

256-channel Intelligent Video Surveillance Server

3U 16 HDD Network Video Recorder and Server

Wiz Mind

WizMind Series devices offer the full complement of Dahua Analytics+ functions for comprehensive, human-oriented analytic solutions. WizMind Series products deliver perimeter protection, vehicle and crowd density statistics, video metadata, and advanced people counting with heat map functionality. WizMind is ideal for complex applications with demanding requirements that need advanced analytic capabilities.

System Overview

The Dahua Intelligent Video Surveillance Server Series (IVSS) combines Deep Learning algorithms, a powerful Graphics Processing Unit (GPU), and an advanced Network Video Recorder (NVR) into an all-in-one Artificial Intelligence server. Dahua built the IVSS series from the ground-up as a dedicated AI surveillance server that eliminates the complications of browser updates, incompatible camera plug-ins, incompatible flash memory, and outdated Web technology.

The integrated GPU module and advanced deep learning algorithms perform powerful video structure analysis, achieve precision human facial analysis, and support 16 channels of real-time face recognition based on a database that stores up to 300,000 faces. In addition, IVS offers perimeter protection on 32 channels, a feature that can distinguish between human and vehicular objects as they cross a defined tripwire or enter/exit a specific area in the scene.

IVSS offers advanced features to customize the powerful Dahua Analytics for different applications. For example, facial feature filtering displays only those faces that meet target criteria and Stranger Mode detects a face not stored in the database and triggers an alarm, takes a snapshot, or records the face for further scrutiny. The IVSS is ideal for applications that require entrance/exit management, where knowing who is coming and going is a valuable asset.

Functions

Real-time Face Recognition

The IVSS7016DR-2I performs real-time facial recognition on up to 16 channels simultaneously. In addition to the 300,000 facial images, the IVSS database also stores names, birthdays, nationality, address, and ID information associated with each facial image. IVSS offers powerful and configurable database management features that can be applied to each face recognition channel independently.

- Intel Quad-core Processor
- Maximum 512 Mbps Incoming Bandwidth
- 256 IP Channel Video Access
- Facial Database Management, Stores up to 300,000 Faces
- Analytics+ Functions Facial Recognition on 16 Channels or Perimeter Protection on 32 Channels or a Combination of the Two (increased analytic channels available with additional modules)
- Stranger Mode to Detect Faces not Stored in Database
- Supports RAID 0/1/5/6/10
- SAS 3.0 for Storage Extension
- Three (3) HDMI and One (1) VGA Video Outputs
- Redundant Power
- Five-year Warranty*

Perimeter Protection

Dahua Analytics+ includes Tripwire and Intrusion functions that offer custom tripwires based on object type for automation in limited access areas. Perimeter Protection requires less pixels to detect an object to deliver improved accuracy and decreased false alarms due to lights, weather, trees, or animals.

Stranger Mode

IVSS supports two facial detection modes: Regular and Stranger. In Stranger mode, when IVSS detects a face not stored in the device's database, it can trigger an alarm, a buzzer, take a snapshot, or initiate recording. IVSS also incorporates a Similarity Threshold, where the server triggers an alarm for a face that does not match a minimum recognition level. The Stranger Mode and the Similarity Threshold are designed for critical infrastructure sites where access control is of vital importance.

Efficient Search

IVSS searches images by facial features to improve search efficiency. The server support uploading and storing 100,000 facial images for comparison with recorded faces. This search capability allows operators to quickly and easily search multiple channel recordings to determine when and where a person of interest appeared in a recording.

High Efficiency Video Coding (H.265)

The H.265 (ITU-T VCEG) video compression standard offers double the data compression ratio at the same level of video quality, or substantially improved video quality at the same bit rate, as compared to older video compression technologies. H.265 offers such impressive compression by expanding the pattern comparison and difference-coding, improving motion vector prediction and motion region merging, and incorporating an additional filtering step called sample-adaptive offset filtering.

1. The DHI-IVSS7016DR-2I ships with two (2) AIModule-IVSS modules, and each module processes a maximum of eight (8) facial recognition channels or a maximum of 16 perimeter protection channels, or some combination of the two functions. For example, if no channels are used for face recognition, then 16 channels are available for perimeter protection. If one (1) channel is used for face recognition, then 14 channels are available for perimeter protection, if two (2) channels of face recognition then 14 channels of perimeter protection are available, and so on.

Intelligent Video Server | DHI-IVSS7016DR-2I

Playback and Backup	
Multiple-Channel Playback	Maximum 16-channel Playback
Record Search	Video Detection Search, Manual Record, I/O Alarm, Intelligent Event, All Records
Storage Medium	Internal HDD SAS Disk Array Enclosure
Backup Method	HDD Peripheral USB Storage Device
Playback Function	Play, Pause, Stop, Fast Forward, Fast Backward, Reverse Play, Frame by Frame Play, Full-screen, Backup (clip/file), Snapshot, Digital Zoom, Audio On/Off
Storage	
Internal HDD	16 SAS/SATA 3.0 HDDs Up to 10 TB capacity for each Disk
HDD Mode	RAID 0/1/5/6/10
Alarms	
General Alarm	Motion Detection, Tampering, Local Alarm
Anomaly Alarm	IPC offline alarm, storage error, HDD full, IP conflict, MAC conflict, login lock, AI module temperature alarm, AI module offline, fan malfunction
Intelligent Alarm	Human face detection, human face recognition, perimeter protection (intrusion, tripwire), plate recognition
Alarm Linkage	Record, snapshot (full image), local external alarm output, IPC external alarm output, access and control, audio prompt, buzzer, log, preset, email
Auxiliary Interface
