched, you can click Export to export log.

![Figure 7-1](image)

7.2 Search Device Log

Step 1. In New tab, click Log.

Step 2. Select .

Step 3. Set time, type, and device. Client log includes system log, config log, storage log and etc.

Step 4. Click Search. See Figure 7-2.

Note:
After log is successfully searched, you can click Export to export log.

</tbody>
</table>
| **Hotkeys** | **Hotkeys** | Set shortcut keys for common operations systems. Double click the column in the corresponding function of the hotkey, then set the hotkey function on the keyboard, click the Apply, modify the corresponding hotkey function.  
Click Reset to restore default software.  
Common operations include preview full-screen playback, playback module open, open the event module, open the System Configuration, open polling configuration program, open /close the round robin program, snapshot, lock, switch users to open / close linkage video, turn on / off video. |
| **File path** | **Pic path** | Set picture path. |
| | **Record path** | Set record path. |
| **Backup and Restore** | **Backup** | Click Backup to export the software configuration file. |
| | **Restore** | Click Restore, select the previously exported software configuration file, the software reverts to the time saved configuration. |

Step 3. Click Save.
9. User

9.1 Role Info

You can add, modify and delete role.

Step 1. In New tab, click User, see Figure 9-1.

![Figure 9-1](image)

Step 2. Click . See Figure 9-2.
Step 3. Set role name and fill in remark.
Step 4. Check menu right of the role, and select tab and set role channel right in Channel right area.
Note:
When user of the corresponding role logs in client, and in New tab it does not show non-allocated menu right, and in corresponding device tree it does not show non-allocated channel right.
Step 5. Click Save.
Note:
Admin has all rights which cannot be modified or deleted. After a role is added, you can modify its right or delete it.
Warning:
When you delete a role, users of this role will also be deleted.

9.2 User
You can add, modify and delete user.
Step 1. In New tab, click User. See Figure 9-3.
Step 2. Select role which you want to add user. See Figure 9-4.
Step 3. Set user parameter, see the following chart.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>Username which cannot repeat existing username.</td>
</tr>
<tr>
<td>Role</td>
<td>Select a role the user belongs. Different user permissions are for different roles.</td>
</tr>
<tr>
<td>Password</td>
<td>The user's password and confirm the password.</td>
</tr>
<tr>
<td>Confirm</td>
<td></td>
</tr>
<tr>
<td>Remark</td>
<td>Description of the user information.</td>
</tr>
<tr>
<td>Menu rights</td>
<td>According to the actual need select the user’s menu rights</td>
</tr>
<tr>
<td>Channel rights</td>
<td>According to the actual need select the user’s channel rights</td>
</tr>
</tbody>
</table>

Step 4. Click Save.

Note:
Admin has all rights which cannot be modified or deleted. After a role is added, you can modify its right or delete it.
10. Device Config

You can update software, connect to WEB, configure device camera, network, PTZ, event, storage, system and etc.

In New tab, click Device CFG, see Figure 10-1. Different devices may have different parameters, subject to actual device and manual.

**Figure 10-1**

</table>

### 11.2 Event Alarm Link Config

#### 11.2.1 Link Notice

After set link notice, when event occurs, it will alarm or alarm flash on map.

Step 1. In New tab, click Event CFG.

Step 2. Click device and select event type.

Step 3. Slide ⬅️ to turn on event, click Notify tab. See Figure 11-2.
Step 4. According to need, slide to enable alarm sound or map flash.

Step 5. Click Save.
   Click Copy to, you can link config of this camera to other device.

11.2.2 Link Video
After you link video, when corresponding event occurs, it will link corresponding camera preview or record.
Step 1. In New tab, click Event CFG.
Step 2. Click device and select event type.
Step 3. Slide , to enable event, and click Video tab. See Figure 11-3.
Step 4. Select video window, and double click camera you want to link, directly drag it into window.

Note:

On  
, you can set display mode.

Step 5. In camera list to be linked, set camera preset, link record or preview stream type, whether auto open video and enable record when event occurs, linked record or preview duration.

Note:

Click  
, you can delete camera.

Step 6. Click Save.
Click Copy to, you can copy camera link config to other devices.

### 11.2.3 Link Alarm Output
After you config link alarm output, when alarm occurs, it will link corresponding camera alarm output.

**Step 1.** In New tab, click Event CFG.
**Step 2.** Click device and select event type.

**Step 3.** Slide to enable event, and click Alarm Out tab. See Figure 11-4.

**Step 4.** Select alarm output of link camera and set whether to auto enable and duration.
**Step 5.** Click Save.

Click Copy to, you can copy camera link config to other devices.
11.2.4 Arm Time
Event is armed all-day by default. You can set arm time as needed.

Step 1. In New tab, click Event CFG.
Step 2. Click device and select event type.

Step 3. Slide to enable event and click Arm Time tab. See Figure 11-5.

Step 4. In corresponding day of week drag mouse to delete to add arm time. You also can click of each day of week to set arm time in pop-up box.

Step 5. Click Save.
Click Copy to, you can copy camera arm time config to other devices.
11.3 Event View

You can view the alarm event information, disable event sounds or disable alarm linkage pop video, pause refresh of event information.

In homepage, click or in New tab, select the Event, see Figure 11-6.

- In the Event interface you can view real-time alarm information, view up to 1000 latest messages, please search historical alarm message in log, see Ch 7.
- Select event, you can check Disable sound to disable the alarm sound for event; check Stop link video popup to prohibit pop-up video; check Stop refresh to pause refresh of event.
- Select event, click the Confirm, you can add a description to the event.
- After you handle event or confirm event, you cannot change the status of the event.

![Figure 11-6](image-url)
12. Video Wall

12.1 Video Wall

You can set video wall layout, live preview on wall, scheme and tour plus playback on wall.

In New tab, click Video Wall, see Figure 12-1.

<table>

</table>
|   | • Choose bound NVR device or device channel video wall in
12.2 Set Video Wall and Output

Condition
Decoder and video wall are connected successfully.

Steps
Step 1. Add decoder, see Ch 3.
Step 2. Set video wall layout.
	a) In video wall interface, click in pop-up box. See Figure 12-2.

Note:
Select multiple screens, click to add splicing screen; select splicing screens, click to cancel splicing screen; click to clear screen config.
b) In basic config interface, set video wall name, select Layout, and click in video wall, to add video wall layout.

  c) Click Next. See Figure 12-3.
d) Drag decoder into slot, to bind decoder and screen.
   
   Note:
   - Screen display, to show screen no., click Hide number to hide screen number.
   - If you want to cancel bound decoder slot, right click corresponding screen and select Cancel Binding.

   e) Check Apply Now to immediately use this config; click Finish to complete setup.
   
   Note:
   Check Apply Now, then return to video wall interface to enable this config.

Step 3. Preview channel video on wall.

   a) In Video Wall interface, click layout you want, and slide to enable video wall layout.
      
      See Figure 12-4.
      
      Note:

      In pop up box, select video wall layout, click to modify video wall layout, click to delete layout. See Figure 12-4.
Figure 12-4

b) Drag device channel into screen, bind channel and screen. Video of corresponding channel is played in the screen, and channel info will be show in Window Details area.

Note:
- Via window split, you can enable window in screen.
- When the device supports roaming, you can drag window randomly among all screens.
- When you drag NVR to the screen, then all channels of NVR are toured on video wall. You can view tour window channel info in Window Details area. You can set tour channel time span and stream type and preview channel video in Operation column, adjust channel order or delete channel.

12.3 Scheme Tour on Video Wall

Step 1. Add scheme.

a) Select video wall layout and bind channel.
b) Click . See Figure 12-5.

![Image of Add Plan dialog box]

Figure 12-5

Set scheme name, click Save. Repeat step a to c to add more schemes.

Step 2. Set scheme tour.

a) Click . See Figure 12-6.

![Image of Scheme Configuration]

Figure 12-6

b) Set time span and select scheme, click Add Scheme. Repeat this step to add more schemes.

Note:
You can adjust scheme order and delete scheme in Operation column.

c) Click Save.

Step 3. Click to enable scheme tour.
12.4 Playback on Video Wall

Playback device channel record on video wall.

Condition

- Complete video wall config.
- Record exists in device channel.

Steps

Step 1. Select screen with bound device channel, right click Video Wall>Playback on Video Wall. See Figure 12-7.

Step 2. Select record type and stream type, and set time.
Step 3. Click Search.
Step 4. Select record file, click to playback record.
13. People Count

You can search and export people count result, contrast by time and channel and export people count data.

Condition
- Enabled entrance/exit statistics function.
- Entrance/exit statistical data exists in device.

Steps
Step 1. In New tab, click People Count. See Figure 13-1.

Figure 13-1

Step 2. Select channel with people count data, and set time and period for search.

Note:
- You can search people count data by date, time, year or month.
- If you select multiple channel, then it will search data of these channels in search period.

Step 3. Click Search.
The system shows people count result in this period, see Figure 13-2.
Figure 13-2

a) Select statistical figure type, set filter to be Enter or Exit, and drag \( \square \) to enable contrast.

See Figure 13-3.
b) Set contrast type to Channel and select channel for contrast. This contrasts people count results of different channels within the same period. Set contrast type to Time and select time for contrast. This contrasts people count results of different periods for the same channel. System shows result.
14. **Heat Map**

You can search object moving accumulated density in device monitor image.

**Condition**
- Device has enabled heat map statistics.
- Heat map data exist in device.

**Steps**

Step 1. In New tab, click Heat Map. See Figure 14-1.

Step 2. Select camera with existing heat map data, and set search time and period.

   **Note:**
   You can search heat map data by date, period, or day of week.

Step 3. Click Search. System shows object moving accumulated density result of this period monitored by device.

   Click Export to export heat map date.
15. **PC-NVR**

After PC-NVR is added, you can manage disk, manage channel, set record plan and view version.

**Condition**
- PC-NVR is installed and running now.
- See Ch 3 to add PV-NVR.

15.1 **Disk Manager**

Step 1. In New tab, click PC-NVR.
Step 2. Select HDD tab, see Figure 15-1.

![Figure 15-1](image)

Step 3. Select record plan when HDD is full, and set disk space, click Allocate.

System pops up info box, click OK.

**Warning:**
Re-allocate disk space, system will delete all record files on the disk, be careful!

15.2 **Channel Management**
Set channel info to pass PC-NVR record plan.

Step 1. In New tab, click PC-NVR.

Step 2. Select Channel Management tab, see Figure 15-2.

![Figure 15-2]

Step 3. In device list select device channel, click ![select button]. System will add the selected device channel to list on the right.

Note:

- Click ![add button] to add device channel and shown in thumbnail, click ![add button] to add device channel and shown in list.
- If you delete unwanted device channel, check box in front of one device channel or check Selected channel to select all channels, click ![delete button] to delete.

Step 4. Click Save.

**15.3 Set Record Plan**

For the selected channel, set record schedule, motion detect, alarm, MD & alarm, or smart record plan.

Step 1. In New tab, click PC-NVR.

Step 2. Select Record Plan tab. See Figure 15-3.
Step 3. Select channel to set record plan, select stream type, set pre-record time and delay record time.

Step 4. Check record type, and select record time in corresponding day of week bar.

   Note:
   
   You can click next to each day of week bar, and in pop-up box set record type and period.

Step 5. Click Save.

   Note:
   - Click Copy to, and check device channel, you can copy the record plan in this channel to other device channel.
   - Click Default to restore default status of device channel record plan.

15.4 Version Info

You can view PC-NVR name, storage path and version.

Step 1. In New tab, click PC-NVR.

Step 2. Select Version tab, see Figure 15-4.
Step 1. Click at the lower-right corner of PC, select PC-NVR Setting. See Figure 15-5.
Step 2. Click \(\text{\textbullet}\) and enter port no. you want.

If you slide \(\text{\textbullet}\) to enable auto ON, after PC boots up, PC-NVR will be ON automatically.

Step 3. Click Save.

15.6 Modify Password

Step 1. Click \(\text{\textbullet}\) at the lower-right corner of PC, select Password Setting. See Figure 15-6.

![Password Setting](image)

**Figure 15-6**

Step 2. Enter original password, and enter new password, confirm new password.

Step 3. Click Save.

Note:

- This manual is for reference only. Slight difference may be found in the user interface.
